NCT OF DELHI SOUTH DISTRICT

Motif

North West District

Coronation Park

Coronation Park is a park located on Burari Road near Nirankari Sarovar in Delhi, India. The park is sometimes referred to as the Coronation Memorial; it was the venue of the Delhi Durbar of 1877 when Queen Victoria was proclaimed the Empress of India. Later it was used to celebrate the accession of King Edward VII in 1903, and, finally, it was here that the Durbar commemorating the coronation of King George V as Emperor of India took place on 12 December 1911, subsequent to his coronation at Westminster Abbey in June 1911.

North District

Old Delhi Railway Station (station code DLI), is the oldest railway station of Delhi city and a Junction station. It was established near Chandni Chowk in 1864 when trains from Howrah, Calcutta started operating up to Delhi. Its present building was constructed by the British Indian government in the style of nearby red-coloured fort and opened in 1903. It has been an important railway station of the country, and preceded the New Delhi Railway Station by about 60 years.

Old Delhi Railway Station

North East District

The Shahdara Metro Station is located on the Red Line of the Delhi Metro. The 8.5 kms section between Shahdara and Tis Hazari was the first Delhi Metro section to become operational and was inaugurated on 24th December 2002 by Atal Behari Vajpayee, the Prime Minister of India. The first phase of the project was completed in 2006 within given budget and almost three years ahead of schedule.

First Metro Rail

East District

Akshardham is a Hindu temple complex in Delhi. Also referred to as Delhi Akshardham or Swaminarayan Akshardham. The complex displays millennia of traditional Hindu and Indian culture, spirituality, and architecture. The building was inspired and developed by Pramukh Swami Maharaj, the spiritual head of the Bochasanwasi Shri Aksh.

Akshardham Temple

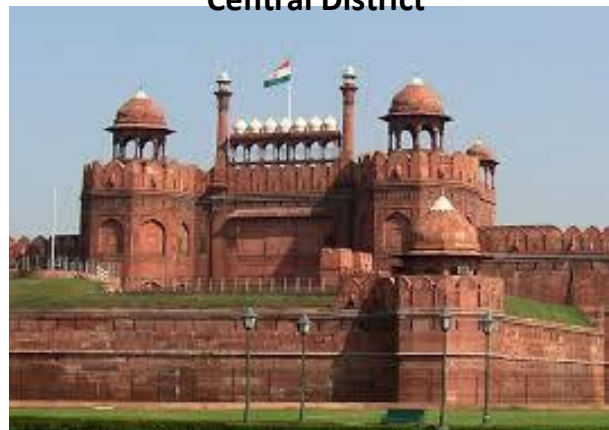

India Gate

New Delhi District

The India Gate, originally called the All India War Memorial, is a war memorial located astride the Rajpath, on the eastern edge of the 'ceremonial axis' of New Delhi, formerly called Kingsway. The names of some 70,000 Indian soldiers who died in World War I, in "France and Flanders, Mesopotamia, and Persia, East Africa, Gallipoli and elsewhere in the near and the far-east", between 1914–19, are inscribed on the memorial arch. In addition, the war memorial bears the names of some 12,516 Indian soldiers who died while serving in "India or the North- west Frontier and during the Third Afghan War"

Central District

The Red Fort was the residence of the Mughal emperors of India for nearly 200 years, until 1857. It is located in the centre of Delhi and houses a number of museums. In addition to accommodating the emperors and their households, it was the ceremonial and political center of Mughal government.

Red Fort

West District

Traffic Training Park

Traffic Training Park for children, a park where kids can learn road safety rules. The park has traffic signals and traffic police personnel to man the intersections. This is a special arrangement especially for tourists and students for education through recreation.

South West District

Indira Gandhi International Airport is the primary international airport of the National Capital Region of Delhi, India, situated in Palam, 15 km (9.3 mi) south-west of the New Delhi railway station and 16 km (9.9 mi) from New Delhi city centre. Named after Indira Gandhi, a former Prime Minister of India, it is the busiest airport in India. With the commencement of operations at the new Terminal 3, it became India's and South Asia's largest aviation hub, with a current capacity of handling more than 46 million passengers.

Indira Gandhi International Airport

South District

Lotus Temple

The Lotus Temple, located in New Delhi, India, is a Bahai House of Worship completed in 1986. Notable for its flower like shape, it serves as the Mother Temple of the Indian subcontinent and has become a prominent attraction in the city. The Lotus Temple has won numerous architectural awards and been featured in hundreds of newspaper and magazine articles.

Foreword

1. The District Census Handbook (DCHB) is an important publication of the Census Organization since 1951. It contains both Census and non Census data of urban and rural areas for each District. The Census data provide information on demographic and socio-economic characteristics of population at the lowest administrative unit i.e. of each Village and Town and ward of the District. The Primary Census Abstract (PCA) part of this publication contains Census data including data on household amenities collected during 1st.phase of the Census i.e. House Listing and Housing Census. The non Census data presented in the DCHB is in the form of Village Directory and Town Directory contain information on various infrastructure facilities available in the village and town viz; education, medical, drinking water, communication and transport, post and telegraph, electricity, banking, and other miscellaneous facilities. Later on, the Telegraph Services were closed by the Government of India on 15th. July, 2013. The data of DCHB are of considerable importance in the context of planning and development at the grass-root level.

2. In the 1961 Census, DCHB provided a descriptive account of the District, administrative statistics, Census tables and Village and Town Directory including Primary Census Abstract. This pattern was changed in 1971 Census and the DCHB was published in three parts: Part-A related to Village and Town Directory, Part-B to Village and Town PCA and Part-C comprised analytical report, administrative statistics, District Census tables and certain analytical tables based on PCA and amenity data in respect of Villages. The 1981 Census DCHB was published in two parts: Part-A contained Village and Town Directory and Part-B the PCA of Village and Town including the SCs and STs PCA up to Tahsil/Town levels. New features along with restructuring of the formats of Village and Town Directory were added. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent Village, the distance in broad ranges from the nearest place having such an amenity, was given.

3. The pattern of 1981 Census was followed by and large for the DCHB of 1991 Census except the format of PCA. It was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 Census. In addition, sex wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 Census. One of the important innovations in the 1991 Census was the Community Development Block (CD Block) level presentation of Village Directory and PCA data instead of the traditional Tahsil/Taluk/PS level presentation.

4. As regards DCHB of 2001 Census, the scope of Village Directory was improved by including some other amenities like banking, recreational and cultural facilities, newspapers & magazines and 'most important commodity' manufactured in a Village in addition to prescribed facilities of earlier Censuses. In Town Directory, the statement on Slums was modified and its coverage was enlarged by including details on all slums instead of 'notified slums'.

5. The scope and coverage of Village Directory of 2011 DCHB has been widened by including a number of new amenities in addition to those of 2001. These newly added amenities are: Pre-Primary School, Engineering College, Medical College, Management Institute, Polytechnic, Non-formal Training Centre, Special School for Disabled, Community Health Centre, Veterinary Hospital,

Mobile Health Clinic, Medical Practitioner with MBBS Degree, Medical Practitioner with no degree, Traditional Practitioner and faith Healer, Medicine Shop, Community Toilet, Rural Sanitary Mart or Sanitary Hardware Outlet in the Village, Community Bio-gas, Sub Post Office, Village Pin Code, Public Call Office, Mobile Phone Coverage, Internet Cafes/Common Service Centre, Private Courier Facility, Auto/Modified Autos, Taxis and Vans, Tractors, Cycle-pulled Rickshaws, Carts driven by Animals, Village connected to National Highway, State Highway, Major District Road, and Other District Road, Availability of Water Bounded Macadam Roads in Village, ATM, Self-Help Group, Public Distribution System(PDS) Shop, Mandis/Regular Market, Weekly Haat, Agricultural Marketing Society, Nutritional Centers (ICDS), Anganwadi Centre, ASHA (Accredited Social Health Activist), Sports Field, Public Library, Public Reading Room, Assembly Polling station, Birth & Death Registration Office. In the Town Directory, seven Statements containing the details and the data of each Town have been presented viz.; (i)-Status and Growth History of Towns, (ii)- Physical Aspects and Location of Towns, (iii)-Civic and other Amenities, (iv)-Medical Facilities, (v)-Educational, Recreational & Cultural Facilities, (vi)- Industry & Banking, and (vii)- Civic & other amenities in Slums respectively. CD Block wise data of Village Directory and Village PCA have been presented in DCHB of 2011 Census as presented in earlier Census.

6. The data of DCHB 2011 Census have been presented in two parts, Part-A contains Village and Town Directory and Part-B contains Village and Town wise Primary Census Abstract. Both the Parts have been published in separate volumes in 2011 Census.

7. The Village and Town level amenities data have been collected, compiled and computerized under the supervision of Ms. Varsha Joshi, Director of Census Operation, Delhi. The task of Planning, Designing and Co-ordination of this publication was carried out by Dr. Pratibha Kumari, Assistant Registrar General (SS) under the guidance & supervision of Dr. R.C.Sethi, Ex-Addl. RGI and Shri Deepak Rastogi present Addl. RGI. Shri A.P. Singh, Deputy Registrar General, (Map) provided the technical guidance in the preparation of maps. Shri A.K. Arora, Joint Director of Data Processing Division under the overall supervision of Shri M.S.Thapa, Addl. Director (EDP) provided full cooperation in preparation of record structure for digitization and validity checking of Village and Town Directory data and the programme for the generation of Village Directory and Town Directory including various analytical inset tables as well as Primary Census Abstract (PCA). The work of preparation of DCHB, 2011 Census has been monitored in the Social Studies Division. I am thankful to all of them and others who have contributed to bring out this publication in time.

(C. Chandramouli)

Registrar General &
Census Commissioner, India

New Delhi, Dated:-16-06-2014

Preface

District Census Handbook provides the census as well as non-census data at micro level for each village and town within a district that is collected and compiled in decadal censuses. The District Census Handbook for 2011 is organized in two Parts. Part A covers the CD block wise village level amenities data for all villages along with civic and other amenities data of every town within a district. Part B gives the census data in the form of Primary Census Abstract at village level of each CD block and ward level of each town within the district. This time the two Parts are released in two separate volumes. DCHB contains the salient results based on the data collected at the actual head-count and in addition, provides a fund of other non-census information in respect of Villages and Towns of the nine districts of the N.C.T. of Delhi as per jurisdiction of Census-2011. As regards the historical background, scope and coverage of the District Census Handbook it has been explained at length by The Registrar General and Census Commissioner, Indian the 'Foreword' to this publication.

The design for the 2011 DCHB was evolved centrally by the Office of the Registrar General and Census Commissioner, India. This Directorate undertook the role of managing census operation, 2011 for NCT Delhi simultaneously with collection of non-census data in the form of Village Directory and Town Directory. This Directorate managed the Census operations, 2011 followed by compilation of results, scrutiny, finalization of all census related data that is released in the form of Primary Census Abstract, 2011 providing information on Area, Household, Population, composition of population by Male Female, 0-6 age, Scheduled Castes/Scheduled Tribes, Literates, Workers and category of workers. The findings of first phase of census operations i.e. 'House listing and Housing Census' is also presented in Part B of this publication in nine Tables. Simultaneously the Directorate also collected the village level data with regard to Area, Educational facilities, Medical facilities, Water and Sanitation, Communication, Transport facilities and connectivity, Banks, Credit and other miscellaneous facilities, Electricity and other Power/Fuel availability, Land Utilization and Irrigation, Main Agricultural commodities, manufacturers and handicrafts as on 31.12.2009 from respective revenue officials. The data of town son Status and Growth History, Physical aspects and location, Civic and other amenities, Medical facilities, Educational, Recreational and Cultural facilities, Industry and Banking, Civic and other amenities in Slums was collected from respective town authority.

The officials at various levels of different departments of the State Government extended full cooperation throughout the operation. Most of the data supplied by revenue and town officers for village and town directory were cross-checked with the data procured from various state departments and an attempt was made to reconcile the discrepancies wherever possible.

I am deeply grateful to Dr. C. Chandramouli, I.A.S., the Registrar General and Census Commissioner, India who has been a perennial source of inspiration and encouragement throughout the process in preparation of this document. The data presented in this Handbook has been collected and compiled under his direction and guidance. I express my thanks to Dr. Pratibha Kumari, ARG (SS) of the Social Studies Division and Dr. A.P. Singh, Deputy Registrar General of the Map Division, Office of the Registrar General, India for their valuable guidance in this project. I also thank Shri Anil Kumar Arora, Joint Director of Data Processing Division, who provided the record structure for computerization of village and town

directory data and the software program for the generation of Primary Census Abstract, village directory, town directory statements and inset tables. I am also thankful to the related team of officers and officials of the Office of the Registrar General, India, for their support in bringing out this publication.

I place on record my special appreciation for Sh.G.C. Joshi, Deputy Director of Census Operations, Delhi who took painstaking efforts in giving shape to this document. He remained closely associated with the entire process and very efficiently and effectively monitored every aspect of the work in the DCHB and Map Section at every stage. He has done a highly commendable work in the spheres of planning and coordination, reconciliation of the data, drafting and editing/improving of the document. The DCHB Cell meticulously scrutinized the non-census data collected from various sources, finalized the list of villages, towns, etc., under the able guidance of Sh. G. C. Joshi.

Sh. R. N. Chhipa, Research Officer and Dr Nitesh Parashar, Senior Geographer efficiently managed the timely preparation of the various maps incorporated in this publication.

The list of officials of this Directorate who were closely associated with this work is given separately in the 'Acknowledgements'. I hope that the data presented in this Handbook meet the ever increasing demand for micro-level data in this era of planned development.

Dated: - 03-12-2014

Varsha Joshi,
Director of Census Operations, Delhi.

HISTORY AND SCOPE OF THE DISTRICT CENSUS HANDBOOK

The need of data at the grass root level for the administrative and planning purposes at sub micro level as well as academic studies prompted the innovation of District Census Handbook. District Census Handbook is a unique publication from the Census organization, which provides most authentic details of census and non-census information from village and town level to district level. The District Census Handbook was firstly introduced during the 1951 Census. It contains both census and non-census data of urban as well as rural areas for each district. The census data contain several demographic and socio-economic characteristics of the lowest administrative unit i.e. of each village and town and ward of the district. The non-census data comprise of data on availability of various civic amenities and infrastructural facilities etc. at the town and village level, which constitute Village Directory and Town Directory part of the DCHB. The data of DCHB are of considerable importance in the context of planning and development at grass-root level.

In 1961 census DCHB provided a descriptive account of the district, administrative statistics, census tables and village and town directory including Primary Census Abstract. This pattern was changed in 1971 Census and the DCHB was published in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. In 1981 census, DCHB was published in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsils/town levels. New features along with restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given.

The pattern of 1981 census was followed by and large for the DCHB of 1991 Census except the format of PCA. It was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD Block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation.

As regards DCHB of 2001 Census, the scope of Village Directory was improved by including some other amenities like banking, recreational and cultural facilities, newspapers & magazines and 'most important commodity' manufactured in a village in addition to prescribed facilities of earlier censuses. In Town Directory, the statement on Slums was modified and its coverage was enlarged by including details on all slums instead of 'notified slums'.

The scope and coverage of Village Directory of 2011 DCHB has been widened by including a number of new amenities in addition to those of 2001. In the Town Directory, seven Statements containing the details and the data of each town have been presented viz.:(i)-Status and Growth History of towns,(ii)-Physical Aspects and Location of Towns,(iii)-Civic and other Amenities,(iv)-Medical Facilities,(v)-Educational, Recreational & Cultural Facilities,(vi)-Industry & Banking, and (vii)-Civic & other amenities in Slums respectively. CD Block wise data of Village Directory and Village PCA have been presented in DCHB of 2011 census as presented in earlier census. The data of DCHB 2011 Census have been presented in two parts, Part-A contains Village and Town Directory and Part-B contains Village and Town wise Primary Census Abstract. Both the Parts have been published in separate volumes in 2011 Census.

Brief History of District

Delhi is an ancient and historic city of India. However, the origin of its name is lost in antiquity. Delhi by tradition traces its history to the Mahabharata, the tale of epic war fought nearly 3000 years ago between estranged cousins, the Kauravas and the Pandavas, for the legendary city of Indraprastha. The Mahabharata speaks about a city called Indraprastha which was built along the banks of river Yamuna in the area lying between the present Feroze Shah Kotla and Humayun Tomb. But there is no direct evidence to identify this city with that of Delhi. A.D. Ptolemy, the famous Geographer, who visited India during the second century A.D. has, in a map, mentioned a place known as Daidala located close to Indraprastha and midway between present Mathura and Thanesar. However, there is no mention of any city called Indraprastha or Delhi in any of the works of the Greek writers on the conquests of Alexander the Great, who invaded India in 326 B.C. Even the Chinese pilgrim Huiyen Tsang does not make any mention of the city in his Memoirs. According to one school of thought accepted by Lord Cunningham, Delhi derived its name from Raja Dhilu or Dhillu whose period of reign is not definitely known. According to another school of thought supported by an inscription in village Sarban in Delhi, Dilly was founded by Tomaras, the Tunvar Rajputs. Lying at the strategic entrance of the fertile Indo-Gangetic plain, one of the great centres of human civilization for whose possession invaders of the north from Caucasus to Mongolia have braved the high mountain passes of the Himalayas for millennia, Delhi has for long centuries been the seat of power and she has witnessed the passing of many dynasties and mighty empires. In the 11th century, Tomara ruler Anangpal built a fort in Delhi and ruled from here. At the end of the 12th century, Delhi changed hands and passed into the hands of Muslim conquerors. Mighty empires have risen and fallen in Delhi countless times and at least seven cities, monumental gifts to posterity, still survive. It is customary to speak of these seven cities of Delhi though actually there are about 15 sites, not built layer upon layer, but contiguously.

LalKot, the first city of Delhi, was built about 1060 A.D. by the Hindu Tomara King Anangpal. This was enlarged by the most celebrated Rajput King Prithviraj Chauhan and the fort renamed as Qila Rai Pithora. The first Muslim King of Delhi Qutb-ud-din-Aibak built Delhi's first mosque Quwwat-ul-Islam on the side of the Hindu fort and laid the foundation of the Qutb Minar close by. Siri, the second city of Delhi was built by Alauddin-Khalji in the early part of the 14th century. The city's water needs were met by the vast reservoir of Hauz Khas. Ghiyas-ud-din Tughluq, who seized power in 1320, built Tughluqabad, the third city, whose massive ruins still speak of its pristine splendour. Ghiyas-ud-din's son, Muhammad Shah, built his own capital at Jahanpanah, the fourth city, but soon abandoned it and drove out the luckless inhabitants to Daulatabad in the Deccan, 1120 Kms., away. Muhammad Shah, a brilliant and eccentric ruler, was in many respects an innovator far ahead of his times. He decreed the use of copper coins which could be exchanged at the state treasury for gold, an experiment which soon failed but can even now be seen as a forerunner to the modern currency system. The move to the Deccan was also unsuccessful and Delhi resumed its role as the capital. Firozabad, the fifth city, was built along the banks of river Yamuna by Firoz Shah Tughluq who succeeded Muhammad Shah in 1351. Contemporary accounts speak of this city as thriving and prosperous and Firoz Shah's reign as enlightened and an era of peace and good governance. The death of Firoz Shah was followed by a civil war among his descendants.

The governors of many provinces became independent kings and ultimately only a small area around Delhi remained in the hands of the Tughluq Sultans. The crumbling walls of Firoz Shah Kotla and the Ashoka Pillar today mark the ruins of this city. The Sayyid and Lodi dynasties, which followed the Tughluqs, built many mosques and monuments, including the one now known as Lodi Gardens. They did not, however, build any new city. In 1504, Sultan Sikander Lodi shifted his court to Agra, 170 Kms. down the river Yamuna, and until the 17th century, Agra and Delhi alternated as the capital.

The celebrated Mughal dynasty began its rule with Babar's historic victory at the Battle of Panipat in 1526. Babar's son, Humayun, built a fort named Dinpanah on the site of the legendary Indraprastha. The Afghan, Sher Shah Suri, who drove out Humayun for a brief period, fortified the Purana Qila and named this city as Shergarh. Kabuli Darwaza, the North Gate and Lal Darwaza, the Southern Gate, are the only remains of this city today. Humayun regained his throne in 1555 but died soon. He was interred in the first monumental garden tomb of the Mughal era, now called Humayun Tomb, which was built by his widow Haji Begum and considered to be a precursor to the Taj Mahal. Humayun's son Akbar, who had his capital at Agra initially, shifted his capital to Fatehpur Sikri, 22 Kms., from Agra, for a few years. This city, though deserted now, spectacularly displays the architectural synthesis of Hindu and Muslim styles, a union close to Akbar's heart. Akbar enlarged and consolidated the Mughal Empire and provided a good starting point for his successor Jahangir and for the two later rulers Shahjahan and Aurangzeb. Jahangir's reign was on the whole quiet as compared to later Mughal rulers. Jahangir had Agra as his capital. Akbar's grandson, Shahjahan, moved the capital back to Delhi in 1638 and built the splendour city of Shahjahanabad, the seventh Delhi, which is now a living and thriving city, existing side by side with New Delhi. Its monuments still speak volumes of their glorious past and continue to inspire as in their builders' time - the massive ramparts of Lal Qila (Red Fort) with its courts and palaces, the magnificent Jama Masjid, the bustling Chandni Chowk and the many narrow lanes in which several hundred thousand people live, marry, pray and work. In 1739, Nadir Shah, the Emperor of Persia, defeated the weak and meek Emperor Muhammad Shah, massacred the inhabitants and carried away the booty that included the fabled peacock throne, the Kohinoor Diamond, vast quantities of gold and jewels as well as the city's peerless craftsmen. From then onwards, Delhi headed towards its decline. In 1803, the city changed hands and came into the fold of the British with the installation of a British Resident as 'Protector' of Mughal Crown. Following the uprising of 1857, the last of the Mughal rulers, King Bahadur Shah Zafar, the old and the blind poet, was deported and lodged in a Burmese prison and his sons and grandsons were neutralized by the British. For long, Calcutta remained the capital of the British India. It was shifted to Delhi in 1911. A new city, viz., New Delhi, was built subsequently. The Noble Square, the great Secretariat and the high-domed Viceregal Palace, all symbols of the British legacy, which form part of the present New Delhi, stand testimony to the march of history. The city of New Delhi, now grown to a sprawling modern metropolis, many times its original conception, is the seat of the Government of the Republic of India. Today, Delhi is as vibrant as its glorious past. Delhi, known for open air cafes, Yoga Ashrams, advanced technological institutions and red-brick Universities, towers of float glass and high rise concrete buildings, fortune-telling parakeets, sleek cars winding their way past horse-drawn 'tongas' and sputtering auto-rickshaws, crowded cafes surcharged with heady poetry recited with emotions, or vociferous arguments on politics, is a melting pot of ideas, fashions and lifestyles. In essence, Delhi is India in microcosm, of its history, its people, its

culture and its future. The District of Delhi was first constituted in 1819 which included two parganas of the north and south with the city at the centre. In 1861, Sonapat Tahsil, which was then a part of Panipat district, was transferred to Delhi district. At that time, Delhi district consisted of three Tahsils, viz., Delhi, Ballabgarh and Sonapat. Following the transfer of the capital from Calcutta to Delhi in 1911, Sonapat Tahsil was transferred to Rohtak district (now in Haryana) and a greater part of Ballabgarh Tahsil to Gurgaon district (also now in Haryana). Thus, Delhi District comprised the then Delhi Tahsil and the remaining portion of Ballabgarh Tahsil. Shahdara town and some villages across river Yamuna, which were till then a part of Ghaziabad Tahsil of Meerut district (Uttar Pradesh), were added to Delhi district in 1915. The province of Delhi thus consisted of one district and one Tahsil. The province of Delhi acquired the Part C State status following the adoption of the Constitution of India. A Legislative Assembly was set up in 1952 which continued till November 1, 1956 when the Central Administration was reintroduced in Delhi. In 1966, a Metropolitan Council was set up in Delhi, which is still continuing. The only Tahsil of Delhi of 1961 was bifurcated into two, viz., Delhi and Mehrauli, during 1961-71 and it remained as such upto 1981-91. Following the passage of the Sixty Ninth Amendment to the Constitution of India in 1991, the nomenclature of the Union Territory of Delhi was changed as National Capital Territory of Delhi w.e.f. February 1, 1992. Subsequently, the administrative set up of the NCT of Delhi also changed. In 1997, NCT of Delhi was decentralised and nine districts were formed with three tahsils under each district. At present, there are 112 villages in the rural area and 113 towns (3 Statutory Towns and 110 Census Towns) in the urban area of the NCT of Delhi.

Till 1991 Census, the statutory towns were divided into Census Charges by the Census Directorate but in 2001, the concept of wards was adopted for two statutory towns, viz., Delhi Municipal Corporation (DMC) and Delhi Cantonment (Delhi Cantt.). However, the concept of charge was continued in respect of NDMC. The concept adopted in 2001 has continued in census 2011 also. The statutory town DMC is spread over in all the nine districts while the statutory town NDMC is spread over in four districts. The Delhi Cantonment Board is the only statutory town which falls in only one district. Apart from this, some wards of the towns are also spread over in different districts/tahsils, which has led to a peculiar situation, particularly for data compilation work at town/ward level.

ANALYTICAL NOTE

10 (i) Physical Features

Although, the NCT of Delhi has been divided into nine districts, single DCHB is published for all nine districts in two volumes i.e. Part-A- Village and Town Directory and Part-B- Primary Census Abstract (PCA). In the physical features, major characteristic in respect of N.C.T. Delhi as a whole is presented. As regards location and size, NCT of Delhi with an area of 1483 Sq. Kms., is situated between the Himalayas and Aravalli ranges in the heart of the Indian sub-continent. It lies between latitude 28 degree 25 minutes to 28 degree 53 minutes North and longitude 76 degree 50 minutes to 77 degree 22 minutes East . It ranks 30th amongst all the States and Union Territories in terms of geographical area and as such, is larger than Pondicherry, Dadra & Nagar Haveli, Lakshadweep, Daman and Diu and Chandigarh. It is surrounded on three sides by two States, i.e., on North West and South by Haryana and in the East across the river Yamuna by Uttar Pradesh. Its greatest length is around 53 Kms., and the greatest breadth is 48 Kms. Physiographically, Delhi's altitude ranges between 213 and 305 metres above sea level. The general slope of the land is from north to south. The NCT of Delhi can be divided into three segments, viz., the Yamuna Flood and Piedmont Plains, the Ridge and the Plains. The Yamuna Flood Plains is somewhat low- laying and sandy and is subject to recurrent floods. This area is also called "Khadar". During the rainy season; the flood water inundates this region. After the flood subsides, the moisture in the soil last for quite some time making the land more fertile. The ridge constitutes the most dominating physiographic feature of this territory. Originating from the Aravalli Hills of Rajasthan and entering Delhi from the south, it extends in a north-eastern direction. It encircles the city on the North West and west. The point near Bhati Village has a height of 322 meters (approx.). Tughlabad Fort is located on one of the highest spurs of the ridge.

The slope of the land varies in trains Yamuna area and the southern part of the territory. In trans- Yamuna area, the slope is from north to south. It is from east to west in the southern part of the territory. One of the important physical features of the area is the ridge, the last spur thrown out by the Aravalli hills towards the plains of northern India. The ridge almost reaches the bank of Yamuna river at Wazirabad, then runs parallel to the river encircling the walled city and extends towards Qutab and Mehrauli, where it throws out numerous branches, some of which extends towards Gurgaon district (Haryana) and others push eastward again towards the river Yamuna. The low lying land along the river Yamuna is called "khaddar" and the tract lying to the north of the ridge and west of the grand Trunk Road which separates it from the Khadar is level Plain and is called "Bangar". The rain water in bangar is drained by Najafgarh drain and West Mungesh pur drain. Western parts of the territory. In most part of the territory, the water table is high. It is, however, low in the areas adjacent to the Aravalli outcrops. The water table in east and north-east of Mehrauli ranges from 15 to 20 metres below ground level. The whole space between the river Yamuna and the ridge, which is triangular in shape with its apex at Wazirabad and the base extending between Tughlaqabad and Mehrauli, has been the site of various cities and bears the name "Khandrat" (ruins). Historians claim that within this small triangular piece, at least eight different cities existed at different times of Indian History. The southern portion of land near Mehrauli and Tughlabad is known as "Kohi" (hilly). Leaving aside the Yamuna flood plains (khaddar) and the Ridge, the entire area of the NCT of Delhi is categorized as "Banagar" or the plains. A major portion of the area of NCT of Delhi is plain and on this, Delhi, New Delhi and Delhi Cantonment along with a vast stretch of numerous villages are located. The land of the plains is mostly fertile.

Climate

The climate of Delhi is hot and humid during most of the months in a year. The climate is mainly influenced by its location and continental air prevailing over most part of the year. The mean daily temperature varies from minimum of 8.9° C in January (winter) to 40.9° C in May (summer). The climate of Delhi can be classified into four seasons. The cold season starts in late November and extends upto March. This is followed by hot season which lasts till June. The monsoon starts in June and continues up to the end of September. The intervening period can be termed as the transition period of seasons. Winds are generally light during the post-monsoon and winter months and are stronger during the summer. Except during the monsoon months, winds predominantly take the Westerly or North-Westerly direction and tend to be more Northerly in the afternoons. Easterly and South- Easterly winds are more common in the monsoon months. The average annual rainfall is 617 mm., and about 75 per cent of it occurs during the monsoon. The rainfall progresses from South-West to North-East and isolated squalls also take place. The isohyet of 600 mm., surrounds Yamuna Khadar in the eastern part while the western part shows the isohyet of 300 mm. (Source: Statistical Abstract 2010)

Forest

The area under forest is 176.20 sq. km as on 31st March, 2011 which is very low as compared to the total area of NCT of Delhi. The greater portion of reserved forest of NCT of Delhi is located in New Delhi ridge which lies opposite Rashtrapati Bhawan at the back side of Birla Mandir. The permanent vegetation of this ridge mostly comprises tree species, which are thorny, and a few shrub species.

Minerals and Mines

Delhi does not have minerals of economic importance except for some building and road making material and some china clay deposits. The building and road making material comprises sand, stone and bajri. The quartzite rock available in the ridge is very useful in building construction and in the manufacture of stone-wares. Kaolin is used as a principal raw material by refractory industries and fire clay for brick manufacture and china-ware. The china clay mines are located in the southern parts of Delhi. Quarrying of sand is done at Okhla and Badarpur. Some quantity of china clay is also sent to other neighboring states.

Soil

The soils of NCT of Delhi are generally of medium fertility. The soil formation is influenced by river Yamuna, the ridge and the south-westerly winds. The clay content generally varies from place to place and salinity is a great problem in the soil of the territory. The structure is mainly grained or weakly developed granular. They are sandy sloam in texture and they become slightly heavier with depth. The southern part of Delhi is formed of quartzite or sandstone and the alluvium brought by small streams.

Land and Land Use Pattern

Following statement reveals total area and the utilization of land in Delhi during the period from 2011-2012. The population of NCT of Delhi is engaged predominantly in non-agricultural pursuits. Area not available for Cultivation was 90875 hectares, Other Uncultivated land excluding fallow Land was 11144 hectares, Fallow land 19234 hectares, Net area sown was 22885 hectares ,

Area sown more than once 13560 hectares, Total Cropped Area 36445 hectares and land under forest area was 9453 hectares in 2011-2012.

Sl. No.	Area according to Village Papers (Excluding Forest Area)	Area not available for Cultivation	Other Uncultivated land excluding fallow Land	Fallow land	Net area sown	Area sown more than once	Total Cropped Area	Forest
Area (in Hectare)	147488	90875	11144	19234	22885	13560	36445	9453

Agriculture

The important crops grown in NCT of Delhi are Wheat, Gram, Bajra and Jowar. Production of wheat was 82142 metric ton, jowar was 30328 metric ton, paddy was 30297, bajra 2689, maize 834 metric ton among cereals in 2011-2012. The production of potatoes was 14928 metric ton and Sugar cane 226 metric ton in 2011-2012.

Irrigation

The important sources of irrigation are Tube Wells, Wells and Canals. Area irrigated by wells/tube wells was 19561 hectares, area irrigate by canals was 2225 hectares and 980 hectare area was irrigated by other sources. Net irrigated area was 22766 hectare in 2011-2012.

Animal Husbandry and Fishery

As in the other parts of country, animal husbandry plays a significant role in the economy of Delhi. The animals provide necessary help in agriculture, trade, commerce, and transportation. According to Delhi statistical handbook 2013 the total Livestock in delhi was 423319, total Cattle were 107730, total Buffaloes 266626, Sheep 5896, Goats 21176, Horses and Ponies 393, Pigs 21019, Camel 10, Other Livestock 369, Poultry 49550 of which 25.45 per cent were cattle. Buffaloes, which constituted 62.98 per cent of total livestock, were the main source of milk. Pigs and goats respectively comprised 4.97 and 5.0 per cent of total livestock, which were the main sources of meat. Fisheries in Delhi flourish in river Yamuna, its flood channels, and the three canals, i.e., portion of Agra canal, Hindon canal and Western Yamuna canal. The consumption of fish in Delhi is more than its production. Fish is imported from the neighbouring States of Haryana, Rajasthan and Punjab.

Industry

Delhi has remained the seat of several Emperors. It has always attracted skilled craftsmen who found the court of the Emperors and the attending nobility a ready market for the articles manufactured by them. Delhi had a rich heritage of skilled craftsmen. The various rulers, known for their high aesthetic tastes, patronized the industries producing articles of luxury and decor. It is said

that Mohd. Bin Tughlaq, during his reign, had employed as many as 500 expert weavers in Delhi for the manufacture of silk and brocades for the ladies of his court and for presentation to others. The various industries, arts and crafts had an excellent role to play during the reign of the Mughal Emperors. Ain-e-Akbari refers to the presence of skilled workers as part of the establishment of Emperors. The famous French traveller Bernier refers to the existence of embroiders, goldsmiths, painters, varnishers, joiners, turners, tailors and shoe-makers, manufacturers of silk, brocades and fine muslin in India, at the time of his visit to this country. In his book 'Art manufacturers of India', published in 1888, Shri T.N.Mukherjee, mentions that Delhi was one of the principal seats of the manufacture of slippers for ladies. He also refers to the embroidered shoes that were prepared by using gold and silver wire. According to Shri Mukherjee, Delhi exported shoes worth four lakhs of rupees in 1864. From the olden days, Delhi is well known for arts, crafts and industries like jewellery, embroidery, silver vases, bowls and tea sets, ornamental jewel boxes made of brass, silk and silk embroidery, ivory carvings, handloom textiles and copper and brass utensils. The present industrial growth of Delhi can be traced to the later half of the 19th century when three iron foundries and engineering works were established here. Installation of two cotton weaving and spinning mills marked the establishment of Textile Industry in Delhi. The first ice factory was set up in 1907 and the first flour mill in 1917. The first match factory was set up in 1931, the first oil mill in 1932 and the first acid factory in 1934. The two World Wars greatly helped expansion of industries in Delhi. The partition of the country gave further impetus to the industries.

Delhi has emerged as a key redistribution centre due to its strategic geographical location and infrastructure. The wholesale markets in Delhi deal in 27 key commodities consisting of textiles, auto parts and machinery, stationery, food items, and iron and steel, as per the Master Plan document 2021 of DDA. The trade and commerce segment in Delhi is also vital due to its substantial contribution in terms of tax revenues and employment generation. According to the Economic Survey of Delhi FY13, there are 29 approved industrial areas and five flatland factory complexes in Delhi. Further, 22 non-confirming industrial clusters have been informed for development. Delhi State Industrial Infrastructure Development Corporation (DSIIDC) is the agency for development, operation, and maintenance of all industrial estates in Delhi.

Industrial Estate Currently, Delhi has 32 planned Industrial Estates and flatted factory complexes. Out of these, 21 Industrial Estates are under Delhi Development Authority (DDA) and the rest are under DSIIDC and Industry Department Working factories. The number of working factories in Delhi grew from 7,921 in 2008 to 8,557 in 2012. Similarly, the estimated workers employed in these factories grew from 364,053 in 2008 to 392,270 in 2012. On an average, 46 persons work in each factory in Delhi. The estimated employment showed no substantial improvement during FY09-FY11 because of the closing of many polluting industries in Delhi. The industries that provided higher level of employment during 2012 include textile products followed by metal products and parts of machinery and transport equipment, repair of capital goods, and repairs services, paper and paper products, food products, rubber, plastic, petroleum, coal products, leather and leather fur products, chemical and chemical products, and misc. items.

Status of Industrial Areas in Delhi

Annual Survey of Industries: The number of registered factories in Delhi declined from 3,413 in FY03 to 2,878 in FY11. During the same period, the production capital increased from ` 60.5 bn to 126.9 bn. The number of employees declined from 0.13 mn in FY03 to 0.12 mn in FY11.

Trade and Commerce

Trade and commerce have played a pivotal role in shaping the development of Delhi's economy by making a significant contribution in terms of tax revenues and providing gainful employment. Delhi is the biggest consumption centre in North India. It has attained the status of a major distribution centre by virtue of its geographical location and other historical factors. That it is a major distribution centre is borne out by the fact that 49% of fuel oil, 47% of food- grains, 44% of iron and steel and 78% of fruits and vegetables imported into Delhi are re-exported (Source: NCR Planning Board). The wholesale markets in Delhi deal with about 27 major commodities, covering textiles, auto parts and machinery, stationery, food items and iron and steel (Master Plan document 2001 of DDA).

Delhi is one of the largest trade and consumption centre in North India. Delhi has a large presence of textile manufacturers followed by metal products and parts, machinery and transport, equipment-machine tools including electrical appliances, paper and paper products, rubber, plastic, petroleum, coal products, basic metal and alloy industry, repair of capital goods, and repair services among others. As Delhi is a metropolis and the capital of the country, it focuses on promoting hi-tech, sophisticated, export oriented, small-scale industries.

The following are some of the prominent public sector undertakings (PSUs) in Delhi:

1. Delhi Transport Corporation, New Delhi
2. Housing and Urban Development Corporation Ltd.
3. HUDCO Bhawan, New Delhi
4. Indian Renewable Energy Development Agency Limited (A GoI Enterprise), New Delhi
5. Mahanagar Telephone Nigam Ltd, New Delhi
6. Indraprastha Gas Ltd, New Delhi
7. Intelligent Communications Systems India Ltd, New Delhi

Some power plants such as Badarpur Thermal Power Station and Rajghat Power Station are also managed by the Public Sector in Delhi.

Transport

Delhi is a centre of both national as well as international importance in respect to transport. Delhi is known for its important road links with different parts of the country even from the olden days. The Grand Trunk Road, which is a National Highway of great importance, passes through Delhi. The Mughals had played a great role in developing the transport system. Later on, East India Company improved the same. Two categories of vehicles and conveyance are used by passengers in Delhi. Fast moving vehicles like motor cycle, auto rickshaw, scooter, taxi, car, bus, etc., fall under the first category. Slow moving vehicles such as tanga, cycle rickshaw, rehra, bullock cart, etc., fall under the second category.

Delhi Transport Corporation (DTC) is the main public transport operator of Delhi. DTC is one of the premier bus services of North India. It connects almost all the major centers of North India With its services. It connects Uttar Pradesh, Punjab, Jammu and Kashmir, Himachal Pradesh, Uttarakhand, Rajasthan and Haryana the inter-state buses operate from the Three Inter State Bus Terminals in Kashmiri Gate Inter State Bus Terminal, Sarai Kale Khan Inter-State Bus Terminus and Anand Vihar. Within city DTC operates many bus routes, including the mudrika (the Ring Road Service) and Bahri Mudrika (the Outer Ring Road Service). It is one of the largest CNG-powered bus service operator in the world.

Transportation in Delhi is under-going a vast change with the entry of the Delhi Metro Rail Corporation. This service uses buses with improved carrying capacity and better facilities like air-conditioning, less travel time, less congestion, more comfortable interiors, GPS navigation etc. And now in the list of High Capacity Buses are the new, sleek, red coloured air-conditioned buses of the Delhi

Delhi Metro Rail Corporation (DMRC) was incorporated in May 1995, construction started in 1998, and the first section, on the Red Line, opened in 2002. The Delhi Metro is a metro system serving Delhi and its satellite cities of Faridabad, Gurgaon, Noida and Ghaziabad in National Capital Region in India. Delhi Metro is the world's 12th largest metro system in terms of both length and number of stations. A member of the Nova Group of Metros the network consists of five colour-coded regular lines and the faster Airport Express line, with a total length of 213 kilometres (132 mi) serving 160 stations (including 6 on Airport Express line). The system has a mix of underground, at-grade, and elevated stations using both broad-gauge and standard-gauge. The metro has an average daily ridership of 2.4 million passengers, and, as of August 2010, had already carried over 1.25 billion passengers since its inception.

The Delhi Metro Rail Corporation has been certified by the United Nations as the first metro rail and rail-based system in the world to get "carbon credits for reducing greenhouse gas emissions" and helping in reducing pollution levels in the city by 630,000 tones every year. DMRC operates around 2000 trips daily between 05:30 till 00:00 running with a headway varying between 1–2 minutes and 4–10 minutes. The trains are usually of four, six and eight-coach. The power output is supplied by 25-kilovolt, 50-hertz current through overhead centenary.

Indira Gandhi International Airport (IATA: DEL, ICAO: VIDP) serves as the primary civilian aviation hub for the National Capital Region of Delhi, India. The airport, spread over an area of 5,106 acres (2,066 ha), is situated in Palam, 15 km (9.3 mi) south-west of the New Delhi railway station and 16 km (9.9 mi) from New Delhi city centre. Named after Indira Gandhi, a former Prime Minister of India, it is the busiest airport in the country in terms of passenger traffic since 2009. It is the second busiest airport in the country in terms of cargo traffic after Mumbai. The airport was operated by the Indian Air Force before its management was transferred to the Airports Authority of India. In May 2006, the management of the airport was passed over to Delhi International Airport Limited

(DIAL), a consortium led by the GMR Group. In September 2008, the airport inaugurated a 4,430 m (14,530 ft) runway. The airport uses an advanced system called Airport Collaborative Decision Making (A-CDM) to help keep takeoffs and landings timely and predictable. In 2010, Indira Gandhi International Airport (IGIA) was conferred the fourth best airport award in the world in the 15–25 million category, and Best Improved Airport in the Asia-Pacific Region by Airports Council International.

Communications

The postal and Telephone organizations have played a significant role in the field of communications in Delhi. Delhi has two GPO. Post offices in Delhi are extended (within working hour from 8 am to 4 pm) postal facilities like Speed Post, Express Parcel Posts, Acceptance of Telephone Bills among others. Telephone facilities in Delhi provided by Companies like MTNL, Vodafone, Airtel, Aircel, Idea, Reliance etc. are providing 24x7 communication facility in Delhi.

Electricity and Power

Experience all over the world has shown that enhanced accessibility to electricity enhances lifestyles leading to higher demand of electricity. New industrial units can be established only if there is adequate supply of power. The per-capita consumption of the consumers in Delhi is more than 1400 units per annum as against the national average of 355 units. Delhi, being an urban place with high load density, has seen the electricity consumption increasing from 20040.22 MUs in 2003-04 to 23790.99 MUs in 2009-10. The increase in percentage terms is 18.71% for Delhi for the past seven years. Power sector has become a serious challenge for the Government as it is the primary driver for all round development of the territory.

The Delhi Vidyut Board (DVB), formerly known as Delhi Electric Supply Undertaking (DESU), was responsible for distribution and supply of electricity throughout the territory till 2002. On July 1, 2002, Delhi Vidyut Board (DVB) was unbundled into six successor companies i.e. Delhi Power Company Limited (DPCL)-Holding Company, Delhi Transco Limited (DTL) –Transmission Company, Indraprastha

Power Generation Company Limited (IPGCL) –GENCO, and three Private Distribution Companies i.e. BSES Rajdhani Power Limited (BRPL), BSES Yamuna Power Limited (BYPL) and Tata Power Delhi Distribution Limited (TPDDL) (earlier NDPL). The Government of NCT of Delhi handed over the management of the business of electricity distribution to three private companies BRPL, BYPL and TPDDL with 51% equity being handed over to the private sector and 49% equity being retained by GNCTD through DPCL. Reforms in Power Sector of the Capital City in 2002 have been a great success, and became a showcase model in the country, and many states have followed the Delhi model in their reforms. The load shedding has reduced from 4.9% to 0.3% after the privatization. Delhi is the first state in the country to prepare Islanding scheme to meet the essential and critical load in case of crises due to Grid collapse.

(Source: Website of Department of Power, Government of NCT of Delhi)

Gram Panchayat: Do not exist in Delhi.

(Source: Statistical Handbook 2013)

10 (ii) Census Concepts

House listing Block:

'House listing Block' means a specific area allotted to a specific Enumerator for the purpose of carrying out of Census Operations relating to House Numbering and Houselisting.

Premises:

Premises means building along with the land and/or common places in case of apartments/flats/multi-storey buildings attached to it. A building may not always have a compound wall or fencing. In such cases, the land or the common place as the case may be, that is available to the household may be treated as 'Premises'.

Building:

A 'building' is generally a single structure on the ground. Usually a structure will have four walls and a roof. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, work sheds, schools, places of entertainment, places of worship, godowns, stores, etc. It is also possible that buildings which have component units may be used for a combination of purposes such as residence-cum-shop, residence-cum workshop, residence-cum-office, residence cum-doctor's clinic etc.

Permanent houses:

Permanent houses are buildings whose walls and roof are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials namely tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses:

Semi-permanent houses are structures, either the wall or the roof of which is made of permanent material and the other is made of temporary material.

Temporary houses:

Temporary houses are structures whose walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials namely grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the temporary materials namely grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling room:

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 metres and a breadth of at least 1.5 metres and a height of 2 metres. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, storeroom, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census house is used as a shop or office etc., and the household also stays in it, then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household, then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room. A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census house:

A 'Census House' is a building or part of a building used or recognized as a separate unit because of having a separate main entrance from the road or common courtyard or staircase etc. It may be occupied or vacant. It may be used for a residential or non-residential purpose or both. If a building has a number of Flats or Blocks/Wings, which are independent of one another having separate entrances of their own from the road or a common staircase or a common courtyard leading to a main gate, these will be considered as separate Census houses.

Village:

The basic unit for rural areas is the revenue village which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban Areas

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2011, the definition of urban area adopted is as follows:

- (a) All statutory places with a municipality, corporation, cantonment board or notified town area committee etc.
- (b) A place satisfying the following three criteria simultaneously:
 - (i) A minimum population of 5,000;
 - (ii) At least 75 per cent of male working population engaged in non-agricultural pursuits; and
 - (iii) A density of population of at least 400 persons per sq. km. (1,000 per sq. mile).

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. Examples of OGs are railway colonies, university campuses, port areas, etc., that may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2011, following criteria are taken as pre-requisites: (a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and (b) The total population of all the constituents (i.e. towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census). With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted: (i) a city or town with one or more contiguous outgrowths' (ii) two or more adjoining towns with their outgrowths; and (iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

City:

- Towns with population of 1, 00,000 and above are called cities.

Urban Agglomeration:

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban Out growths (OGs) or two or more physically contiguous towns together and any adjoining urban Out growths of such towns. In some cases, railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread. For the purpose of delineation of Urban Agglomerations during Census of India-2011, following criteria are taken as pre-requisites:

- (a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and (b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 2001 Census). With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:
 - i) a city or town with one or more contiguous outgrowths; ii) two or more adjoining towns with their outgrowths; and iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Normal Household

A 'Normal household' is usually a group of persons who normally live together and take their meals from a common kitchen/common cooking unless the exigencies of work prevent any of them from doing so. The persons in a normal household may be related or unrelated or a mix of both whereas in an institutional household the persons are unrelated. Another difference between the normal and institutional household

is in case of institutional households, the persons live in an institution unlike in a normal household.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2011, it was specifically mentioned that this category of households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households not living in buildings or census houses but living in the open on roadside, pavements, in hume pipes, under fly-overs and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Caste and Scheduled Tribe:

Article 341 of the Constitution provides that the President may, with respect to any State or Union Territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes, which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union Territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union Territories. In pursuance of these provisions, the list of Scheduled Castes and / or Scheduled Tribes is notified for each State and Union Territory and is valid only within the jurisdiction of that State or Union Territory and not outside. It is important to mention here that under the Constitution (Scheduled Castes) Order, 1950, no person who professed a religion different from Hinduism was deemed to be a member of a Scheduled Caste in addition to every member of the Ramdasi, Kabirpanthi, Majhabi or Sikligar caste resident in Punjab or Patiala and East Punjab States Union were in relation to that State whether they professed the Hindu or the Sikh religion. Subsequently, in September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

Language and Mother Tongue:

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person aged 7 years and above who can both read and write with understanding in any language has been taken as literate. It is not necessary for a person to have received any formal education or passed any minimum educational standard for being treated as literate. People who were blind and could read in Braille are treated literates.

A person aged 7 years and above who can both read and write with understanding in any language has been taken as literate. It is not necessary for a person to have received any formal education or passed any minimum educational standard for being treated as literate. People who were blind and could read in Braille are treated literates.

A person, who can neither read or write or can only read but cannot write in any language, is treated as illiterate. All children of age 6 years or less, even if going to school and have picked up reading and writing, are treated as illiterate

Literacy rate

Literacy rate of population is defined as the percentage of literates to the total population age 7 years and above.

$$\text{Literacy} = \text{Number of Literates} / \text{Population aged 7+ years} \times 1000$$

Educational level:

Educational level refers to the highest level of education a person has completed.

Work:

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers. Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main Worker:

A person who has worked for major part of the reference period (i.e., six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal Worker:

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non-Worker:

A person who has not worked at all in any economically productive activity during the reference period (i.e., last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator:

For purposes of the Census, a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation. A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator. Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, groundnuts, tapioca, etc.,

and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural Labourer:

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household Industry Worker:

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods. It does not include professions such as a leader, Doctor, Musician, Dancer, waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other Worker:

A person who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry is termed as 'Other Worker (OW)'. The type of workers that come under the category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers are 'Other Workers'.

Work Participation rate:

$$\text{Work Participation rate} = \frac{\text{Total no. of workers (main + marginal)}}{\text{Total population}} \times 100$$

Population density:

$$\text{Population density} = \frac{\text{Total population of the area}}{\text{Total area (in square kilometre)}}$$

Age:

Age is measured in terms of the completed number of years.

Sex ratio:

Sex ratio has been defined as the number of females per 1000 males in the population. It is expressed as 'number of females per 1000 males'.

$$\text{Sex Ratio} = \text{Number of females} / \text{Number of males} \times 1000$$

Child sex ratio:

Child Sex-ratio (0-6 years) has been defined as the number of females in age-group 0-6 years per 1000 males in the same age-group in the population. It is expressed as 'number of female children age (0-6) years per 1000 male children age (0-6) years'.

$$\text{Child Sex Ratio} = \frac{\text{Number of female Children}}{\text{Number of male children}} \times 1000$$

10(iii) Non-Census Concepts**Improved drinking water:**

If the household has access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water. It may be mentioned that such uniform definition may not be valid across all states.

System of sewerage:

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, some towns are not provided with such underground sewerage system and are served by open surface drain, box drain, sylk pattern drain, etc.

Type of latrine and method of disposal of night soil:

There are three systems of disposal of human wastes prevalent, viz., (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging. The system of underground sewerage provides for the street sewerage which are connected with the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the faecal matter is transported without the need for scavenging. This system generally exists in cities and big towns. Where the streets sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here, the liquid wastes from the water closet is disposed of locally in leaching pit or a septic tank with a soil dispersion system constructed for the purpose. This dispersion requires an optimum travel through the pores of the soil which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed. Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are service type latrines from where human excreta is removed by scavengers from each house and in most cases, carried on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility:

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate (CBR) :

$$\text{Crude birth rate (CBR)} = \frac{\text{Number of live births during the year}}{\text{Mid Year Population}} \times 1000$$

Crude death rate (CDR) :

$$\text{Crude death rate (CDR)} = \frac{\text{Number of a death in a year}}{\text{Mid Year Population}} \times 1000$$

Natural growth rate:

Natural growth rate = Crude birth rate ~ Crude death rate (in the absence of migration)

Age Specific Fertility Rate (ASFR) :

$$\text{Age Specific Fertility Rate (ASFR)} = \frac{\text{Number of live births in a particular age group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

Age Specific Marital Fertility Rate (ASMFR) :

$$\text{Age Specific Marital Fertility Rate (ASMFR)} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age group}} \times 1000$$

General Fertility Rate (GFR):

$$\text{General Fertility Rate GFR} = \frac{\text{Number of live births in the reproductive age-group (15-49) years in a given year.}}{\text{Mid-year female population in the same age-group (15-49 years)}} \times 1000$$

General Marital Fertility Rate (GMFR):

$$\text{General Marital Fertility Rate (GMFR)} = \frac{\text{Number of live births from married women in reproductive age-group (15-49 years) in a given year.}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1000$$

Total Fertility Rate (TFR) :

Total Fertility Rate is the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TFR} = 5 \times \frac{\text{ASFR}_{45-49} + \text{ASFR}_{15-19}}{1000}$$

Total Marital Fertility Rate (TMFR) :

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TMFR} = 5 \times \frac{\text{45-49}}{\text{15-19}} \times \text{ASMFR}$$

$$\frac{\text{đ đ đ đ đ}}{1000}$$

Age Specific Mortality Rate (ASMR) :

$$\text{Age Specific Mortality Rate (ASMR)} = \frac{\text{Number of deaths in a particular age-sex group}}{\text{Mid-year population of the same age-sex group}} \times 1000$$

q1:

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2:

Probability of dying between birth and age 2.

q5:

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR)

Infant Mortality Rate (IMR):

$$\text{Infant Mortality Rate (IMR)} = \frac{\text{Number of infant deaths (death of children below one year) during the year}}{\text{Number of live births during the year}} \times 1000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal Mortality Rate (NMR):

$$\text{Neo-natal Mortality Rate (NMR)} = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1000$$

Early Neo-natal Mortality Rate (ENMR):

$$\text{Early Neo-natal Mortality Rate (ENMR)} = \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Late Neo-natal Mortality Rate (LNMR) :

$$\text{Late Neo-natal Mortality Rate (LNMR)} = \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Post Neo-natal Mortality Rate (PNMR) :

$$\text{Post Neo-natal Mortality Rate (PNMR)} = \frac{\text{Number of deaths of 29 days to less than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

Pre-natal Mortality Rate (PMR):

$$\text{Pre-natal Mortality Rate (PMR)} = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Still Birth Rate (SBR):

$$\text{Still Birth Rate (SBR)} = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Maternal Mortality Rate (MMR) :

$$\text{Maternal Mortality Rate (MMR)} = \frac{\text{Number of maternal deaths to women in the age Group 15-49}}{\text{Number of live birth}} \times 1000$$

Eligible couple (Couples per 1000 population) :

Number of currently married females in the age group 15-44 years per 1000 persons of all ages.

Child woman ratio (0-4) :

Number of children in the age group 0-4 years per 1000 women in the age group 15-49 years.

Child woman ratio (5-9) :

Number of children in the age group 5-9 years per 1000 women in the age group 15-49 years.

Migration:

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he/she is enumerated during the census is other than the place of his/her birth. Similarly a person is considered as a migrant by place of last residence if the place in which he/she is enumerated during the census is other than his/her place of immediate last residence outside the village or town and not simply in another house or locality in the same village or town. Certain aspects concerning temporary movement/migration of people have been explained below as these are important components concerning migration:

(i) Migration of persons in search of job is high in the country. In many cases, such migrants are only seasonal in nature. People migrate to other places for work in a particular season and come back to their usual place of residence after three or four months. All such workers are treated as migrants. Similarly, if a person moved to any other place for attending short term vocational or educational course that lasted for only few months of a year, she/he too is considered as a migrant.

(ii) Where a person had merely gone out to another place or had been shifting from one place to another purely on tour, pilgrimage, visit to hospital for treatment or for temporary business purposes, such a person is not deemed to have had another residence different from the place where she/he or her/his family normally resides. She/he is not considered as migrant.

(iii) A woman temporarily moves into a hospital or to her parents or other relative's house for delivery and if the hospital or the parents/ relatives houses is in a place different from usual place of residence, the place where the hospital or parents/relative's house is the place of last residence of the child but not of the mother. A new response category 'Moved after birth' was added in Census of India 2001 in the question on 'reasons for migration' to bring out additional migration patterns. Natural calamity or distress migration as a reason for migration for last residence migrants, included in 1991 Census, is covered under category of 'Others'

The reason for migration has been determined as applicable at the time of migration and not in reference to any point of time after that. For example, if a person had moved from the place of her/his last residence for the purpose of education and subsequently at some point of time got employment there itself, the reason for migration would be 'education' and not 'work/employment'

Internal and International migration:

The migrational movements are of three types (i) Migration within the state itself with its components, Migration within the district of enumeration (intra district migration), Migration from one district of state to another district of state (inter district migration); (ii) Migration from one state to another State of the country (inter-state migration); (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration. The present name of the country, state or district and not the name by which they were known at the time of her/his birth or last residence are recorded.

Rural - Urban components of migration:

Rural or Urban status in respect of migrants have been determined as applicable at the time of migration and not with reference to any point of time after that. The flow of migrants consists of four streams, viz., rural to rural, rural to urban, urban to rural and urban to urban.

Civic status of urban units :

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town, e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal Council, Municipality etc.

Size class of UA/Town:

Size-class of UA/Town is based on the population size of the UA/City/Town/UAs/Towns with 1,00,000 and above population are classified as Class I UAs/ towns. These Class I UAs/towns are now further sub classified into seven sub classes namely M1 to M7 depending on the population size of UA/City/ Town. These are M7(5,000,000 and above); M6(2,000,000 to 4,999,999); M5 (1,000,000-1,999,999) M4 (500,000-999,999); M3(300,000-499,999), M2 (200,000-299,999) & M1 (100,000-199,999). Towns with, 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5000 and 9999 are Class V towns and towns with less than 5000 population are Class VI towns.

Slum area:

The Slum Areas (Improvement and Clearance) Act, 1956 which was enacted by the Central Govt. defined slums as (a) Areas where buildings are in any respect unfit for human habitation; or (b) areas by reasons of dilapidation, overcrowding, faulty arrangement and design of such buildings, arrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, or detrimental to safety, health or morals.

Mega city:

Schemes for Infrastructure Development in Mega cities, the Ministry of Urban Affairs and Employment, Department of Urban Development adopted the criteria of 4 million and above population as per 2001 Census for Mega Cities. In 2011 Census, cities with 10 million and above population have been treated as Mega cities. Among the Million Plus UAs/Cities, there are three very large UAs with more than 10 million persons in the country. These are Greater Mumbai UA (18.4 million), Delhi UA (16.3 million) and Kolkata UA (14.1 million). The largest UA in the country is Greater Mumbai UA followed by Delhi UA. Kolkata UA which held the second rank in Census 2001 has been replaced by Delhi UA. The growth in population in the Mega Cities has slowed down considerably during the last decade. Greater Mumbai UA, which had witnessed 30.47% growth in population during 1991-2001 has recorded 12.05% during 2001-2011. Similarly Delhi UA (from 52.24% to 26.69% in 2001-2011) and Kolkata UA (from 19.60% to 6.87% in 2001-2011) have also slowed down considerably.

10(iv) 2011 Census findings:**(a) Distribution of population in Rural-Urban areas:**

Out of total 16.7 million population of Delhi, 0.4 million (2.50 percent) reside in rural areas and the remaining 16.3 million (97.50 percent) reside in urban areas. Among rural population 2.26 million are males and 1.92 million are females whereas in urban areas the number of males and females are 87.6 million and 76.0 million respectively. A comparison of the rural and urban data with 2001 Census data reveals that in rural areas, the total population has declined by 55.64 percent while it has increased by 26.83 percent in urban area. This is due to treatment of 52 villages as new Census Towns. Two CTs namely Malik Pur Kohi alias Rang Puri and Aya Nagar were declassified in Census 2001 and have again come up as CTs in 2011 as such they have been taken as new Census town in 2011 after the 2001 Census and one CT Chattar Pur was CT in Census 1981 and declassified during 1991. In Census 2011, it has again come up as CT as such Chattar Pur CT has been taken as new Census Town for Census 2011. Schedule Castes population in rural areas is 82,183 and in urban areas, it is 2,730,126. Scheduled Castes population has declined by 56.4 percent in rural areas and increased by 26.7 percent in urban areas. Among rural population 31.07 percent of total rural population is recorded as work force where as among urban population it is 33.33 percent.

Literates population have decreased by 51.7 percent in the rural areas and increased by 37.5 percent in urban areas. The total workforce has decreased by 56.7 percent in rural areas and increased by 28.6 percent in urban areas during 2001-2011.

(b) Size Class and Status of Towns, Population, Growth, Density, Sex Ratio, Work Participation Rate, Literacy, Religion, Availability of University Education in the Districts.

Size Class and Status of Towns:

The number of Statutory Towns and Census Towns changes from one Census to another due to number of reasons, viz., declaration of new towns through Government notification, addition of new Census Towns, declassification of Census Towns into villages, etc. In Delhi, parts of Statutory Towns fall in more than one district. The statement given below presents the number of Statutory Towns and Census Towns falling in each district as per Census-2011. For the purpose of comprehensive analysis of various demographic characteristics, towns have been divided into different size classes on the basis of their population. As already stated, Statutory Towns fall in parts in more than one district in the State. As such, district-wise distribution of size class of towns on the basis of their population is not presented.

However, the distribution of towns in the entire State according to their size class is presented in the Statement given below. In Census 2011 Out of 113 towns (3 Statutory and 110 Census Towns), 15 towns fall in Size Class I which include all the 3 Statutory Towns and 12 Census Towns. 21 Census Towns fall in Size Class II, 23 Census Towns fall in Size Class III. The maximum number of Census Towns, i.e., 33 falls in Size Class IV. In the remaining two Size Classes, viz., Class V and VI, the number of towns are 17 and 4 respectively.

Sl. No.	Size Class of Town	Population Size	Number of Towns
1	2	3	4
1	Class I	100,000 and above	15
2	Class II	50,000 ĩ 99,999	21
3	Class III	20,000 ĩ 49,999	23
4	Class IV	10,000 ĩ 19,999	33
5	Class V	5,000 ĩ 9,999	17
6	Class VI	less than 5,000	4

There is only one Urban Agglomeration (UA) in Delhi which consists of 3 Statutory Towns and 107 Census Towns (Three Census towns Qutab Garh, Jaffar Pur Kalan, Ujwa do not form part of the UA).

As such, the number of towns shown under size Class I to IV are constituent units of Delhi UA. In Size Class V and VI, only 17 and 4 towns respectively are the constituent units of Delhi UA.

Population:

Population in 2011 among nine districts is given in table below:

Sl. No.	State/District	Total	Rural	Urban
1	NCT of Delhi	16,787,941	419,042	16,368,899
2	North West	3,656,539	213,950	3,442,589
3	North	887,978	17,746	870,232
4	North East	2,241,624	21,527	2,220,097
5	East	1,709,346	3,530	1,705,816
6	New Delhi	142,004	0	142,004
7	Central	582,320	0	582,320
8	West	2,543,243	6,420	2,536,823
9	South West	2,292,958	143,676	2,149,282
10	South	2,731,929	12,193	2,719,736

Two districts, viz., New Delhi and Central, out of the nine, are totally urban. Of the remaining 7 districts comprising rural and urban areas, 99.8 percent of the population of East district resides in urban areas which is the highest in the State. Amongst the seven districts, the South-West district holds the seventh place as only 93.7 percent of its population resides in urban areas. As regards the other districts, the proportion of urban population to total population ranges from 94.1 to 99.7 percent.

Growth:

According to 2011 Census, the population of NCT of Delhi is 1,67,87,941 comprising 89,87,326 males and 78,00,615 females. During the decade 2001-2011, the total population has grown by about 29,37,434 lakhs, recording a growth of 21.2 percent. District wise growth between 2001 and 2011 has been recorded as; North West(27.8), North(13.6) ,North East (26.8), East (16.8), New Delhi (-20.7), Central (-9.9), West (19.5), South West (30.6), South (20.5).

Density:

The Density of NCT Delhi has been recorded as 11,320 in census 2011. Density of District recorded in Census 2011is as mentioned below: North West (8,254), North (14,557),North East (36,155), East (27,132), New Delhi (4,057), Central (27,730), West (19,563), South West (5,446), South (11,060). Among all the density of North East district is highest.

Sex Ratio:

Sex Ratio of NCT of Delhi has been recorded as 868 in Census 2011. The Sex Ratio in district recorded in Census 2011is as follows: North West (865), North (869), North East (886), East (884), New Delhi (822), Central (892), West (875), South West (840), South (862).

Work Participation Rate:

Work Participation Rate of all nine districts recorded in Census 2011 in NCT of Delhi as follows:-

Sl. No.	State/District	Work Participation Rate	Work Participation Rate (Male)	Work Participation Rate (Female)
1	NCT of Delhi	33.28	52.99	10.58
2	North West	32.50	52.14	9.80
3	North	33.38	54.23	9.41
4	North East	29.50	50.01	6.36
5	East	33.91	53.66	11.57
6	New Delhi	41.93	60.22	19.67
7	Central	35.61	57.70	10.84
8	West	34.38	54.02	11.94
9	South West	34.69	53.61	12.17
10	South	33.84	52.85	11.77

Literacy rate:

In Census 2011, the literacy rate depicts a fairly good and encouraging picture in all the nine districts. The male literacy rate ranges between 83.1 and 89.3, whereas the female literacy rate ranges between 76.7 and 85.0.

Sl. No.	State/District	Total Literacy Rate	Male Literacy Rate	Female Literacy Rate
1	NCT of Delhi	86.2	90.9	80.8
2	North West	84.4	89.7	78.4
3	North	86.9	90.9	82.2
4	North East	83.1	88.8	76.7
5	East	89.3	93.1	85.0
6	New Delhi	88.3	92.2	83.6
7	Central	85.1	87.5	82.5
8	West	87.0	91.0	82.4
9	South West	88.3	93.1	82.5
10	South	86.6	91.7	80.6

Religion:

Sl. No.	State/District	Total	Hindu	Muslim	Christian	Sikh	Buddhist	Jain	Other Religion	Religion not stated
1	NCT of Delhi	16,787,941	13,712,100	2,158,684	146,093	570,581	18,449	166,231	2,197	3,606
2	North West	3,656,539	3,211,042	291,330	14,100	92,129	2,281	43,460	345	1,852
3	North	887,978	726,443	119,792	7,256	19,066	1,824	13,049	81	467
4	North East	2,241,624	1,529,337	657,585	9,123	17,424	2,388	24,673	48	1,046
5	East	1,709,346	1,410,852	178,807	15,792	53,027	2,643	46,927	366	932
6	New Delhi	142,004	124,482	8,480	4,852	2,933	312	679	66	200
7	Central	582,320	364,148	194,278	3,527	13,038	362	5,886	107	974
8	West	2,543,243	2,087,294	149,807	18,337	271,752	1,993	11,322	273	2,465
9	South West	2,292,958	2,102,743	112,691	31,226	31,692	2,784	9,215	266	2,341
10	South	2,731,929	2,155,759	445,914	41,880	69,520	3,862	11,020	645	3,329

Availability of University education in the district: Table Below shows availability of University Education in District.

Sl No/	Name of the district	Availability of University education(Y/N)
1	North West	Yes
2	North	Yes
3	North East	Yes
4	East	Yes
5	New Delhi	Yes
6	Central	Yes
7	West	Yes
8	South West	Yes
9	South	Yes

Mother Tongue: Census 2001 in NCT of Delhi:

Sl. No.	Mother Tongue	Population	Sl. No.	Mother Tongue	Population	Sl. No.	Mother Tongue	Population
1	Hindi	1,12,10,843	6	Malayalam	92,009	11	Marathi	26,472
2	Punjabi	9,88,980	7	Sindhi	42,841	12	Oriya	29,178
3	Urdu	8,74,333	8	Nepali	44,367	13	Kashmiri	21,325

9	South West	1,755,041	258,835	14.7	2,292,958	318,408	13.9
10	South	2,267,023	354,258	15.6	2,731,929	422,926	15.5

NCT Delhi has recorded 16.8% of SC population in Census 2011. Among the districts highest percentage of SC population is in Central district and the lowest percent appears in South West district in Census 2011.

In Delhi Scheduled Tribe was not notified. As such information regarding same is not presented.

Brief analysis of PCA data based on insert tables 1 to 35
Brief analysis of Village directory and Town directory
data based on inset table 36 to 45

DISTRICT: NORTH WEST

TABLE-1: Presents the decadal change in population of three tahsils of the district North West during 2001-2011.

According to 2001 Census, the total population of North-West district was 28.6 lakhs. It has risen to 36.5 lakhs in Census-2011. The decadal growth of population of the district works out to 27.8 percent. The rural area of the district has shown a negative growth (-19.4 percent) due to treatment of 17 villages as new Census Towns in Census 2011. Amongst tahsils of the district, the highest growth has been recorded in Narela tahsil (61.5) whereas the lowest growth has been recorded in Model Town tahsil (6.9 percent). Model Town tahsil is totally urbanized. In Saraswati Vihar tahsil, urban population constitutes 98.0 percent of the total population of the tahsil. In Narela tahsil, only 79.2 percent population is residing in urban area since out of the total 48 villages of the district, 36 villages fall in this tahsil.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011

* Recast data as per iurisdiction of Census 2011.												

Table-2: presents the number and percentage of inhabited villages in the district North West in specified population size ranges. The population of this C.D. Block has been given in seven ranges in the table. It is seen from the data that out of 48 inhabited villages in the district, 67.0 percent of the total villages (32 in number) fall in the population size range 2000-4999. This is followed by the population size range 1000-1999 which constitutes 17.0 percent of total villages (8 in number). About 4 percent villages (2 in number) fall in the population size range 5000-9999. About 6.0 percent villages (3 in number) fall in the population size range 10,000 and above. In lower ranges, 2 percent villages (1 in number) fall in the 500-999 range and two villages (4 percent) fall in the range less than 200. None of the villages falls in the population size range 200-499.

Table 2: Number and percentage of inhabited villages in specified population size ranges with the related population, 2011 (Rural)

Table-3 gives an idea about the new Statutory Towns and Census Towns created, de-notified, de-classified and merged with other towns in 2011 Census. At the time of Census 2011, the urban areas of Delhi comprised 113 towns out of which, three were Statutory Towns, viz. Delhi Municipal Corporation (U), New Delhi Municipal Council and Delhi Cantonment, and 110 Census Towns. The number of Statutory Towns has remained same since 1961 Census while the Census Towns and the villages have undergone a change during the period from 1961 to 2011. It is evident from the table that in 2011 Census, no new Statutory Town has been formed in this district. However, 17 villages have been treated as new Census Towns as they fulfilled the demographic and economic criteria adopted in Census 2011. No Statutory Town of 2001 Census was de-notified. And no Statutory Town classified as Census Town based on demographic and economic criteria adopted in Census 2011. No Census Town of 2001 Census was notified as Statutory Town in the 2011 Census. However, three Census Towns were declassified and no town was wholly merged with other town.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census									
District Name: North West (01)									
(a)	New								
	(i) Statutory town								Nil
	(ii) census town	Bhor Garh (CT)Tikri Khurd (CT)Bakhtawar Pur (CT)Bankauli (CT)Mukhmel Pur (CT)Ibrahim Pur (CT)Qadi Pur (CT)Khera Kalan (CT)Barwala (CT)Darya Pur Kalan (CT)Qutab Garh (CT)Lad Pur (CT)Rani Khera (CT)Mubarak Pur Dabas (CT)Nithari (CT)Mohammad Pur Majri (CT)Karala (CT)							17
(b)	Denotified								
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.								Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.								Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.								Nil
©	Declassified	Ghoga(CT) Sanoth (CT) Nangal Thakran(CT)							3 CTs
(d)	Wholly merged with other town(s).								Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.									

Table-4 presents the sex ratio of the State and the district North West from 1901-2011. In 1991 Census, there was only one district in Delhi. However, at the time of 2001 Census, the NCT of Delhi comprised nine districts. From 1961 to 1991, the data for the district North-West is based on recast data as per the jurisdiction of the 2011 Census. The data of sex ratio of Delhi is not consistent; much difference in sex ratio has been noticed from one Census to another, as also in respect of rural and urban areas. The pattern of distribution of sex ratio in urban and rural area for the State and District are almost equal.

Table 4 : Sex Ratio of State and District, 1901-2011

Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	North West	843	872	816
1971	Delhi	801	825	798	North West	808	839	792
1981	Delhi	808	810	808	North West	802	819	798
1991	Delhi	827	807	830	North West	822	801	826
2001	NCT of Delhi	821	810	822	North West	820	808	821
2011	NCT of Delhi	868	852	868	North West	865	849	866

Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.

Table 5 presents the Sex ratio by Sub-district as per the data recorded in Census 2011. From the table, it is seen that Saraswati Vihar tahsil has recorded the highest sex ratio of 872 among all the three tahsils of the district. The remaining two tahsils, viz. Model Town and Narela, have recorded the sex ratio of 867 and 842 respectively. A comparison of the data of the rural and urban components reveal that the rural areas of the district have recorded sex ratio of 849 and, in the case of urban areas it is 866.

Table 5: Sex ratio by Sub-district, 2011

Sl.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5
1	00430-Narela	842	844	842
2	00431-Saraswati Vihar	872	872	872
3	00432-Model Town	867	0	867
	District: 090-North West	865	849	866

Table 6 presents the sex ratio by CD block as per the data recorded in Census 2011. It is worthwhile to mention that the rural components (including Census Towns which are otherwise villages from the revenue point of view) of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same i.e., North-West. It is seen from the table that sex ratio of this CD Block is 849. The total sex ratio of the district (including the urban component) is 865. The sex ratio of this CD Block is 16 points less than the sex ratio of the district (865) and, 19 point less than the sex ratio of the state (868).

Table 6: Sex ratio by CD Blocks, 2011		
Sl.No.	Name of CD block	Sex ratio
1	2	3
1	0001-North West	849
	Total	849

Table-7 presents the distribution of villages by ranges of sex ratio. In this district, 35.42 percent villages (17 out of 48 inhabited villages) have sex ratio in the range of 800-849, 45.83 percent villages (22 villages) fall in the range of 750-799 and 8.33 percent villages (4 villages) fall in the range of 700-749. Only three villages of the district (6.25 percent of total villages) have sex ratio in the range of 650-699.

Two villages (4.17 percent) have sex ratio less than 650. None of the villages of the district has sex ratio more than 850. The overall rural sex ratio of the district is 849.

Table 7: Sex ratio of rural population by ranges, 2011				
Range of sex ratio for villages	Number of inhabited villages	Percentage of villages in each range	Population 2011	Percentage distribution of population
1	2	3	4	5
Less than 700	2	4.17	2767	1.29
700 - 749	0	0.00	0	0.00

Sex ratio District (Rural):849				

Table-8 presents the sex ratio of Urban Agglomeration (UA) and towns as recorded in Census-2011.

As per Census-2011, there is only one UA with 110 constituent units. Out of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. Among the 110 Census Towns 33 fall in this district. The Statutory Town DMC (U) is spread over in all the nine districts and the Statutory Town NDMC is spread over in four districts. Delhi Cantonment is the only Statutory Town which is spread over in only one district. As a result of this peculiar situation, the Delhi UA appears in parts in all the nine districts. The sex ratio of DMC (U) Part recorded is 871. Amongst the Census Towns, Sultan Pur Majra has recorded the highest sex ratio (897) while Bhor Garh has recorded the lowest (792). Out of total 33 Census Towns of the district 22 have recorded sex ratio less than the sex ratio of the State (868) and the remaining 11 Census Towns have recorded sex ratio more than the State sex ratio.

Table-9 presents the sex ratio of population in the age group 0-6 for tahsils in the district. In this district, the highest sex ratio (871) in the age group 0-6 is recorded in Saraswati Vihar tahsil. The lowest sex ratio (852) is recorded in Narela tahsil. In the rural areas of the tahsils, Saraswati Vihar tahsil has recorded the highest sex ratio (827) whereas Narela tahsil has recorded the lowest sex ratio (819) among the two tahsils (as model town tahsil is fully urban). In the urban areas of the district, the highest sex ratio is recorded in Saraswati Vihar tahsil (872), whereas the lowest is recorded in Narela tahsil (861). The overall sex ratio in the same age group of the district is 865.

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Table-10 This table depicts the sex ratio of population in the age group 0-6 for the C.D. Block. The sex ratio of 0-6 age group of this C.D. Block is higher than the sex ratio of total rural sex ratio of the State, which is 821 and 814 respectively. The sex ratio of this age group is 47 points less than the total sex ratio of the State (868).

Table 10: Sex ratio of population in the age group 0-6 for CD Blocks, 2011					
Sl.No.	Name of CD Block	Total population in 0-6 age group			Sex ratio for 0-6 age group

	Total	28936	15894	13042	821

Table-11 This table presents the sex ratio of the CD Block in the age group 0-6 by different ranges of population. It is seen from the table that out of 48 inhabited villages in this C.D. Block, 7 villages (14.58 percent of the total villages) fall in the sex ratio range of 800-849. 12 villages (25 percent of total villages) fall in sex ratio range of less than 700. In ranges of sex ratio 700-749, 750-799, 850-899, 900-949, 950-999 there are 4 villages (8.33 percent), 10 villages (20.83 percent), 5 villages (10.42 percent), 6 villages (12.50 percent), 3 villages (6.25 percent) respectively. 1 village (2.08 percent) falls in range 1100+ and no village falls in the range 1000-1099. This table also depicts the range of sex ratio 900-949 covers the maximum percentage of population of the 0-6 age group which is 32.82 % and the range of sex ratio 1100+ covers the minimum percentage of population of the same age group which is 0.03%.

Table 11: Sex ratio of rural population in the age group 0-6 by ranges, 2011

Sex ratio District (Rural):821				

Table-12 This table presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its units falling in district North-West.

All the Census Towns as well as the Statutory Towns falling in this district are constituent units of the Delhi Urban Agglomeration (Part). It is seen from the table that the urban area of the district has recorded sex ratio of 869 in the age group 0-6 which is 48 points more than the sex ratio of the rural areas of the district for the same age group (821). Amongst the constituents of the UA, the highest sex ratio (926) is recorded in Nithari (CT) and lowest (744) is in Lad Pur (CT) out of 33 CTs and 1 DMC (U) part. Moreover, 10 CTs have recorded sex ratio less than 800 while the remaining 23 CTs & 1 DMC (U) part have recorded sex ratio between 800 and 926.

Table-13 This presents the number and percentage distribution of the Scheduled Castes and Scheduled Tribes population in tahsils as recorded in Census-2011. In this district, the proportion of Scheduled Castes population recorded is 23.59 percent in rural areas and 18.79 percent in urban areas. Amongst the rural area of the tahsils, Narela tahsil has recorded 23.23% and Saraswati Vihar tahsil has recorded 24.92% Scheduled Castes population. Model Town tahsil is totally urban. In the urban areas, the highest proportion (19.19 percent) of SC population is recorded in Saraswati Vihar tahsil and the lowest (18.02 percent) is in Model Town tahsil. In Delhi no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 13: Number and percentage of scheduled castes and scheduled tribes population in Sub-districts, 2011

		Rural	213950	50468	0	23.59	0
		Urban	3442589	646769	0	18.79	0

Table-14 The table gives the number and percentage of Scheduled Castes and Scheduled Tribes population in the CD Block. As stated earlier, the rural components of the district and the entire CD Block are identical and the names of the district and the CD Block are the same. In this CD Block as well as rural areas of the district, SC population comprises 23.59 percent of the total population of the district. This proportion is 4.52 point more than the proportion of Scheduled Castes population of the entire district (19.07). In comparison to urban it is 4.80 point more than the proportion of Scheduled Castes population of the urban areas of the district (18.79). In Delhi no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-15 This table presents distribution of villages in specified percentage ranges of Scheduled Castes population. It is seen from the table that 25 percent villages (12 out of 48) have 18.57 percent Scheduled Castes population in the percentage range 11-20 of Schedule Castes population to total population. 19 villages (39.58 percent) fall in the range of 21-30 percent having 36.22% Schedule Castes population. 10 out of 48 villages (20.83 percent) fall in the percent range 31- 40 have 43.66% Schedule Castes population. 2 villages (4.17 percent) fall in percentage range less than 5 and 3 villages (6.25 percent) fall in percentage range of 5-10. It is seen from the table that two villages has no Scheduled Castes population. None of the villages falls in 40 plus percentage range of Schedule Castes population to total population.

Table-17 presents the number and percentage of Scheduled Castes in Urban Agglomeration and its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. It is seen from the data given in the table that Scheduled Castes population in the urban areas constitutes 18.79 percent of the total population. The proportion of Scheduled Castes population in the rural areas of the district is 23.59 percent. Amongst the constituent units of the UA, the highest percentage (44.73) of Scheduled Castes population is recorded in Sultan Pur Majra (CT) and the lowest (9.7) is in Nithari (CT).

Table-20 The table presents the number of literates, illiterates and literacy rate by tahsils as recorded in Census2011. Data relating to gap between male and female literacy rate has also been presented. In this district the literacy rate for males is higher (89.66) than that of females (78.41). The literacy rate for urban areas is also higher than that of rural areas in both the cases of males and females. In urban areas, 84.74 percent are literates where as in rural areas; 79.63 percent are literates. A comparison of the male-female literacy data would indicate that male literacy rate is lower by 2.58 percent in rural areas (87.23) as compared to urban area (89.81). In contrast, female literacy rate is higher (78.88) by 8.15 percent in urban areas than that of rural areas (70.73). A comparison of the literacy rate amongst the tahsils would indicate that Saraswati Vihar tahsil has the highest male and female literacy rate 90.71 and 79.90 respectively. The lowest male literacy rate and lowest female literacy rate are recorded in Narela tahsil and which are 87.70 and 73.81 respectively among all 3 the tahsils of the district. A gap of 16.5 points is recorded in male and female literacy rate of rural areas whereas it is 10.93 points in the case of urban areas of the district. Amongst the urban areas of the three tahsils, lowest gap (9.58 points) is recorded in the Model Town tahsil and highest gap is (13.89 points) in the case of Narela tahsil. In the case of rural areas, the highest gap is 17.2 points that is recorded in Saraswati Vihar tahsil and lowest i.e. 16.31 points is recorded in Narela tahsil.

Table-22 This presents the distribution of villages by literacy rate range as recorded in Census-2011. The distribution of villages grouped under 12 ranges of literacy rate for villages. In this district, a majority of 40 villages (83.33 percent of total villages) fall in the literacy rate range of 81-90 and cover 64.27 percent rural population of the district and 5 villages (10.42 percent) fall in the literacy rate range of 71-80 and, cover 8.24 percent rural population of the district. Three villages (6.25 percent) fall in literacy rate range of 61-70 and cover 27.49 percent rural population of the district. The overall rural literacy rate recorded for the entire district is 79.63.

Table-23 This table presents the number of literates, illiterates and literacy rate by sex and gap in male-female literacy rate in Urban Agglomeration and its constituent units. It is seen from the table that in the urban areas of the district, there is a gap of 10.93 points in the male and female literacy rate. A comparison of the male and female literacy rate indicates that amongst males, the highest literacy rate (95.19) is recorded in Lad Pur (CT) whereas in case of females, the highest literacy rate (83.09) is recorded in DMC (U) part. The lowest literacy rate for males is recorded in Bawana (CT) (77.22) and for females it is (62.26) in Sahibabad Daulat Pur (CT).

Tables 27 to 29 relate to Scheduled Tribes Population In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-30 Presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils as recorded in Census- 2011.

In this district out of 36.56 lakh persons 11.88 lakhs are reported as workers (main and marginal workers) and they constitute 32.50 percent of total population. Out of them, 31.04 percent are Main Workers and 1.46 percent are Marginal Workers. In total workers, 52.14 percent are male workers whereas female workers constitute only 9.80 percent. Amongst the three tahsils, Model Town tahsil has the highest percentage of workers (33.75) and Narela tahsil has the lowest (31.51). In the case of male workers, The percentage of workers in all the three tahsils ranges between 50.26 and 53.99 in case of males and it ranges between 9.25 and 10.38 in case of females.

Table-32: presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units.

It is seen from the table that the total male workforce in the urban areas of the district constitute 52.31 percent of total male population whereas female workforce constitute only 9.76 percent. Amongst the males 50.42 percent are Main Workers and 1.89 percent are Marginal Workers. In the case of females Main and Marginal Workers constitute 8.96 and 0.80 percent respectively. Amongst the constituent units of the UA, the highest percentage of male workers (52.86) is recorded in Bankauli (CT) and lowest (45.11 percent) is recorded in Mukhmel Pur (CT). In the case of females, the highest (11.57 percent) and the lowest (4.30 percent) workforce are recorded in the Lad Pur (CT) and Qadi Pur (CT) respectively. The composition of Main and Marginal Workers is almost the same in all the constituent units of the UA.

Table-33: presents the distribution of Workers by sex into four broad categories, viz. Cultivators, Agricultural Labourers (AL), Household Industry Workers (HHI) and Other Workers (OW) as recorded for all the three tahsils in Census 2011.

In North-West district 0.96 percent workers are reported as Cultivators. Among Cultivators females (1.07 percent) are more than males (0.94 percent). The proportion of Household Industry (HHI) Workers and Agricultural Labourers are also more in the case of females (HHI-3.15 percent, AL-1.68 percent) than that of males (HHI – 3.0, AL – 1.03). But in case of OW category it is reverse proportion of males (95.03 percent) is

higher than females (94.09 percent). Among the three tahsils Narela tahsil has a large rural area, which recorded the highest male and female Cultivators viz. 2.71 and 3.56 percent respectively and Agricultural Labourers in also recorder highest (3.33 percent) in this tahsil. Not much difference is noticed in males and females engaged in Household Industry in all the three tahsils. Model Town tahsil which is fully urban has recorded the highest percentage of males and females in the OW Category (96.75 and 96.29 respectively). Narela tahsil has recorded the lowest percentage of male workers (91.96) and female workers (87.21) in the OW category.

Table-34: presents the distribution of Workers by sex into four broad categories, viz. Cultivators, Agricultural Labourers (AL), Household Industry Workers (HHI) and Other Workers (OW) in CD- Blocks as recorded in Census 2011.

It is seen from the table that the percentage of males and females in the Other Workers category are 82.43 and 72.93 percent respectively. More females (9.81 percent) are reported in the Cultivators category than males (8.28 percent). The proportion of female Agricultural Labourers (AL-14.07 percent) and Household Industry Workers (HHI- 3.19 percent) are also higher than that of males (AL-7.23 percent) & (HHI-2.06 percent).

Table 34: Distribution of workers by sex in four categories of economic activity in CD blocks, 2011												
Sl. No.	Name of CD Block	Persons/ Male s/ Females	Total population	Total workers (main + marginal workers)	Category of Workers

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units. From the table, it is evident that in the case of males only 1.17 percent workers are engaged in agricultural pursuits and in case of females this proportion works out to 1.36 percent. Household Industry Workers constitute 3.05 percent males and 3.15 percent females. In the 'Other Workers' category males and females constitute 95.78 and 95.49 percent respectively of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the Urban Agglomeration (Part) may reveal that the majority fall in the 'Other Workers' category.

Post office includes post office, telegraph office and post & telegraph office					
Telephone includes Telephone, PCO and mobiles					
Bus includes private and public					

Table-39 gives the distribution of villages according to the distance from the nearest Statutory Town and availability of different amenities in the villages of this CD Block. Some of the villages are located in close proximity of Statutory Town Delhi Municipal Corporation (Urban). The distance of the town has been reckoned from the Town Hall, which is the headquarters of the Statutory Town.

It is seen from the table that out of the 48 inhabited villages in this CD Block, 8 villages fall in the distance range of less than 5 Kms, 21 villages fall in the distance ranges 5-15 Kms. and 18 villages are in the range of 16-50 Kms. from the Statutory Town. Only one village is unspecified whose distance is zero from the Statutory Town. In case of villages fall in the distance range 16-50 from the Statutory Town Educational facility is available in 17 villages (94.44 percent) of the total villages and Telephone, Transport Communications and approach by pucca road are available in all the 18 villages (100.0 percent) within these ranges. In the same distance range, Medical and post office facilities are available in 13 villages (72.22 percent) and 10 villages (55.56 percent) respectively. However, banking facility in this range is available only in 4 villages (22.22 percent). Facility of Agriculture Credit Society is not available in any of the Villages.

Table 39: Distribution of villages according to the distance from the nearest statutory town and availability of different amenities, 2011

\$ Transport communication includes bus service, rail facility and navigable waterways.										
@ Bank includes Commercial Bank and Cooperative Bank.										

Table-40 depicts the distribution of villages according to population range and availability of amenities in these villages.

In this table, villages have been classified into six population ranges. The data reveals that 32 villages (66.66 percent of total villages) fall in the population range of 2000-4999, 8 villages (16.66 percent) fall in 1000-1999 and 2 villages (4.16 percent) fall in 1-499 and two fall in range 5000-9999. Three villages constituting 6.25 percent of total villages fall in the population range 10,000 and above. One village (2.08 percent) fall in the population range 500-999. In the case of villages fall in the population range 2000-4999, amenities like Drinking water, Telephone, Transport communications, Power supply and Approach by pucca road are available in all villages. Moreover Educational facility is available in 30 villages (93.75 percent), Medical facility is available in 27 villages (84.38 percent), banks facilities is available in 8 villages (25 Percent) and post office facility is available in 19 villages (59.38 percent) of this population range. Agricultural credit societies facility is not available in any of the villages of six ranges. In range 5000-9999 basic amenities like Education, Medical, Drinking water, Post office, Telephone, Transport communications, Banks, power supply

and approach by pucca road are available in 2 villages (100 percent) falls in this range. In the lower ranges, viz., 500-999 and 1000-1999, basic facilities like Drinking water, Telephone, Transport communications, Power and Approach by pucca road are available in all villages. No bank facility is available in these ranges in all villages in this CD Block.

# Post office includes post office, telegraph office and Post and telegraph office.												
\$ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
* Telephone includes Telephone, PCO and Mobile.												

Table-41 presents the distribution of villages according to land use. From the table, it is seen that 62.13 percent of the total area in this CD Block is cultivable. Out of this cultivable area, 94.87 percent is irrigated and the remaining 5.13 percent is un-irrigated.

Table 41: Distribution of villages according to land use, 2011					
Sl.No.	Name of CD Block	Number of inhabited villages	Total area (in Hectares)	Percentage of cultivable area to total area	Percentage of irrigated area to total cultivable area
1	2	3	4	5	6
1	0001-North West	48	16499.00	62.13	94.87
	Total	48	16499.00	62.13	94.87
Note:- Cultivable area= irrigated area + unirrigated area					

Table 42: reflects that highest number of Primary schools are reported in Darya Pur Kalan (CT) which is 7.92 per 10,000 population among all 33 towns. Similarly highest number of Middle school is in Khera Kalan (CT) which is 6.06 per 10,000 population. Highest number of Secondary/Matriculation school, Senior secondary school and College are in Barwala (CT), Khera Khurd (CT) and Ali Pur (CT) respectively per 10,000 population among all 33 towns. As against highest number of School/College, the lowest number of Primary school is reported in Kirari Suleman Nagar (CT) and Pooth Kalan (CT) are shared with the 0.42 per 10,000 populations among all 33 towns. Similarly the lowest number of middle school are in Pooth Kalan (CT) which is 0.31 per 10,000 among 30 towns but this facility is not available in the rest three villages Bankauli (CT), Ibrahim Pur (CT), Mohammad Pur Majri (CT). The lowest number of Secondary/Matriculation school, Senior secondary school and college are in Sultan Pur Majra (CT) having 0.28, 0.17 and 0.06 per 10,000 population.

Table 42: Schools/ colleges per 10,000 population in towns, 2011

DISTRICT: NORTH

Table-1 presents the decadal change in population of tahsils of the North district in 2001-2011.

North district has shown a growth of only 13.6percent during 2001-2011. The reason for this low growth can be attributed to the fact that this district does not have any major scope for expansion either horizontally or vertically. Amongst the tahsils of the district, the Civil Lines Tahsil has recorded a growth of 30.8percent. The rural areas of this tahsil have recorded a negative growth of 61.9 percent. Sadar Bazar Tahsil has recorded a negative growth (-2.1percent) during the decade may be due to continuous increasing commercial activities. Of the three tahsils of the district, two tahsils, viz., Sadar Bazar and Kotwali, are totally urban and in Civil Lines Tahsil also, about 97.4percent population resides in urban areas.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011

Table-2 below presents the number and percentage of inhabited villages in specified population size ranges. It is seen from the table that 50.0percent(one Village) of the total villages (2 in number) of this district fall in the population size range 10000 and above, other50.0 percent (one number)fall in the population size range 5000-9999. None of the villages falls in the other specified population size range i.e. less than 2000-4999.

Table 2: Number and percentage of inhabited villages in specified population size ranges with the related population, 2011 (Rural)

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. At the time of Census 2001, the urban areas of Delhi comprised 62 towns out of which, three are Statutory Towns and 59 are Census Towns. The number of Statutory Towns has remained the same since 1961 Census but in census 2011 Delhi comprises 110 CTs. It is evident from the table that in 2011 Census, no new Statutory Town has been formed. However, two villages have been treated as new Census Towns. Out of the total 51 newly created Census Towns, two fall in this district. None of the Statutory Towns which is falling in part in the district, is denotified after 1991 Census. No Census Town of 2001 Census has also been notified as Statutory Town in 2011 Census. The table also reveals that no town has been declassified or wholly merged with other towns in Census 2011.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census		
District Name: North (02)		
(a)	New	
	(i) Statutory town	Nil
	(ii) census town Mukand Pur (CT) Kamal Pur Majra Burari (CT)	2
(b)	Denotified	
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.	Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.	Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.	Nil
©	Declassified	Nil
(d)	Wholly merged with other town(s).	Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.		

Table-4 Presents the sex ratio of the State and district from 1901 to 2011. Till 1991 Census, there was only one district in Delhi. However, at the time of 2001 Census, the NCT of Delhi comprised nine districts. From 1961 to 1991, the data for the district is based on recast data as per the jurisdiction of the 2001 Census. Much difference in sex ratio has been noticed from one Census to another, as also in respect of rural and urban areas. The pattern of distribution of sex ration rural and urban areas for the State and District is almost on the same lines.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: North (02)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	North	757	874	756
1971	Delhi	801	825	798	North	779	818	779
1981	Delhi	808	810	808	North	801	827	800
1991	Delhi	827	807	830	North	819	795	820
2001	NCT of Delhi	821	810	822	North	826	811	827
2011	NCT of Delhi	868	852	868	North	869	859	870
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2011 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 Depicts the sex ratio of tahsils as recorded in Census-2011. From the table, it is observed that the highest sex ratio (874) is recorded in Civil Lines Tahsil followed by Sadar Bazar Tahsil (864). The least sex ratio of 838 is recorded in Kotwali Tahsil. The reason for low sex ratio in this tahsil can be attributed to the presence of migrant male labourers without their spouses in the commercial areas. Out of the three tahsils, only Civil Lines Tahsil has rural areas. The urban area has a higher sex ratio (870) than the rural area (859) in this district.

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5
1	00433-Civil Lines	874	859	874
2	00434-Sadar Bazar	864	0	864
3	00435-Kotwali	838	0	838
	District: 091-North	869	859	870

Table-6 presents the sex ratio of the C.D. Block which comprises the rural population. It is worthwhile to mention here that the rural components (including Census Towns which are otherwise villages from the revenue point of view) of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same i.e., North. It is seen from the table that sex ratio of this C.D. Block is 859. The total sex ratio of the district (including the urban component) is 869. Hence, the sex ratio of this Block is 10 points less than the total sex ratio of the district (including its rural component). It is 9 points less than the State sex ratio (868).

Table 6: Sex ratio by CD Blocks, 2011

1	2	3
1	0002-North	859
	Total	859

Table-7 presents the distribution of villages by the ranges of sex ratio.

In this district, there are only two villages which fall in the range of 850-899 which constitute 100 percent of total villages. The overall sex ratio of the rural areas of the district recorded is 859.

Table 7: Sex ratio of rural population by ranges, 2011

Sex ratio District (Rural):859				

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and towns as recorded in Census-2011.

As per Census-2011, there is only one UA with its 110 constituent units. Of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts. As a result of this peculiar situation, the Delhi UA is appearing in parts in all the nine districts. Delhi UA, falling in part in this district has recorded a sex ratio of 870. Amongst the constituent units, the highest sex ratio (873) is recorded in Jharoda Majra Burari CT and the lowest is in Mukand Pur CT which is 855.

Table-9 Presents the sex ratio of population in the age group 0-6 for all the three tahsils in the District.

In this district, two tahsils are totally urban. Of the three tahsils in the district, the highest sex ratio in the age group 0-6 is recorded in Sadar Bazar Tahsil (900) and the lowest is in Civil Lines Tahsil (868). Civil Lines Tahsil comprises both urban and rural areas. The rural areas of this tahsil have recorded a sex ratio of 886. The urban areas of this tahsil have recorded a sex ratio of 867.

Table-10 Depicts the sex ratio of population in the age group 0-6 in the C.D. Block.

The sex ratio of population in the 0-6 age group of this C.D. Block is higher than the sex ratio of total rural population of the State, which are 886 and 814 respectively. The sex ratio of this age group is 15 points more than the sex ratio of the same age group of the State (871).

Table 10: Sex ratio of population in the age group 0-6 for CD Blocks, 2011

Table-11 Presents the sex ratio of the C.D. Block in the age group 0-6 by different ranges.

It is seen from the table that there are only two villages in this C.D. Block. One village is in the range of sex ratio 800-849 having population 1031 (43.12 percent of the total population) the second village falls in the range of sex ratio 900-949 having population of 1360 (56.88 percent of total population).

Table-12 Presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units.

The Statutory Town DMC(U) falls in part in the district. It is seen from the table that the urban areas of the district have recorded sex ratio of 873 in the age-group 0-6 which is 13 points less than the sex ratio of the rural areas of the district for the same age group (886). Amongst the constituents of the UA, the highest sex ratio is recorded in Mukand Pur CT (920) and the lowest is in Jharoda Majra Burari CT (827).

Table-13 presents the number and percentage distribution of the Scheduled Castes population in tahsils as recorded in Census-2011.

In this district, the proportion of Scheduled Castes population recorded is 6.98percent in rural areas and 18.89percent in urban areas. Amongst the rural areas of the tahsils, Civil Lines Tahsil has recorded 6.98percent Scheduled Castes population. Sadar Bazar and Kotwali Tahsils are totally urban. In the urban areas, the highest proportion of SC population is recorded in Sadar Bazar Tahsil (21.42 percent) and the lowest is in Kotwali Tahsil (12.11 percent). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 13: Number and percentage of scheduled castes and scheduled tribes population in Sub-districts, 2011

Table-14 gives the number and percentage of Scheduled Castes population in the C.D. Block as recorded in Census 2011.

As stated earlier, the rural components of the district and the C.D. Block are identical and names of the district and C.D. Block are the same. In this C.D. Block as well as rural areas of the district, SC population comprises 6.98percent of the total population of the district. This proportion is 11.68 points less than the proportion of Scheduled Castes population of the entire district. Whereas it is 11.91 points less than the proportion of Scheduled Castes population of the urban areas of the district. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-17 presents the number and percentage of Scheduled Castes in Urban Agglomeration (Part) and its constituents units as recorded in Census 2011. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

It is seen from the data given in the above table that Scheduled Castes population in the urban areas constitutes 18.89 percent of the total population. The proportion of Scheduled Castes population in the rural areas of the district is 6.98 percent. Amongst the constituent units of the UA, the highest percentage (21.52) of Scheduled Castes population is recorded in DMC(U) Part and the lowest(11.14) is in Jharoda Majra Burari(CT).

Table 17: Number and percentage of scheduled castes and scheduled tribes population in towns, 2011

Table-19 Presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units.

It is seen from the table that sex ratio of the Scheduled Castes population is 904 in the urban areas of the district. This is 42 points more than the sex ratio of SC population of the rural areas of the district (862). Amongst the constituent units of the Urban Agglomeration of the district, highest sex ratio of 909 is recorded in DMC (U) Part and lowest sex ratio is shared by Mukand Pur (CT) and Jharoda Majra Burari (CT) having sex ratio of 871 each. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

	District (Urban): 091-North	904	0

Table-20 presents the number of literates and illiterates, literacy rate by tahsils and the data relating to gap in male and female literacy rates as recorded in 2011 Census.

The literacy rate of this district is 86.23 for rural areas and 86.87 for urban areas. In rural areas of the district, 93.02percent males and 78.28percentfemales have been recorded as literates. In urban areas of the district, the male literacy rate is higher (90.85) than that of females (82.28). A comparison of the literacy data amongst the tahsils would indicate that Civil Lines Tahsil has recorded the highest literacy rates for males (92.34) and for females (86.83) is recorded as highest in Kotwali Tahsil. Where as for both the sexes, the lowest literacy rate is recorded in Sadar Bazar Tahsil (males i 84.31, females i 78.95). The gap in male - female literacy rate for the district as a whole is 8.69 points. The gap is higher in rural areas (14.74 points) than in urban areas (8.57 points). In all the tahsils, the females are lagging behind males in literacy. The gap in male- female literacy rate is narrow in urban areas than that in rural areas.

Table-23 presents the number of literates, illiterates and literacy rate percentage of literates and gap in male-female literacy rate in Urban Agglomeration (Part) and its constituent units. It is seen from the table that in the urban areas of the district, there is a gap of 8.57 points in the male and female literacy rates. In the case of rural areas, a gap of 14.74 points is recorded in male and female literacy rates. A comparison of the male and female literacy rates indicates that amongst males, the highest literacy rate (94.17) is recorded in Burari (CT) whereas Mukand Pur (CT) has recorded the lowest 88.72. In Case of female the lowest literacy rate is recorded in Mukand Pur (CT) (72.77) and DMC(U) Part recorded the highest literacy rate (83.23).

Table-24 Presents the number of literates, illiterates and literacy rate among Scheduled Castes by sex as recorded in the C.D.Block in Census 2011.From the data in the table, it is seen that the literacy rate recorded in the C.D. Block is 81.15. In the case of males, the literacy rate recorded is 89.81 whereas for females it is only 71.82, which is very low. The gap in male-female literacy rate in the C.D. Block is 17.99.

Table-25 gives an idea about the distribution of villages by literacy rate range for Scheduled Castes.

It is seen from the table that there are only Two villages in the C.D. Block. Which fall in the range of literacy rate 71-80 and 81-90.The literacy rate of the Scheduled Caste population for the entire district is 81.65.

Table-26 presents the number of literates and illiterates and literacy rate among Scheduled Castes by sex in towns.

It is seen from the table that in the case of males, the highest literacy rate (90.76) is recorded in Census Town Burari. Where as the lowest literacy rate (84.5) for males is recorded in Census Town Mukand Pur (CT). In case of females, the highest (75.71) literacy rate is recorded in Burari (CT). The lowest female literacy rate (65.78) is recorded in the Census Town MukandPur (CT). The gap in male-female literacy rate in the towns recorded ranges between 13.79 and 18. 72. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. As such, Tables-27,28and 29 relating to Scheduled Tribes are not being presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils as recorded in Census-2011. In this district, out of total population 33.38percent are reported as Workers. The percentage of male workers is higher (54.23) than the percentage of female workers (9.41). The total workforce comprises 31.94percent Main Workers and1.45 percent Marginal Workers. In the three tahsils of the district, the highest workforce is recorded in Kotwali Tahsil (36.96 percent) and the lowest is recorded in Civil Lines Tahsil (32.81 percent). For males, the percentage of total workers ranges between 52.84 and60.59 and for females it ranges between 7.26 and 9.88 in all the three tahsils.

Table-31 depicts the distribution of Main Workers, Marginal Workers and Non-Workers by sex in the C.D. Block.

As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same i.e. north. It is seen from the table that in this C.D. Block, 48.69 percent males and 7.68percentfemales have been recorded as Workers. The percentage of Main Workers and Marginal Workers for males works out to 46.74 and 1.95percentrespectively, whereas these percentage for females, are only 7.20 and 0.49 respectively.

Table-32 Presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part)and its constituent units.

From the data given in the table, it is seen that the total male workforce in the urban areas of the district constitutes 54.34percent of total male population whereas the female workforce constitutes only 9.45percent. Amongst the males, 52.44 percentare Main Workers and 1.9 percentage Marginal Workers. In the case of females, Main and Marginal Workers constitute 8.51 and 0.94percent respectively. Amongst the constituent units of the UA, the highest percentage of male work force (56.26) has recorded in DMC(U) Part of the district whereas the lowest percentage of male workforce (49.01) has recorded in Jharoda Majra Burari (CT). In the case of females, the highest (10.36percent) and the lowest (6.80percent) workforce is recorded in DMC(U) Part and Mukand Pur (CT) respectively. Mukand Pur (CT) recorded the highest percentage of Non-workers (69.87) and the DMC (U) Part recorded the lowest (65.10).

Table-33 Given presents the distribution of Workers into four broad categories, viz., Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers as recorded in Census-2011.

In this district, 95.14 percent males and 93.62percent females are Other Workers (OW). Only a few workers have been reported as Cultivators and Agricultural Labourers. This is due to the fact that two tahsils of this district, viz., Sadar Bazar and Kotwali, are totally urban. Amongst the tahsils of the district, the proportion of male workers in the OW category ranges from 92.75percent (Kotwali Tahsil) to 95.69percent (Civil Lines Tahsil). In the case of females, the proportion of workers in OW category ranges from 90.61percent (Kotwali Tahsil) to 94.17percent in (Civil Lines Tahsil). In the case of HHI Workers, it is noticed that more females are engaged in HHI than males and their proportion ranges from 3.36percent (Civil Lines Tahsil)to 8.27percent (Kotwali Tahsil). In the case of males, this proportion ranges from 2.94percent (Civil Lines Tahsil) to 6.84percent (Kotwali Tahsil).The proportion of workers reported in other two categories i.e., Cultivators and Agricultural Labourers are negligible.

Table-34 presents the distribution of Workers by sex into four categories of workers in this C.D. Block as recorded in Census 2011.

It is seen from the table that in case of males and females Other Workers, are 81.05and 46.98percent respectively form the majority. More females (42.06percent) have been reported as engaged in cultivation than males (15.83percent). The proportion of female Agricultural Labourers (AL-5.56percent) and Household Industry (HHI) Workers (5.40percent) are also higher than that of males (AL-1.42percent, HHI-1.70percent).

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units. From the above table, it is evident that in the case of males, only 0.5 percent workers are engaged in agricultural pursuits. In the case of females, this proportion works out to 1.64percent. Household Industry workers constitute only 3.72percent in the case of males and 3.97percent in the case of females. In the 'Other Workers' category, males constitute 95.40 and females constitute 94.39percent of the total workforce. A look at the pattern of distribution of workforce into four categories in case of the constituent units of the Urban Agglomeration (Part) may reveal that a majority falls in the 'Other Workers' category.

NOTE:-Table 36 to 45 represents brief analysis of the village directory and town directory. The non census data presented in these table has been collected from deferent departments/agencies and revenue authorities.

Table-36 depicts the distribution of villages according to availability of different amenities. Then on-Census data presented in the table has been collected from different departments/agencies and revenue authorities. It is seen from the table that there are only 2villages in this district. Facilities of Education, Drinking water, Telephone, Transport Communication, Approach by Pucca Road and Power Supply are available in both the Villages (100 Percent). Only One village has Post Office facility (50 Percent). Other facilities like Medical, Banks and Agricultural Society are not available is any of the villages in this CD Block.

Table 36: Distribution of villages according to availability of different amenities, 2011												
Sr. No.	Name of CD Block	Number of inhabited villages	Type of amenity available									
			Education	Medical	Drinking water	Post office [#]	Telephone [*]	Transport communications ^{\$}	Banks [@]	Agricultural credit societies	Approach by pucca road	Power supply

# Post office includes post office, telegraph office and Post and telegraph office.												
\$ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
* Telephone includes Telephone,PCO and Mobile.												

Table-37 gives an idea about availability of different amenities to the rural population of the district.

It is heartening to note that basic facilities like Education, improved drinking water, Telephone, power, Transport Communications and approach by pucca road are available to the 100 Percent rural population. Post office facility is available to 41.18 percent of the rural population. Facilities of Medical, Banks and agricultural credit societies are not available in any of the villages of this C.D. Block.

Table 37: Number and percentage of rural population served by different amenities, 2011												
Sr. No.	Name of CD Block	Total population of inhabited villages	Type of amenity available

* Telephone includes Telephone, PCO and Mobile.												

Table-38 depicts the distribution of villages not having certain amenities, arranged by distance ranges from places where these facilities are available.

It is seen from the table that there are only Two villages in this C.D. Block. Residents of one village have to travel a distance of less than 5 Kms. for Middle School and for Degree College residents of both the villages have to travel a distance of less than 5 Kms. Residents of one village have to cover a village distance of less than 5 Kms. for Major Medical facilities and the residents of the another village have to travel a distance of 5-10 Kms. For Primary Health Centres (PHC) facility is available to residents of both villages within 5 Kms. Post office facility is available to only one village which is within 5 Kms of that. Facilities like Commercial Bank, Cooperative Bank and Agricultural credit society are available to both the villages with in less than 5 Kms.

Table 38: Distribution of villages not having certain amenities, arranged by distance ranges from the places where these are available, 2011					
Village not having the amenity of		Distance range of place from the villages where the amenity is available

Table-39 gives the distribution of villages according to distance from the nearest Statutory Town and availability of different amenities in the villages of this C.D. Block. The villages of this C.D. Block are located in close proximity of the Statutory Town Delhi Municipal Corporation (U). The distance of the villages from the Statutory Town has been reckoned from the head quarter of the town i.e., Town Hall. It is seen from the table that all the 2 villages in this C.D. Block fall in the distance range less than 5Kms. from the nearest Statutory Town. Educational, Telephone, Approach by Pucca road and Transport Communication facility are available in both villages (100percent) Post office facility is available in one village (50.0 percent). Medical, Bank and agricultural credit society facilities are not available in any of the villages in this C.D. Block.

Table-40 depicts the distribution of villages as per population range and availability of amenities.

In the table villages have been classified into six population ranges. The data reveals that out of two villages one village each fall in the population range of 5000-9999 and 1000+. The villages in this C.D. Block falling in the population ranges 5000-9999 have facilities of Education, improved drinking water, telephone, transport communications, power supply and approach by pucca road (100 percent of the total villages). Only one village falls in the 5000-9999 range which has facility of Post Office. None of the two villages have Medical, banks and agricultural credit society facilities.

Table 40: Distribution of villages according to population range and amenities available, 2011												
Population range	Number \ Percentage	Number of inhabited villages in each range	Type of amenity available									
			Education*	Medical^	Drinking water	Post office #	Telephone *	Transport communications \$	Banks @	Agricultural credit societies	Approach by pucca road	Power supply

Table-41 presents the distribution of villages according to land use.

From the table it is seen that 64.65percent of the total area in this C.D. Block is cultivable. Out of this cultivable area 98.67percent is irrigated and the remaining 1.33percent is un-irrigated.

Table 41: Distribution of villages according to land use, 2011					
Sr.No.	Name of CD Block	Number of inhabited villages	Total area (in Hectares)	Percentage of cultivable area to total area	Percentage of irrigated area to total cultivable area
1	2	3	4	5	6
1	0002-North	2	698.60	64.65	98.67
	Total	2	698.60	64.65	98.67
Note:- Cultivable area= irrigated area + unirrigated area					

Table 42- reflects that highest number of Primary schools are reported in Jharoda Majra Burari(CT) which is 1.31 per 10,000 population among all 4 towns. Similarly highest number of Middle school is in Bhurari (CT) which is 0.55 per 10,000 populations. Highest number of Secondary/Matriculation school, Senior secondary school both are in Mukand Pur (CT) respectively per 10,000 population among all 4 towns. There is number college in all the 4 towns. As against highest number of School/College, the lowest number. of Primary school reported in Kamal PurMajraBurari(CT) are shared with the 0.46per 10,000 population among all 4 towns. Similarly the lowest number. of middle school are in MukandPur (CT) which is 0.18 per 10,000 among 4 towns but this facility is not available in both Kamal PurMajraBurari (CT) and Jharoda MajraBurari(CT). The lowest number of Secondary/Matriculation school, Senior secondary school is in Burari(CT) having 0.14 per10,000 population.

Table 42: Schools/ colleges per 10,000 population in towns, 2011						
Sr. Number	Name of the town	Type of educational institution				
		Primary	Middle	Secondary / matriculation	Senior secondary	College

DISTRICT: NORTH EAST

Table-1 presents the decadal change in population of all the three tahsils of the district North-East during 2001-2011:

In this district, the total population has grown by 26.8 percent during the decade 2001-2011. The growth is higher in urban areas (36.5 percent) in the district. In rural areas, a negative growth (-84.8 percent) has been recorded due to conversion of 4 villages as new Census Towns in 2011 Census. Amongst the tahsils, Seelam pur has recorded a growth of 49.8 percent which is highest amongst all the three tahsils of the district, whereas Shahdara has recorded the lowest growth which is 1.5 percent. A look at the data of rural-urban distribution of population in tahsils reveals that Shahdara and Seema Puri tahsils do not have any rural area in 2011 census. As for urban distribution of population in the tahsils, it is seen that Shahdara & Seema puri tahsils are fully urban and in Seelam Pur, 98.4 percent of population resides in urban areas.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011

Table-2 presents the number and percentage of inhabited villages in specified population size ranges. It is seen from the table that 50 percent of the total villages (4 in number) of this district fall in the population size range 2000-4999. One village each (12.0 percent) falls in the population size ranges less than 200, 200-499, 500-999 and 5000-9999. None of the villages falls in the population size range 1000-1999 and 10000 and above.

Table 2: Number and percentage of inhabited villages in specified population size ranges with the related population, 2011 (Rural)

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. At the time of Census 2011, the urban areas of Delhi comprised of 113 towns out of which, three are Statutory Towns and 110 are Census Towns. The number of Statutory Towns has remained the same since 1961 Census. It is evident from the table that in 2011 Census, no new Statutory Town has been formed. However, 4 villages have been treated as new Census Towns. None of the Statutory Towns of 2001 has been denotified. As such, information in respect of (b) (i) and (ii) is recorded as 'Nil'. No Census Town of 2001 Census which falls in this district has been notified as a Statutory Town in 2011 Census. It is also seen from the table that no town falling in this district has been declassified or wholly merged with other towns since 2001 Census.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census													
District Name: North East (03)													
(a)	New												
	(i) Statutory town												Nil
	(ii) census town	Baqiabad (CT)	Khan Pur Dhani (CT)	Tukhmir Pur (CT)	Mandoli (CT)								4
(b)	Denotified												
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.												Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.												Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.												Nil
©	Declassified												Nil
(d)	Wholly merged with other town(s).												Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.													

Table-4, below presents the sex ratio of the State and District from 1901-2011.

In 1991 Census, there was only one district in Delhi. However, at the time of 2001 Census, the NCT of Delhi comprised of nine districts. From 1961 to 1991, the data for this district is based on recast data as per the jurisdiction of the 2011 Census. The data of sex ratio of Delhi is not consistent. Much difference in sex ratio has been noticed from one Census to another as also in respect of rural and urban areas. The table presents a comparative picture of the sex ratio.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: North East(03)		Total	Rural	Urban	District	Total	Rural	Urban
Census Year	State							
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	North East	757	819	715
1971	Delhi	801	825	798	North East	769	787	766
1981	Delhi	808	810	808	North East	804	810	804
1991	Delhi	827	807	830	North East	837	819	840
2001	NCT of Delhi	821	810	822	North East	849	849	849
2011	NCT of Delhi	868	852	868	North East	886	837	887
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2011 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of tahsils as recorded in Census-2011. Amongst the three tahsils of this district Shahdara tahsil has recorded the highest sex ratio (906). Seema Puri and Seelam Pur tahsils have recorded sex ratio of 877 and 881 respectively. Shahdara and Seema Puri tahsils have recorded sex ratio higher than the sex ratio of the district (886). In the urban areas, the highest sex ratio of 906 is recorded in Shahdara tahsil and the lowest (882) is in Seelam Pur tahsil. In the rural areas, the sex ratio 837 is recorded in Seema Puri tahsil. Shahdara and Seema Puri tahsils are fully urban.

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5
1	00436-Seelam Pur	881	837	882
2	00437-Shahdara	906	0	906
3	00438-Seema Puri	887	0	887
	District: 092-North East	886	837	887

Table-6 presents the sex ratio of the C.D. Block as recorded in Census- 2011.

It is worthwhile to mention here that the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same which is North-East. It is seen from the table that sex ratio of this C.D. Block is 837. The total sex ratio of the district (including the urban component) is 886. The sex ratio of this Block is 31 points less than the State sex ratio (868).

Table 6: Sex ratio by CD Blocks, 2011		
Sr.No.	Name of CD block	Sex ratio
1	2	3
1	0003-North East	837
	Total	837

Table-7 below presents the distribution of villages by the ranges of sex ratio.

In this district five villages which constitute 62.50 percent of the total villages have sex ratio in the range of 800-849. One village each (12.50 percent) falls in the range of 700-749, 850-899 and 900-949. None of the village in this district falls in the range of less than 700, 750-799, 950-999, 1000-1099 and 1100 and above. The overall sex ratio of the rural areas of the district is 837.

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and Towns as recorded in Census-2011:

As per Census-2011, there is only one UA with its 110 constituent units. Out of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts. As a result of this peculiar situation, the Delhi UA appears in parts in districts of the state. The UA Part of the district has recorded a sex ratio of 887. Amongst the constituent units, the highest sex ratio is recorded in two Census Towns. Mir Pur Turk census town (914) & Jaffrabad census town (914) and lowest sex ratio is recorded is Sadat Pur Gujran Census Town (848).

Table 8: Sex ratio of towns, 2011

Table-9 presents the sex ratio of population in the age group 0-6 for all the three tahsils as recorded in Census-2011.

In this district Seema Puri and Shahdara tahsils are totally urban. And among three tehsils Seema Puri has recorded the highest sex ratio of 888 in urban areas as well as in total in the age group of 0-6. Shahdara tahsil has recorded lowest sex ratio (872) in urban areas. Only Seelam Pur Tahsil has rural areas, which has recorded the rural sex ratio 841 for 0-6 age group. The overall sex ratio of the district is 880 in totality, 841 in rural areas and 881 in urban areas.

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Table-11 presents the sex ratio of the population of C.D. Block in the age group 0-6 by different ranges. It is seen from the table that out of 8 villages in this C.D. Block, 3 villages constituting 37.50 percent of the total villages fall in the sex ratio range of 850-899 in the age group 0-6. In the sex ratio range of 750-799 there are two villages constituting 25.00 percent of total villages. One village (12.50 percent) each has recorded sex ratio in the range of 800-849, 1000-1099 and 1100+.

Table 11: Sex ratio of rural population in the age group 0-6 by ranges, 2011

Sex ratio District (Rural):841				

Table-12 presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units. The Statutory Town DMC (U) partly falls in the district. All the Census Towns and Statutory Town DMC(U)(Part) are the constituent units of Delhi UA (Part). It is seen from the table that the urban areas of the district have recorded sex ratio of 881 in the age-group 0-6 which is 40 points higher than the rural areas of the district (841) for the same age group . Among the constituents of the UA part of the district, highest sex ratio (937) is recorded in Jaffrabad (CT) and the lowest (771) is in Khan Pur Dhani(CT).

Table-13 presents the number and percentage distribution of the Scheduled Castes and Scheduled tribe population in tahsils as recorded in Census-2011. In this district, the proportion of Scheduled Castes population recorded is 11.93 percent in rural areas and 16.72 percent in urban areas. There is only one tahsil, Seelam Pur which has rural areas and has recorded 11.93 percent Scheduled Caste population. Shahdara and Seema Puri tahsils are fully urban. In the urban areas, the highest proportion (29.8 percent) is recorded in Seema Puri tahsil and the lowest (11.59 percent) SC population is in Shahdara tahsil. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-14 Gives the number and percentage of Scheduled Castes and Scheduled Tribe population in the C.D. Block. As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same which is North East. C.D. Block as well as rural areas of the district, comprises 11.93 percent SC Population of the total population of the district. This proportion is 4.74 points less than the proportion of Scheduled Castes population of the entire district. As compared to urban areas, it is 4.79 points less than the proportion of Scheduled Castes population of the urban areas of the district (16.72). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-15 presents distribution of villages in specified percentage ranges of Scheduled Castes population to total population. It is evident from the table that there are 8 villages in this District. Three villages (37.50percent) have Schedule Castes population; 42.43 % of the district falls in the percentage range of 11-20. Two villages (25.00 percent) fall in the percentage range of 5-10. One village (12.50 percent)each falls in the less than 5 and 21-30 percentage range. One village (12.50 percent) has no Scheduled Castes population.

Table-17 presents the number and percentage of Scheduled Castes population in Urban Agglomeration (Part) and its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. It is seen from the data given in the table that Scheduled Castes population in the urban areas constitutes 16.72 percent of the total urban population of the district. Amongst the constituent units of the UA, the highest percentage (45.15) of Scheduled Castes population is recorded in Mandoli (CT) and the lowest (3.25) is in Mustafabad (CT).

Table-18 depicts the sex ratio of Scheduled Castes population in the C.D. Block. The sex ratio of Scheduled Castes population of this CD Block is 889, which is 52 points higher than the sex ratio of the CD Block for total population (837). It is also higher by 21 points than the sex ratio of the State (868). In Delhi, no Scheduled Tribe is notified. As such, data for the same is not presented.

Table 18: Sex ratio among scheduled castes and scheduled tribes (rural) in CD Blocks, 2011			
Sr.No.	Name of C.D.block	Scheduled castes sex ratio	Scheduled tribes sex ratio

	Total	889	0

Table-19 presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units as recorded in Census- 2011. It is seen from the table that sex ratio of the Scheduled Castes population is 897 in the urban areas of the district. This is 8 points more than the sex ratio of SC population of the rural areas of the district (889). Amongst the constituent units of the UA, Jaffrabad Census Town has recorded the highest sex ratio of 938 and Baqiabad Census Town has recorded the lowest sex ratio of 845. The Statutory Town DMC (U), which falls in part in the district has recorded a sex ratio of 903. The sex ratio of the Schedule Caste population of the UA in this district is also more than the total Schedule Caste sex ratio of the state (889). In Delhi, no Scheduled Tribe is notified. As such, the data for the same is not presented.

Table-20 presents the number of literates and illiterates, percentage of literates by tahsils as recorded in 2011- Census. Data relating to gap in male and female literacy rate has also been presented. In this district, literacy rate for males is 88.78 percent. On the other hand the urban and rural areas have literacy rate 88.8 and 86.19 percent respectively. In the case of females, it is 76.71 in urban areas and 72.02 in rural areas. Amongst the tahsils, Shahdara tahsil has recorded the highest literacy rate for males (90.01) as well as that for females (82.12). The lowest male literacy rate (88.37) is recorded in Seema Puri tahsil and lowest female literacy rate (75.65) is also recorded in Seema Puri tahsil. In the rural and urban areas of the tahsils, it is observed that in Seelam Pur Tahsil, male literacy rate is higher in Urban areas than that of Rural areas. Shahdara and Seema Puri tahsil is totally urban. The data relating to gap in male-female literacy rate reveals that in this district as well as in all the three tahsils of the district, females are lagging behind in literacy. The gap between male and female literacy rates ranges between 7.89 and 12.9 in all the three tahsils of the district.

Table-21 gives the number of literates , illiterates and literacy rate by sex in the C.D. Block. It is seen from the table below that the male and female literacy rate are 86.19 and 72.02 respectively and the gap in male - female literacy rate is 14.17 percent in the CD block North East. The gap in male - female literacy rate for the entire district is 12.11, which is 1.93 points more than the gap of literacy rate of the State(10.18).

Table 21: Number of literates and illiterates, literacy rate by sex in CD Blocks (rural), 2011

Table-22 presents the distribution of villages by literacy rate range as recorded in Census-2011. In this district, there are eight villages. Out of eight villages, three villages (37.50 percent) falls in literacy rate range of 81-90. Two villages (25 percent) fall in the literacy rate range of 71-80. One village (12.50 percent) each falls in range of literacy rate 11-20, 21-30 and 91-99 respectively. The overall rural literacy rate recorded for the district is 79.74.

Table-23 presents the number of literates, illiterates, literacy rate and gap in male female literacy rate in Urban Agglomeration (Part) and its constituent units. It is seen from the table that in the urban areas of the district gap in male –female literacy rate is 12.09 points. In the case of rural areas, a gap of 14.17 points is recorded in male and female literacy rate. A comparison of the male and female literacy rate indicates that the highest literacy rate amongst males (98.74) and females (94.61) is recorded in Khan Pur Dhani (CT). The lowest literacy rate is recorded in Khajoori Khas (CT) in the case of males (82.6) and in case of females (66.28) in Mustafabad (CT).

Table-24 presents the number of literates, illiterates and literacy rate of Scheduled Castes in this C.D. Block. From the data given in the table, it is seen that the literacy rate recorded for Scheduled Castes in the C.D. Block is 81.61. In the case of males, the literacy rate recorded is 89.57 whereas for females it is only 72.5, which is very low. A gap of 17.07 percent is observed in male and female literacy rates of the C.D.Block.

Table 24: Number of scheduled castes literates and illiterates, literacy rate by sex in CD Blocks, 2011											
Sr.No.	Name of CD Block	Number of literates and illiterates						Literacy rate			Gap in male-female literacy rate

Table-25 gives an idea about the distribution of villages by literacy rate range for Scheduled Castes. The table does not include those villages which have no Scheduled Castes population. It is seen from the table that there are 7 villages out of which 4 villages (57.14 percent) have recorded the literacy rate for Schedule Caste between 81-90. One village (14.29 percent) each falls under literacy rate ranges of 31-40, 71-80 and 100. In range of literacy rate for villages 0, 1-10, 11-20, 21-30, 41-50, 51-60, 61-70 and 91-99 there are no inhabited villages having Schedule Caste population. Schedule Caste literacy rate for rural areas of the district is 81.61.

Table-26 presents the number of literates, illiterates and literacy rate among Scheduled Castes by sex in towns. It is seen from the table that in the case of males, the highest literacy rate (98.43) is recorded in Khan Pur Dhani (CT). The lowest literacy rate for males (85.61) is recorded in Tukhmir Pur (CT). In the case of females, the highest literacy rate (87.56) is recorded in Khan Pur Dhani (CT). The lowest female literacy rate (67.78) is recorded in Sadat Pur Gujran (CT). The gap in male and female literacy rate in the towns varies between 12.37(Babar Pur (CT)) and 19.02 (Karawal Nagar (CT)).

In Delhi, no Scheduled Tribe is notified. As such, Tables 27, 28 and 29 relating to Scheduled Tribes are not presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils as recorded in Census-2011.

In this district, less proportion of workers is reported. Only 29.50 percent population of the district is workforce. Out of total workforce 27.77 percent are Main Workers and only 1.74 percent are Marginal Workers. Much difference is noticed between male and female workforce and females lag far behind the males as work area in this district. This is evident from the fact that total male workers constitute 50.01 percent whereas the female workforce is only 6.36 percent. A comparison of the data amongst the tahsils reveal that Shahdara tahsil has reported the highest male workforce (52.24 percent) and Seelam Pur tahsil has recorded lowest (49.42 percent). In the case of females, the highest and lowest percentage of workers have been reported in Seema Puri (8.86) and Seelam Pur (5.16) tahsils respectively.

Table 30: Number and percentage of main workers, marginal workers, and non-workers by sex in tahsils, 2011

Table-31 depicts the distribution of Main Workers, Marginal Workers and Non-Workers by sex in the C.D. Block. As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same. It is seen from the table that in this C.D. Block, 47.18 percent males and 4.69 percent females have been recorded as total Workers. The percentage of Main Workers and Marginal Workers for males works out to 45.90 and 1.28 percent respectively, whereas for females it is only 4.03 and 0.66 percent respectively. In the district 72.18 population is recorded as non-workers .

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given in the table, it is seen that the total male workforce in the urban areas of the district constitutes 50.04 percent of total male population whereas the female workforce constitutes only 6.38 percent. Amongst the males, 47.65 percent are Main Workers and 2.39 percent are Marginal Workers. In the case of females, Main and Marginal Workers constitute 5.37 and 1.01 percent respectively. Amongst the constituent units of the UA, the highest percentage of male workers (52.36) is recorded in Jaffrabad (CT). Where as the lowest percentage of male workers (46.52) is recorded in Baqiabad (CT). In the case of females, the highest (11.43 percent) and the lowest (2.31 percent) workforce is recorded in Khan Pur Dhani (CT) and Baqiabad (CT) respectively. The composition of Main and Marginal Workers is almost the same in all the constituent units of the UA, Non-Workers constitute 70.48 percent in the UA Part of this district. The proportion of male and female Non-Workers are 49.96 and 93.62 percent respectively.

Table-33 presents the distribution of Workers into four broad categories, viz., Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers by sex in tahsils as recorded in Census 2011. In this district, 99.30 percent workers are engaged in non-agricultural activities and they fall under HHI and OW categories. The proportion of male and female workers in these two categories are 99.33 and 99.01 percent respectively. Tahsil wise, the proportion of males under OW category ranges between 94.17 percent (Shahdara tahsil) and 96.59 percent (Seema Puri tahsil) and in case of females it ranges between 88.04 percent (Seelam Pur tahsil) and 94.80 percent (Shahdara tahsil). The proportion of male HHI Workers ranges between 2.74 percent (Seema Puri tahsil) and 5.52 percent (Shahdara tahsil). In the case of females, it ranges between 4.39 percent (Seema Puri tahsils) and 10.78 percent (Seelam Pur tahsil).

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units as recorded in census 2011. From the table, it is evident that in the case of males, only 0.56 percent workers are engaged in agricultural pursuits. In the case of females, this proportion works out to 0.89 percent. Household Industry workers constitute only 4.32 percent in the case of males and 7.55 percent in the case of females. In the 'Other Workers' category, males constitute 95.11 and females constitute 91.56 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the UA (Part) reveal that the majority of workers fall in the 'Other Workers' category.

NOTE: Table 36 to 45 represented brief analysis of the village Directory and town Directory. The non census data presented in these tables have been collected from different departments/agencies and revenue authorities.

Table-36 depicts the distribution of villages according to availability of different amenities. It is seen from the table that out of 8 inhabited villages in the district, education facility is available in 4 villages (50 percent of the total villages). Medical and Post Office facility is also available in 4 villages (50 percent of the total villages). Improved drinking water, Telephone, transport communications, Approach by pucca road and Power supply facilities are available to all the 8 villages. However, only two villages (25 Percent of the total villages) have banking facility. Only one village (12.5 Percent of the total villages) has the facility of agricultural credit society.

Table 36: Distribution of villages according to availability of different amenities, 2011												
Sr. No.	Name of CD Block	Number of inhabited villages	Type of amenity available									
			Educational	Medical	Drinking water	Post office [#]	Telephone [*]	Transport communications ^{\$}	Banks [@]	Agricultural credit societies	Approach by pucca road	Power supply
1	2	3	4	5	6	7	8	9	10	11	12	13
1	0003-North East	8	4 (50)	4 (50)	8 (100)	4 (50)	8 (100)	8 (100)	2 (25)	1 (12.5)	8 (100)	8 (100)
	Total	8	4 (50)	4 (50)	8 (100)	4 (50)	8 (100)	8 (100)	2 (25)	1 (12.5)	8 (100)	8 (100)
Note:- Percentages are given in brackets.												
# Post office includes post office, telegraph office and Post and telegraph office.												
\$ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
* Telephone includes Telephone, PCO and Mobile.												

Table-37 depicts the number and percentage of rural population served by different amenities. It is encouraging to note that basic facilities like improved drinking water, power, transport communications, telephone and approach by pucca road are available to 100.0 percent of the rural population. Educational and medical facilities are available to 61.78 percent of the rural population. Post office facility is available to 63.31 percent rural population. Banks and agricultural credit societies are available to 41.58 and 19.67 percent respectively of the rural population.

Table 37: Number and percentage of rural population served by different amenities, 2011

Note:- Percentages are given in brackets.												
# Post office includes post office, telegraph office and Post and telegraph office.												
\$ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
* Telephone includes Telephone, PCO and Mobile.												

Table-38 presents the distribution of villages not having certain amenities, arranged by distance ranges from the places where these facilities are available. It is seen from the table that out of 8 villages in the C.D. Block, residents of 4 village have to travel a distance of less than 5 Kms for Primary Schools. While residents of 5 villages have to travel less than 5 Kms. for Middle Schools. Residents of 7 villages have to travel 5-10 Kms. and residents of 1 village have to travel beyond 10 Kms. to avail college facility. Major medical facilities like Hospital residents of one village have to travel less than 5 Kms., residents of 5 villages have to travel 5-10 Kms. and residents of two villages have to travel more than 10 Kms. For Primary Health Centres (PHC) residents of 2 villages have to travel less than 5 Kms. , of five villages 5-10 Kms. and residents of one village have to travel more than 10 Kms. For Post Office facility residents of only 4 villages have to travel less than 5 Kms. Facilities like Telephone and Bus Services are available in all the 8 villages. For Commercial Bank facility the residents of two villages have to travel less than 5 Kms. and residents of 4 villages have to travel 5-10 Kms. For facility of Co-operative Bank residents of 2 villages have to travel less than 5 Kms. residents of 5 villages have to travel 5-10 Kms. and residents of 1 village have to travel more than 10 Kms. Facility of Agriculture Credit Society is available in only 1 village and residents of 2 villages have to travel a distance of less than 5 Kms. residents of 4 villages have to travel 5-10 Kms and residents of 1 village have to travel more than 10 Kms. to avail this facility.

Table 38: Distribution of villages not having certain amenities, arranged by distance ranges from the places where these are available, 2011

Table-39 gives the distribution of villages according to the distance from the nearest Statutory Town and availability of different amenities in the villages of this C.D. Block. The villages of this C.D. Block are located in close proximity to the Statutory Town DMC (U). The distance of the villages from the Statutory Towns has been reckoned from the headquarters of the town i.e., Town Hall. It is seen from the table that out of the 8 villages in the C.D. Block, 7 fall in the distance range of 5-15 Kms. and 1 falls in distance range of 16-50 Kms. from the nearest Statutory Town. In case of 7 villages falling in the distance range 5-15 kms from the nearest Statutory Town, educational, Medical and Post Office facility are available to 4 villages (57.14 percent of the total villages). In this range Telephone, transport communications and approach by pucca road facilities are available to all the 7 villages. And Bank facility is available to 2 villages (28.57 percent of the total villages) in the same range. In the same range Facility of Agriculture credit Society is available only to one village (14.29 Percent of the total villages). One village falls in the distance range of 16-50 Kms. from nearest Statutory Town. The facility of Telephone, Transport Communications and Approach by Pucca Road are available in all the 7 village.

Table 39: Distribution of villages according to the distance from the nearest statutory town and availability of different amenities, 2011

Table-40 depicts the distribution of villages according to population range and availability of amenities. In this table, villages have been classified into six population ranges. The data reveals that none of the villages fall in the population range of 1000-1999 and 10000 and above. 2 villages fall in the population range of 1-499 and both the villages have Drinking Water, Telephone, Transport Communication, Approach by Pucca road and Power supply facilities. Out of these two villages, only one village has Education, Medical and Post Office facilities. In the same range of population, none of the village has Bank and Agriculture Credit Societies facilities. Residents of one village fall in population range 500-999 having facilities of Drinking Water, Telephone, Transport Communications, Approach by Pucca road and Power supply. In the Population range of 2000-4999 there are 4 villages. Amenities like Drinking Water, Telephone, Transport Communication, Approach by Pucca road and Power Supply are available to all the 4 villages. In the same range Education, Medical and Post Office facilities are available to 2 villages; Banks and Agricultural Credit Societies facilities are available to 1 village. In the Population range of 5000-9999 there is only one village and all the amenities are available in this village except Agricultural Credit Societies.

Table 40: Distribution of villages according to population range and amenities available, 2011

Table-41 presents the distribution of villages according to land use. From the table, it is seen that 48.15 percent of the total area in this C.D. Block is cultivable. Out of this cultivable area, 93.67 percent is irrigated and the remaining 6.33 percent is un-irrigated.

Table 41: Distribution of villages according to land use, 2011					
Sr.No.	Name of CD Block	Number of inhabited villages	Total area (in Hectares)	Percentage of cultivable area to total area	Percentage of irrigated area to total cultivable area
1	2	3	4	5	6
1	0003-North East	8	1377.70	48.15	93.67
	Total	8	1377.70	48.15	93.67
Note:- Cultivable area= irrigated area + un-irrigated area					

Table -42 reflects that highest number of Primary Schools and Middle Schools are reported in Tukhmipur (CT) which are 8.84 and 3.53 per 10,000 population among all 15 Towns. Similarly highest number of secondary Schools are reported in Mir Pur Turk (2.09) Highest number of Sr. Secondary and colleges are reported in

Babar Pur which are 1.08 and 0.54 per 10,000 population .Thereis no college in any of the towns except Babar pur (CT). It is also revealed from the table that 1.69 Primary School,0.98 Middle School, 0.58 Secondary School, 0.42 Sr. Secondary, 0.02 College are available per 10,000 population of district.

Table 42: Schools/ colleges per 10,000 population in towns, 2011

DISTRICT: EAST

Table-1 presents the decadal change in population of all the three tahsils of district East in 2001-2011. East district has recorded a growth of population of 16.8 percent in this decade. The urban and rural growth of population of the district is 18.0 and -80.6 percent respectively. The negative growth in the rural areas is due to treatment of 4 villages as new Census Towns in census 2011. A comparison of the data at the tahsil level reveals that Preet Vihar tahsil has recorded the highest growth (20.5 percent) whereas and Gandhi Nagar tahsil has recorded the lowest (7.2 percent). The rural area of Preet Vihar tahsil has recorded a negative growth (-69.5 percent). In census 2011 Gandhi Nagar Tehsil has no village therefore rural growth of population in this tahsil is -100.0 percent. In census 2001, 98.8 percent population of the district was urban which has risen to 99.8 percent in census 2011. Amongst the three tahsils in the district, Vivek Vihar and Gandhi Nagar are totally urban. In the remaining one tahsil Preet Vihar, 99.7 percent of the population resides in urban areas.

Table-2 presents the number and percentage of inhabited villages in specified population size ranges with the related population as recorded in Census 2011. It is seen from the table that there is only one village in the District which falls in the population size range 2000-4999. Therefore the other population range (10,000 plus, 5000-9999, 1000-1999, 500- 999, 200-499 and population size range that is less than 200) contains zero number of village.

Table 2: Number and percentage of inhabited villages in specified population size ranges with the related population, 2011 (Rural)

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. At the time of Census 2001, the urban areas of Delhi comprised 110 towns out of which, three are Statutory Towns and 107 are Census Towns. The number of Statutory Towns has remained the same since 1961 Census. It is evident from the table that in 2011 Census, no new Statutory Town has been formed. However, 2 villages of 2001 Census falling in this district have been treated as new Census Towns in 2011 Census. No Statutory Town of 2001 Census has been denotified. As such, information in respect of item (b) (i) and (ii) has been recorded as 'Nil'. It is also be seen from the table that no Census Town of 2001 Census was notified as Statutory Town in 2011 Census. No town of the district was declassified or merged with other towns in Census 2011.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census												
District Name: East (04)												
(a)	New											
	(i) Statutory town											Nil
	(ii) census town	Shakar Pur Baramad (CT)	Chilla Saroda Khadar (CT)									2
(b)	Denotified											
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.											Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.											Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.											Nil
©	Declassified											Nil
(d)	Wholly merged with other town(s).											Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.												

Table-4 presents the sex ratio of the State and district from 1901-2011. Till 1991 Census, there was only one district in Delhi. However, at the time of 2001 Census, the NCT of Delhi comprised nine districts. From 1961 to 1991, the data for the district is based on recast data as per the jurisdiction of the 2011 Census. The decadal data of sex ratio of Delhi is not consistent. Much difference in sex ratio has been noticed from one Census to another, as also in respect of rural and urban areas. The table presents a comparative picture of the sex ratio.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: East(04)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9

1981	Delhi	808	810	808	East	830	778	831
1991	Delhi	827	807	830	East	846	806	851
2001	NCT of Delhi	821	810	822	East	843	801	844
2011	NCT of Delhi	868	852	868	East	884	897	884
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of all the three tahsils as recorded in Census-2011. In this district, Vivek Vihar Tahsil has recorded the highest sex ratio (896) amongst the three tahsils. The lowest sex ratio (877) is recorded in Preet Vihar Tahsil which is less than the sex ratio of the district (884). The sex ratio of the urban areas of this district is (884) lower than the sex ratio of the rural areas (897). Preet Vihar is the only tahsil which comprises rural areas and has recorded the sex ratio of 897. In the urban areas among the three tahsils the highest sex ratio (896) is recorded in Vivek Vihar Tehsil and the lowest (877) is recorded in Preet Vihar tahsil.

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban

	District: 093-East	884	897	884

Table-6 presents the sex ratio of the C.D. Block which comprises the rural population. The rural components of the district and the entire C.D. Block are identical and names of the district and the C.D. Block are the same which is East. It is seen from the table that sex ratio of this C.D. Block is 897. The total sex ratio of the district (including the urban component) is 884. The sex ratio of this Block is 29 points more than the State sex ratio (868).

Table 6: Sex ratio by CD Blocks, 2011

Sex ratio District (Rural):897				

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and towns as recorded in Census-2011. As per Census-2011, there is only one UA with its 110 constituent units. Out of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts. As a result of this peculiar situation, the Delhi UA is appearing in parts in the district. The sex ratio of Delhi UA Part, falling in the district is 844. The sex ratio of the urban areas of the district is also the same. Amongst the constituent units, the highest sex ratio is recorded in Chilla Saroda Khadar Census Town (953) and lowest is recorded in Shakar Pur Baramad Census Town (727).

Table 8: Sex ratio of towns, 2011

Table-9 Presents the sex ratio of population in the age group 0-6 for all the three tahsils and the district. In this district, Preet Vihar Tahsil has recorded the sex ratio of 876 in the age group 0-6, which is highest amongst the three tahsils. Whereas Gandhi Nagar tahsil has recorded the lowest sex ratio of 855 in the age group 0-6 among the three tahsils. Gandhi Nagar and Vivek Vihar Tahsils are totally urban and among urban areas of the tahsils again PreetVihar has recorded the highest sex ratio of 876 and Gandhi Nagar has recorded the lowest sex ratio of 855 in the 0-6 age group. Whereas Preet Vihar Tahsil includes rural area which recorded the lowest sex ratio of 716 for the rural population in the 0-6 age group. The overall sex ratio of 0-6 age group of the district is 871.

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Table-10 depicts the sex ratio of population in the age group 0-6 for the C.D. Block. The sex ratio of population in the age group 0-6 of this C.D. Block is lower than the sex ratio of total rural population of the State in the 0-6 age group, which are 716 and 852 respectively. The sex ratio of this age group is 136 points less than the sex ratio of the rural areas for the same age group of the State (852).

Sex ratio District (Rural):716				

Table-12 presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units. The Statutory Town DMC (U) falls in part in the district. The DMC (U) Part and all the Census Town falling in this district are constituent units of Delhi UA (Part). It is seen from the table that the urban areas of the district have recorded sex ratio of 871 in the age-group 0-6 which is 155 points more than the sex ratio of the rural areas of the district for the same age group (716). Amongst the constituents of the UA, the highest sex ratio is recorded in Gharonda Neemka Bangar alias Patpar Ganj CT (920) and the lowest is recorded in Gharoli CT (845).

Table-13 presents the number and percentage distribution of the Scheduled Castes population in all the three tahsils as recorded in Census-2011. In this district, the proportion of Scheduled Castes population in rural areas and urban areas are 1.61percentand 16.49percent respectively. Preet Vihar is the only tahsil which constitutes rural area of the district and has recorded 1.61 Percent of Schedule Caste Population. Gandhi Nagar and Vivek vihar Tahsils are totally urban. In the urban areas among the three tahsils the highest proportion of SC population is recorded (19.53 percent) in Preet Vihar Tahsil and the lowest (9.48percent) is in Gandhi Nagar Tahsil. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 13: Number and percentage of scheduled castes and scheduled tribes population in Sub-districts, 2011

Table-14 gives the number and percentage of Scheduled Castes population in the C.D. Block. As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and C.D. Block are the same. In this C.D. Block as well as rural areas of the district, SC population comprises 1.61percent of the total rural population of the district. In this district Preet Vihar is the only tahsil which has rural population. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-17 presents the number and percentage of Scheduled Castes population in the Urban Agglomeration, which falls in part in this district, and its constituent units. From the data given in the table it is seen that Scheduled Castes population in the urban areas constitutes 16.49percent of the total population. The proportion of Scheduled Castes population in the rural areas of the district is only 1.61percent. Amongst the constituent units of the UA, the highest percentage of Scheduled Castes population is recorded in Dallo Pura Census Town (38.54) and the lowest is in Chilla Saroda Khadar Census Town (4.0).In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-19 depicts the sex ratio amongst Scheduled Castes in UA (Part) and its constituent units. It is seen from the data that sex ratio of the Scheduled Castes population is 901 in the urban areas of the district. This is 577 points less than the sex ratio of SC population of the rural areas of the district (1478). Amongst the constituent units of the UA, Dallo Pura Census Town has recorded the highest sex ratio of whereas and Shakar Pur Baramad Census Town has recorded the lowest sex ratio of 759. The Statutory Town DMC (U) which falls in part in the district has recorded a sex ratio of 900. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-20 presents the number of literates, illiterates and percentage of literates by tahsils. The table also presents the data relating to gap in male-female literacy rate. It is seen from the data given in the table that in rural areas of the district, literacy rate recorded is 96.35 for males and 92.73 for females. Whereas, in urban areas, it is 93.12 for males and 84.97 for females. Amongst the tahsils of the district Preet Vihar Tahsil has recorded literacy rate of 93.19 for males which is the highest whereas Vivek Vihar Tahsil has recorded the lowest male literacy rate (92.85). In the case of females, Gandhi Nagar Tahsil has recorded the highest literacy rate (87.59) whereas Preet Vihar Tahsil has recorded the lowest (83.78). The rural areas of Preet Vihar Tahsil have recorded the highest literacy rate for both males (96.35) and females (92.73). As for the gap in male-female literacy rate, the gap in the case of urban areas ranges from 9.41 (Preet Vihar Tahsil) to 5.54 (Gandhi Nagar Tahsil). In the case of rural areas the gap is 3.62 in Preet Vihar Tahsil.

Table-21 gives the number of literates illiterates and percentage of literates by sex in the C.D. Block. It is seen from the table that the literates in the C.D. Block constitute 94.61percent. Out of this the proportion of male literates works out to 96.35 percent whereas female literates accounted for 92.73 percent. The gap in male-female literacy rate is 3.62.The gap in male-female literacy rate for the entire district is 8.14, which is 4.52 points more than from the gap of literacy rate of the C.D. Block.

Literacy rate for District:	94.61			

Table-23 presents the number of literates and illiterates, percentage of literacy rate by sex in Urban Agglomeration (Part) and its constituent units as recorded in Census, 2011. The table also gives the gap in male-female literacy rates in the UA and its constituents. It is seen from the table that in the urban areas of the district, there is a gap of 8.15 points in the male and female literacy rates. In the case of rural areas, a gap of 3.62 points is recorded in male and female literacy rates. A comparison of the male and female literacy rates indicates that amongst males, the highest literacy rate is recorded in Kondli Census Town (95.97) whereas in the case of females, the highest literacy rate is recorded in DMC (U) Part (86.47). The lowest literacy rate is recorded in Shakar Pur Baramad Census Town in both the cases of males(47.48) and females (24.94).

Table-24 presents the number of literates, illiterates and percentage of literacy rate amongst Scheduled Castes by sex as recorded in this C.D. Block. The SC literacy rate of this C.D. Block is 96.36. In this C.D. Block SC male literacy rate is 100 percent and that of female is 93.75 percent. The gap in male-female literacy rate is 6.25.

Table-26 presents the number of literates, illiterates and percentage of literates amongst Scheduled Castes by sex in towns. It is seen from the table that in the case of males, the highest literacy rate is recorded in Kondali CT (93.75). Whereas the lowest literacy rate for males is recorded in Shakar Pur Baramad CT (42.31). In the case of females, the highest (75.71) and lowest (31.25) literacy rate are recorded in Kondli and Shakar Pur Baramad CTs respectively. The gap in male-female literacy rate recorded in the district is ranges between 11.06 and 18.17.

Table 27 to 29 relate to Scheduled Tribe Population which are not applicable to the State.

Table-30 Presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils of the district. In this district 33.91percent are Workers. Main Workers and Marginal Workers constitute 32.47 and 1.44 percent respectively. In the case of males 53.66 percent are reported as workers. In case of females only 11.57percent are reported as workers. Among the three tahsils, Gandhi Nagar has recorded the highest male workforce, (54.92 percent), and Preet Vihar has recorded the lowest percent of male workers(53.06percent). The proportion of female workforce ranges between 8.90 percent(Gandhi Nagar Tahsil) and 12.42percent (Preet Vihar Tahsil).

Table-31 depicts the distribution of Main Workers, Marginal Workers and Non-Workers by sex in the C.D. Block. As stated earlier, the rural components (including Census Towns which are otherwise villages from the revenue point of view) of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same. It is seen from the table that in this C.D. Block, 57.07percent males and 17.14percentfemales have been recorded as Workers. The proportion of Main Worker sand Marginal Workers for males works out to 56.05 and 1.02 percent respectively, whereas for females there are only 16.36 and 0.78 percent respectively. Non-workers constitute 61.81percent. Amongst them, males constitute 42.93 percent and females constitute 82.36percent.

Table-32 presents the number and percentage of main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given in the table, it is seen that the total male workforce in the urban areas of the district constitutes 53.65 percent of total male population whereas the female workforce constitutes only 11.55 percent. Amongst the males, 51.74percent are Main Workers and 1.91percent are Marginal Workers. In the case of females, Main and Marginal Workers are 10.64 and 0.91 percent respectively. Amongst the constituent units of the UA, the highest percentage of male workers has recorded in Chilla Saroda Khadar CT (58.37) whereas the lowest percentage of male workers has recorded in Gharoli CT (51.51). In case of females, the highest workforce is recorded in Chilla Saroda Khadar CT (33.33 percent) and lowest workforce is recorded in Kondli CT (9.53 percent). The composition of Main and Marginal Workers is almost the same in all the constituent units of the UA.

Table-33 presents the distribution of Workers into four broad categories viz., Cultivators, Agricultural Labourers, House hold Industry Workers and Other Workers, as recorded in Census-2011. In this district, out of total 33.90percent workers, majority of both male and female workers (99.27percent) fall under the Household Industry (HHI)and Other Workers (OW) categories. The agrarian workers (Cultivators + Agricultural Labourers) form a negligible proportion (only 0.73 percent). Cultivators are 0.20 whereas Agricultural Labourers are 0.53 Percent. A comparison of the data amongst the tahsils would indicate that the proportion of males under OW category ranges from 94.35 percent (Gandhi Nagar Tahsil) to 96.55 per cent (Vivek Vihar Tahsil). In the case of females, it ranges from 94.25percent (Gandhi Nagar Tahsil) to 96.85percent (Vivek Vihar Tahsil).The proportion of female workers (3.00 percent) engaged in HHI is slightly less than that of males (3.44 percent). Tahsil wise, Gandhi Nagar Tahsil has recorded the highest percentage of female HHI workers (4.30) and Vivek Vihar Tahsil has recorded the lowest (2.52).

Table-34 presents the distribution of workers by sex into four categories of workers in this C.D. Block. It is seen from the table that Other Workers constitute the majority (91.47 percent). In this category Males constitute 91.05 percent which as females constitute 93.01 percent. Females (5.24 percent) have been reported as engaged in cultivation than males (1.13 percent). The proportion of female Agricultural Labourers (AL-0.35 percent) and Household Industry (HHI) Workers (1.40 percent) is lower than that of males (AL-1.98 percent and HHI-5.84 percent).

Table 34: Distribution of workers by sex in four categories of economic activity in CD blocks, 2011

Table-35 Depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units. From the table it is evident that in the case of males, only 0.63 percent workers are engaged in agricultural pursuits. In the case of females, this proportion works out to 1.21 percent. Household Industry workers constitute only 3.44 percent in the case of males and 3.0 percent in the case of females. In the 'Other Workers' category, males constitute 95.93 and females constitute 95.78 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the UA (Part) reveal, that the majority of workers fall in the 'Other Workers' category.

NOTE: Table 36to45 represent brief analysis of the village Directory and Town Directory. The non-Census data presented in the table have been collected from different departments/agencies and revenue authorities.

Table-36 Depicts the distribution of villages according to availability of different amenities. It is seen from the table that there is only one village in the CD Block of East District. Facilities of Education, Medical, Drinking Water, Post Office, Telephone, Transport Communications, Banks, Approach by Pucca Road and Power Supply are available in this Village . The facility of agricultural credit societies is not available in this village.

Table 36: Distribution of villages according to availability of different amenities, 2011												
S r . N o .	Name of CD Block	Numb er of inhabi ted village s	Type of amenity available

@ Bank includes Commercial Bank and Cooperative Bank.												
*Telephone includes Telephone,PCO and Mobile.												

Table-38 depicts the distribution of villages not having certain amenities, arranged by distance ranges from the places where these facilities are available. It is seen in the table that there is only one village in the CD Block. The residents of this village have to travel a distance of less than 5 Kms. for both Middle School and Degree level education. Similarly the facility of Hospital, Primary Health Centre (PHC), Co-operative Bank and Agricultural credit society are not available to the residents of this village and they have to travel a distance of less than 5 Kms. to avail these facilities.

Table 38: Distribution of villages not having certain amenities, arranged by distance ranges from the places where these are available, 2011					
Village not having the amenity of		Distance range of place from the villages where the amenity is available			
		Less than 5 kilometres	5-10 kilometres	10+ kilometres	Total (Col. 2-4)

Degree college includes Art, Engineering and Medicine					

Hospital includes Allopathic & Alternative Medicine		
Post office includes post office, telegraph office and post & telegraph office		
Telephone includes Telephone, PCO and mobiles		
Bus includes private and public		

Table-39 gives the distribution of villages according to the distance from the nearest Statutory Town and availability of different amenities in the villages of this C.D. Block. As there is only one village in this district and that is located in close proximity to Statutory Town DMC (U). The distance of the village from the nearest town is reckoned from the Town Hall which is the headquarter of the Statutory Town. It is seen from the table that the village of this C.D. Block falls in the distance range of Unspecified from the nearest Statutory Town. In the said distance range the amenities like Education, Medical, Post Office, Telephone, Transport Communications, Banks and Approach by Pucca Road are available to the entire population of this CD Block. The facility of agricultural credit societies is not available in this CD Block.

Table 39: Distribution of villages according to the distance from the nearest statutory town and availability of different amenities, 2011

Table-40 depicts the distribution of villages according to population range and availability of amenities. In the table, villages have been classified into six population ranges. The data reveals that there is only one village in this district and that falls in the population range of 2000-4999. All the amenities like Education, Medical, Improved Drinking Water, Post Office, Telephone, Transport Communications, Banks, Approach by Pucca Road and Power Supply are available in this village. But, the facility of Agricultural Credit Societies is not available in this village.

1	0004-East	1	26.70	0.00	0.00
	Total	1	26.70	0.00	0.00
Note:- Cultivable area= irrigated area + unirrigated area					

Table 42 Reflects that highest no. of Primary schools are reported in Pat Pur Gang (CT) which is 2.11 per 10,000 populations among all 7 towns. Similarly highest number of Middle school is in Pat Pur Gang (CT) which is 1.58 per 10,000 population. Highest number of Secondary/Matriculation school and Senior secondary school are in Kandli (CT), Pat Pur Gang (CT), respectively per 10,000 population among all 7 towns. As against highest number of School/College, the lowest no. of Primary school is reported in Chilla Saroda Bangar (CT) with 0.36instituteper 10,000 populations among all 7 towns. Similarly the lowest numberof middle school is in Dallopura (CT) which is 0.26 per 10,000 populations among 7 towns. The lowest number of Secondary/Matriculation school and Senior secondary school is in Dollopura (CT) having 0.26 and 0.13 institutes per 10,000 population.

DISTRICT: NEW DELHI

Table-1 presents the decadal change in population of all the three tahsils of the district during 2001- 2011. New Delhi district is totally urban. In this district the population growth is negative (-20.7%) during 2001-2011. All the three tahsils have recorded a negative growth. Connaught Place has recorded the highest negative growth of 37.3, whereas Chanakya Puri and Parliament Street has recorded a negative growth of 18.2 and 11.4 respectively during the decadal.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011												
Sl.No.	Tahsil	Population						Percentage decadal variation 2001-2011			Percentage urban population	
		2001			2011

* Recast data as per jurisdiction of Census 2011												

Table-2 is not applicable to this district as it is totally urban.

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. It is evident from the table that there is no change in the Statutory Towns/Census towns falling in this district. It is also seen from the table that no town is de-notified, declassified and wholly merged with other towns in Census 2011.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census												
District Name: New Delhi (05)												
(a)	New											
	(i) Statutory town											Nil
	(ii) census town											Nil
(b)	Denotified											
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.											Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.											Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.											Nil
©	Declassified											Nil
(d)	Wholly merged with other town(s).											Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.												

Table-4 presents the sex ratio of the State and the district from 1901 to 2011. In 2011 Census, the NCT of Delhi comprised nine districts. The data for the district from 1961 to 2001 is based on recast data as per the jurisdiction of the 2011 Census. Recast data at district level for 1901 to 1951 is not available. The data of sex ratio is not consistent in Delhi as well in the district. New Delhi district is fully urban so the rural sex ratio for period 1961-2011for this district is not applicable. The table presents a comparative picture of the sex ratio.

Table 4 : Sex Ratio of State and District, 1901-2011

Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of all the three tahsils of the district Connaught Place Tahsil has recorded the highest sex ratio (856) where as Chanakya Puri Tahsil has recorded the lowest (805). The sex ratio of the district is 822.

Table 5: Sex ratio by Sub-district, 2011

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and Towns as recorded in Census-2011. As per Census-2011, there is only one UA with its 110 constituent units. Of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts and the NDMC is spread over in four districts. As a result of this peculiar situation, the Delhi UA is appearing in parts in this district. The sex ratio of NDMC Part (826) is 174 point higher than the sex ratio of DMC(U) Part (652).

Table-9 presents the sex ratio of population in the age group 0-6 for all the three tahsils of the district as recorded in Census 2011. New Delhi district is totally urban. Connaught Place Tahsil has recorded the highest sex ratio (933) whereas it is lowest in the Parliament Street Tahsil (874) in the age group 0-6. The sex ratio of this age group for the entire district is recorded as 894.

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Sex ratio District (Rural):0				

Table-12 presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituents units. The Statutory Towns DMC(U) and NDMC fall in parts in this district. The district is totally urban. Both the Statutory Towns are also the constituent units of Delhi Urban Agglomeration (Part). It is seen from the table that the Urban Agglomeration (Part) of the district has recorded a sex ratio of 894 in the age-group 0-6. This is 28 points more than the sex ratio of total urban areas of the State (870) for the same age group. Amongst the constituents of the UA falling in parts, the highest sex ratio (916) in the age group 0-6 is recorded in DMC(U) Part where as the lowest sex ratio (893) in the age group 0-6 is recorded in NDMC (Part).

Table-13 presents the number and percentage distribution of the Scheduled Castes population in all the three tahsils as recorded in Census-2011. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. It is seen from the table that the percentage of Scheduled Castes population recorded in New Delhi district is 23.41. Amongst the three tahsils of the district, Chanakya Puri Tahsil has recorded the highest percentage of SC Population (24.59) and it is lowest in Connaught Place Tahsil (19.6).

Table-17 presents the number and percentage of Scheduled Castes in Urban Agglomeration (Part) and its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. From the data given in the table it is seen that Scheduled Castes population in urban areas constitute 23.41 percent of the total population. Amongst the constituent units, the highest percentage of Scheduled Castes population (25.49) is recorded in Statutory Town DMC (U) Part and the lowest (23.37) is in Statutory Town NDMC (Part).

Table 17: Number and percentage of scheduled castes and scheduled tribes population in towns, 2011

Table-20 presents the number of literates, illiterates and percentage of literates by tahsils. The data relating to gap between male and female literacy rate has also been presented. This district is totally urban and the literacy rate recorded in the district is fairly good. It is seen from the table that the district has recorded literacy rate of 92.24 for males and 83.56 for females. Tahsilwise, Parliament Street tahsil has recorded the highest male literacy rate of 93.53 whereas Chanakya Puri tahsil has recorded the lowest male literacy rate (91.12). In case of females, highest literacy rate (84.91) is recorded in Parliament Street Tahsil and the lowest (81.78) is in Chanakya Puri tahsil. The gap in male and female literacy rate in the district is 8.68 and tahsilwise it ranges from 7.46 to 9.34.

Table-26 presents the number of literates and illiterates and percentage of literates amongst the Scheduled Castes by sex in towns as recorded in Census-2011. The table also presents the gap in males and females literacy rate for scheduled caste population. It is seen from the table that the highest literacy rate in the case of males (88.45) and in the case of females (73.14) for scheduled caste population is recorded in Statutory Town NDMC (Part). The lowest literacy rate for males (83.46) and females (64.2) for scheduled caste population have been recorded in Statutory Town DMC (U) Part. The gap in male-female literacy rate recorded amongst Scheduled Castes population is 15.36 in the district.

Tables-27, 28 and 29 relate to Scheduled Tribes. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in all the three tahsils of the district as recorded in Census-2011. In this district, 41.93 percent are Workers. Out of these, 39.77 percent are Main Workers and 2.16 are Marginal Workers. Female workforce constituted 19.67 percent. In the district. In the three tahsils of the district the proportion of male workforce ranges between 58.50 percent (Parliament Street tahsil) and 61.97 percent (Connaught Place tahsil). Whereas the proportion of female workforce ranges between 17.71 percent (Parliament Street tahsil) and 25.26 percent (Connaught Place tahsil).

Table-31 is not applicable as this district is totally urban.

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given in the table it is seen that the total male workforce in the district constitutes 60.22 percent whereas the female workforce constitutes only 19.67 percent. Amongst the males, 57.63 percent are Main Workers and 2.60 percent are Marginal Workers. In case of females, Main and Marginal Workers constitute 18.04 and 1.63 percent respectively. Amongst the two constituent units, the highest male workers (62.03 percent) has recorded in DMC (U) Part whereas the lowest percentage of male workers (60.18) has recorded in NDMC (Part). In case of females the highest (19.79 percent) workforce is recorded in NDMC (Part) and the lowest workforce (12.78 percent) is recorded in DMC (U) Part.

Table 32: Number and percentage of main workers, marginal workers, and non-workers by sex in towns, 2011											
Sr. No.	Name of town	Persons / Males/ Females	Total population	Main workers		Marginal workers		Total workers (main and marginal workers)		Non workers

Table-33 given presents the distribution of Workers by sex into four broad categories viz. Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers in the district as recorded in Census-2011. It is seen from the table that Cultivators and Agricultural Labourers constitute a negligible percent. The percentage of Household Industry workers in the district is also very low (1.73). In Other Workers (OW) category 97.89 percent workers are males and 96.56 percent workers are females. Among the three tahsils of the district, the proportion of male workers in the OW category ranges between 96.14 percent (Connaught Place tahsil) and 98.51 percent (Chanakya Puri tahsil). In contrast, the proportion of female workers in OW category ranges between 94.53 percent (Connaught Place tahsil) and 98.02 percent (Parliament Street tahsil). The proportion of male HHI workers ranges between 0.94 percent (Chanakya Puri tahsil) and 3.18 percent (Connaught Place tahsil) and that of females Household Industry workers ranges between 1.12 percent (Parliament Street tahsil) and 4.50 percent (Connaught Place tahsil).

Table-34 is not applicable to this district as it is totally urban.

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units. It is seen that in case of males, only 0.59 percent workers are engaged in agricultural pursuits. In case of females, this is 0.94 percent. Household Industry workers constitute only 1.52 percent in case of male population and 2.50 percent in case of female population. In the other worker category, males constitute 97.89 percent and females constitute 96.56 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the Urban Agglomeration (Part) reveals that the majority of workers fall in the other worker category.

Tables-36 to 45 are based on Village Directory data. This district is totally urban. As such, these tables are not applicable for this district.

DISTRICT: CENTRAL

Table-1 presents the decadal change in population of all the three tahsils of Central district during 2001-2011. Central district is totally urban. The district has recorded a negative growth (-9.9 percent) of population during 2001-2011. The increase in commercial areas and shifting of families to other residential areas may lead to the negative growth. All the three tahsils have recorded negative growth. Darya Ganj tahsil has recorded a negative growth of 12.1 percent whereas Karol Bagh and Pahar Ganj tahsils have recorded negative growth of 2.6 and 11.7 percent respective.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011												
Sl. No.	Tahsil	Population						Percentage decadal variation 2001-2011			Percentage urban population

* Recast data as per jurisdiction of Census 2011.												

Table-2 is not applicable to this district as it is totally urban.

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns. It is evident from the table that there is no change in the Statutory Towns/Census Town fallings in this district. it can be observe from the table that no town has been de-notified, declassified or wholly merged with other town(s) in this district in census 2011.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census									
District Name: Central (06)									
(a)	New								
	(i) Statutory town								Nil
	(ii) census town								Nil
(b)	Denotified								
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.								Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.								Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.								Nil
(c)	Declassified								Nil
(d)	Wholly merged with other town(s).								Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.									

Table-4 presents the sex ratio of the State and the district from 1901-2011. In 2011 Census, the N.C.T. of Delhi comprised nine districts. The data for the district for 1961 to 2001 is based on recast data as per the jurisdiction of the 2011 Census. Recast data at district level for 1901 to 1951 is not available. Much difference in sex ratio of Delhi has been noticed from one Census to another. The table below presents a comparative picture of the sex ratio of the district in each common from 1901 to 2011.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: Central(06)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740

1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	Central	797	-	797
1971	Delhi	801	825	798	Central	820	-	820
1981	Delhi	808	810	808	Central	844	-	844
1991	Delhi	827	807	830	Central	872	-	872
2001	NCT of Delhi	821	810	822	Central	842	-	842
2011	NCT of Delhi	868	852	868	Central	892	-	892
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of all the three tahsils as the district as recorded in Census-2011. The district is totally urban. The sex ratio of Karol Bagh tahsil has recorded the highest sex ratio (909) which is also more than the sex ratio of the district (892). The lowest sex ratio (878) is recorded in Pahar Ganj tahsil.

Table 5: Sex ratio by Sub-district, 2011

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and Towns as recorded in Census-2011. As per Census-2011, there is only one UA with its 110 constituent units. Out of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts and the Statutory Town NDMC is spread over in four districts. As a result of this peculiar situation, the Delhi UA is appearing in parts in this district. Delhi UA has recorded a sex ratio of 868. The urban sex ratio of this district is 892. The sex ratio recorded in DMC (U) Part and NDMC (Part) are 892 and 874 respectively.

Table 8: Sex ratio of towns, 2011			
Sr. No.	Name of town	Urban status of town	Sex ratio

	Sex ratio (Urban) district:		892

Table-9 presents the sex ratio of population in the age group 0-6 for all the three tahsils of the district as recorded in Census 2011. The district is totally urban. The sex ratio of 0-6 age group of Darya Ganj tahsil presents a fairly good picture, where it has record as 947. The lowest sex ratio (843) of this age group has been recorded in Karol Bagh tahsil. The overall sex ratio of the district in the age group 0-6 is 905.

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Table-12 presents the sex ratio of population in the age group 0-6 of Urban Agglomeration (Part) and its constituents units. It is seen from the table that the district has recorded a sex ratio of 905 in the age group 0-6. Amongst the two constituents of the UA which are falling in parts, the highest sex ratio (982) is recorded in NDMC Part. Whereas the lowest sex ratio (905) in the age group 0-6 is recorded in DMC (U) Part.

Table-13 presents the number and percentage distribution of the Scheduled Castes population in all the three tahsils as recorded in Census-2011. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. As already stated the district is totally urban. It is seen from the table that the percentage of Scheduled Castes population recorded in this district is 24.59. A comparison of data in the tahsils of the district reveals that the highest percentage (43.45) of Scheduled Castes population is recorded in Karol Bagh Tahsil and the lowest (11.14) is in Darya Ganj tahsil.

Table-17 presents the number and percentage of Scheduled Castes in Urban Agglomeration (Part) of its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. The Statutory Towns DMC (U) and NDMC which fall in parts, are the constituent units of Delhi Urban Agglomeration (Part). It is seen from the data given in the table that Scheduled Castes population in this district constitutes 24.59 percent of the total population of the district. Amongst the constituent units, the highest percentage (24.66) of Scheduled Castes population is recorded in DMC (U) Part and the lowest (9.86) is recorded in NDMC (Part). The percentage of Scheduled Castes population recorded in the Delhi UA (Part) is 24.59.

Table-18 is not applicable to this district as it is totally urban.

Table-19 presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units of the district. It is seen from the table that sex ratio of the Scheduled Castes population in this district is 941. Amongst the constituent units of the Urban Agglomeration of the district, Statutory Town DMC (U) falling in part has recorded the highest sex ratio of 941 and Statutory Town NDMC which is also falling in part has recorded the lowest sex ratio of 781. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 19: Sex ratio among scheduled castes and scheduled tribes in towns, 2011

Table-20 presents the number of literates, illiterates and percentage of literates by tahsils. Data relating to gap in male-female literacy rate has also been presented. As stated earlier, the district is totally urban. The literacy rate recorded in this district is fairly good. Literacy rates of 87.5 for males and 82.49 for females have recorded in this district. Tahsilwise, the highest male literacy rate (93.84) is recorded in Karol Bagh tahsil and the lowest (84.01) is in Darya Ganj tahsil. In the case of females, the highest (88.01) and lowest (80.04) literacy rate are recorded in Karol Bagh and Pahar Ganj tahsils respectively. The gap in male and female literacy rates in the district is 5.01. The gap in male-female literacy rate in tahsils ranges between 2.84 (Darya Ganj tahsil) and 7.88 (Pahar Ganj tahsil).

Table-23 presents the number of literates illiterates, percentage of literates and gap in male - female literacy rates in Urban Agglomeration (Part) and its constituent units. It is seen that there is a gap of 5.01 points in the male and female literacy rate in the district. A comparison of the male and female literacy rates indicates that the highest literacy rate for both males (91.89) and females (89.58) are recorded in Statutory Town NDMC which falls in part. The lowest literacy rate is recorded in Statutory Town DMC (U) Part in both the cases of males (87.47) and females (82.45).

Table-26 presents the number of literates, illiterates and percentage of literates among Scheduled Castes by sex in towns as recorded in Census-2011. It is seen from table that the literacy rate for males among Schedule Caste population in Statutory Towns NDMC (Part) and DMC(U) Part recorded are 91.72 and 88.37 respectively. In the case of females, the literacy rate is 76.54 in DMC(U) Part and 90.52 in NDMC Part. The gap in male-female literacy rate recorded in DMC (U)(Part) is 11.83 whereas in case of NDMC (Part) it is 1.2.

Tables-27, 28 and 29 are related to Scheduled Tribes population. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils. The population of this district has recorded 35.61 percent as Workers. Out of them, 33.65 percent are Main Workers and 1.96 percent are Marginal Workers. Tahsil wise, the proportion of male workforce ranges between 57.16 percent (Pahar Ganj tahsil) and 58.45 percent (Karol Bagh tahsil). The proportion of female workforce in the three tahsils ranges between 8.38 percent (Darya Ganj tahsil) and 15.04 percent (Karol Bagh tahsil). Non workers in the three tahsils fall in the range between 62.22 and 65.56 percent.

Table-31 is not applicable to this district as it is totally urban.

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. It is seen that the total male workforce in the district constitutes 57.70 percent of total male population whereas the female workforce constitutes only 10.84 percent. Amongst the males, 55.21 percent are Main Workers and 2.49 percent are Marginal Workers. Where as In case of females, Main and Marginal Workers constitute 9.48 and 1.36 percent respectively. Amongst the constituent units, the highest male workers (61.18 percent) have recorded in the Statutory Town NDMC falling in (part) whereas the lowest male workers (57.69 percent) have been recorded in Statutory Town DMC(U) part. In the case of females, the highest (17.51 percent) and the lowest (10.81 percent) workforce is recorded in Statutory Towns NDMC (Part) and DMC(U) (Part) respectively.

Table-33 presents the distribution of Workers by sex into four broad categories viz, Cultivators Agricultural Labourers, Household Industry Workers and Other Workers as recorded in Census-2011. Cultivators and Agricultural Labourers constitute a negligible percent in this district. The percentage of Household Industry workers in the district is 5.26. Under Other Workers (OW) category male constitute 94.28 percent and females constitute 93.49 percent. In this district 5.33 percent females and 5.25 percent males are reported to

be engaged in Household Industry. Amongst the three tahsils of the district, the proportion of male workers in the other worker category ranges from between 93.99percent (karolbag tahsil)and 94.49percent(Pahar ganj)tahsil and the proportion of females in the other worker category ranges between 90.67 percent (Darya Ganj tahsil) and 95.71 percent (Karol Bagh tahsil). The proportion of male Household Industry workers is the lowest (5.06 percent) in Darya Ganj tahsil and the highest (5.75 percent)is in Karol Bagh tahsil. Where as In case of females Household Industry Workers, it is the highest (7.06 percent) in Darya Ganj tahsil and the lowest (3.87 percent)is in Karol Bagh tahsil. The proportion of Household Industry Workers in the district is (5.26 percent).

Tables-34 is not applicable to this district as it is totally urban.

Table-35 depicts the data pertaining to distribution of workers by sex into four categories in Urban Agglomeration (Part) and its constituent units. From the table, it is seen that in case of males only 0.47 percent workers are engaged in agricultural pursuits. In case of females, this proportion works out to 1.19 percent. Household Industry workers constitute only 5.25 percent in case of males and 5.33 percent in case of females. In the other worker category, males constitute 94.28 percent and females constitute 93.49 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the Urban Agglomeration (Part) reveal that the majority of workers fall in the other worker category.

Tables-36 to 45 are based on Village Directory data. This district is totally urban. As such, these tables are not applicable for this district.

DISTRICT: WEST

Table-1 presents the decadal change in population of all the three tahsils in the district West during 2001-2011. West district has recorded a decadal growth of 19.5 percent. In the rural areas of the district, it has declined by 92.6 percent whereas it has increased by 24.2 percent in urban areas. 7villages of this district have been treated as new Census Towns in 2011 which may have lead to the negative growth (-92.6 percent) in rural of the district. Tahsil-wise comparison of growth reveals that Punjabi Bagh Tahsil has recorded the highest growth of 34.5 percent and Rajouri Garden Tahsil has recorded the lowest (2.5 percent). Of the three tahsils, Rajouri Garden and Patel Nagar Tahsils are totally urban. In Punjabi Bagh Tahsil, the percentage of urban population recorded is 99.2 percent. In west district there was only Two villages which fall in Punjabi Bagh Tahsil.

Table-3 gives an idea about the new towns, towns denitrified, declassified and merged with other towns in Census 2011. The urban areas of Delhi comprised three Statutory Towns and 110 Census Towns. The number of Statutory Towns has remained the same since 1961 Census. It is evident from the above table that in 2011 Census, no new Statutory Town has been formed. However, 7 villages have been treated as new Census Towns in this district. No Statutory Town of 2001 Census was denitrified. None of the Census Towns of 2001 Census was notified as Statutory Town in 2011 Census. None of the towns of 2001 Census was also declassified or merged with other towns in census 2011.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census													
District Name: West (07)													
(a)	New												
	(i) Statutory town												Nil
	(ii) census town	Raja Pur Khurd (CT)Bapraula (CT)Tilang Pur Kotla (CT)Shafi Pur Ranhola (CT)Nilothi (CT)Bakkar Wala (CT)Tikri Kalan (CT)											7
(b)	Denotified												
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.												Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.												Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.												Nil
©	Declassified												Nil
(d)	Wholly merged with other town(s).												Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.													

Table-4 presents the sex ratio of the State and the district from 1901 to 2011. In 2001 Census, the NCT of Delhi comprised nine districts as against its uni-district status in the 1991 Census. The data for the district for 1961 to 2001 is based on recast data as per the jurisdiction of the 2011 Census. Recast data at district level for 1901 to 1951 is not available. Much difference in sex ratio of Delhi has been noticed from one Census to another. The table below presents a comparative picture of the sex ratio from 1901 to 2011.

Table 4 : Sex Ratio of State and District, 1901-2011								
istrict: West (07)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	West	807	829	805
1971	Delhi	801	825	798	West	834	830	834
1981	Delhi	808	810	808	West	830	807	831
1991	Delhi	827	807	830	West	848	824	850
2001	NCT of Delhi	821	810	822	West	830	758	834
2011	NCT of Delhi	868	852	868	West	875	914	875
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of all the there tahsils of the district in census 2011. The sex ratio of the district is 875. Patel Nagar Tahsil has recorded the highest (883) and Rajouri Garden Tahsil has recorded the lowest (858) sex ratio. A comparison of the sex ratio in rural and urban areas of the district reveals that it is higher (914) in rural areas as compared to the urban areas (875). Only the Punjabi Bagh Tahsil constitutes the rural areas which has recorded the sex ratio of 914.

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5

	Total	914

Table-7 presents the distribution of villages by the ranges of sex ratio. In the table, the sex ratio of the rural population has been given in nine ranges. The sex ratio of the rural areas of the district is comparatively high. There are two villages in this District. Out of these two villages one village (50 Percent) falls in the range of sex ratio 850-899 .The percentage distribution of population for this village is 58.93. The another village (50 Percent) falls in the range of sex ratio 900-949. According to the size of population the percentage distribution of population in this village is 41.07.

Sex ratio District (Rural):914				

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and towns as recorded in Census-2011. As per Census-2011, there is only one UA with its 110 constituent units. Of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC (U) is spread over in all the nine districts. As a result of this peculiar situation, Delhi UA is appearing in part in this district. Delhi UA Part has recorded a sex ratio of 880, which is highest and the lowest sex ratio is recorded in Tikri Kalan CT (764).

Table 8: Sex ratio of towns, 2011

Table-9 presents the sex ratio of population in the age group 0-6 for all the three tahsils of the district. Patel Nagar Tahsil has recorded the highest sex ratio of 875 in the age group 0-6 whereas Punjabi Bagh Tahsil has recorded the lowest (867). Rajouri Garden and Patel Nagar Tahsils are totally urban. In the Urban areas of the tahsils Patel Nagar Tahsil has recorded the highest sex ratio (875) and Punjabi Bagh Tahsil has recorded the lowest sex ratio (868) in the age group 0-6. The overall sex ratio of age group 0-6 of the district is 872. The sex ratio of rural areas of the district is 787 which is lower than the sex ratio of urban areas (872) of the district.

Table-10 depicts the sex ratio of population in the age group 0-6 for the C.D. Block. The sex ratio of population in the age group 0-6 of this C.D. Block is lower than the sex ratio of total rural population of the State, which are 787 and 852 respectively. The sex ratio of this age group is 65 points less than the sex ratio of the rural areas of the State (852).

Table 10: Sex ratio of population in the age group 0-6 for CD Blocks, 2011

Table-12 presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units. The Statutory Town DMC (U) falling in part and the eleven Census Towns of this district are the constituent units of Delhi UA (Part). It is seen from the table that the urban areas of the district have recorded sex ratio of 872 in the age-group 0-6 which is 85 points more than the sex ratio of the rural areas of the district (787) for the same age group. Amongst the constituents of the UA, the highest sex ratio is recorded in Raja Pur Khurd CT (951) and the lowest is recorded in Quammuruddin Nagar CT (829).

Table-13 presents the number and percentage distribution of the Scheduled Castes population in all the three tahsils of the district as recorded in Census-2011. The proportion of Scheduled Castes population in rural areas and the urban areas are 19.67 and 14.79 percent respectively. Patel Nagar and Rajouri Garden Tahsils are totally urban. In the urban areas, the highest proportion (20.48 percent) of SC population is recorded in Punjabi Bagh Tahsil (20.48 percent) and the lowest is in Rajouri Garden Tahsil (11.49 percent). Punjabi Bagh Tehsil constitutes both Urban and Rural population. The proportion of Scheduled Caste population in the rural area of the Tahsil Punjabi Bagh as well as of the district has recorded 19.67. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-14 gives the number and percentage of Scheduled Castes population in the C.D. Block. In this C.D. Block as well as the rural areas of the district, Scheduled Castes population constitutes 19.67 percent of the total population of the district. This proportion is 4.87 points higher than the proportion of Scheduled Castes population of the entire district (14.8 percent). As compared to urban areas, it is 4.88 points higher than the proportion of Scheduled Castes population of the urban areas of the district (14.79). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-17 presents the number and percentage of Scheduled Castes population in Urban Agglomeration (Part) and its constituent units. Statutory Town DMC (U) which falls in part and eleven Census Towns of this district are the constituent units of Delhi Urban Agglomeration (Part). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. It is seen from the data given in the table that Scheduled Castes population in the urban areas constitutes 14.79 percent of the total population. The proportion of Scheduled Castes population in the rural areas of the district is 19.67 percent. Amongst the constituent units of the UA, the highest percentage of Scheduled Castes population is recorded in Bakkar Wala Census Town and the lowest is in Quammruddin Nagar Census Town (8.18). The Schedule Caste population of DMC (U) Part constitutes 14.17 Percent of the total population.

	Total	937	0

Table-19 presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units. It is seen from the table that sex ratio of the Scheduled Castes population is 881 in the urban areas of the district. This is 56 points less than the sex ratio of SC population of the rural areas of the district (937). Amongst the constituent units of the UA, the highest sex ratio is recorded in Nilothi Census Town (909) and the lowest sex ratio is recorded in Tikri Kalan Census Town (762). The Statutory Town DMC (U) which falls in part in this district has recorded a sex ratio of 877.

Table-20 presents the number of literates, illiterates, and percentage of literates by tahsils and data relating to gap in male-female literacy rate as recorded in Census 2011. Literacy rate for males recorded in the district is 91 percent. This literacy rate is also equal to the literacy rate of urban areas of the district which is also 91 Percent. The literacy rate for males of the rural area of the district is 90.44 which is little less than that of the Urban areas (91 Percent). In the case of females, the literacy rate recorded in the district is 82.39. Female literacy rate in urban areas is higher (82.41) than that of rural areas (71). Amongst the tahsils, the male literacy rate of 91.89 in Patel Nagar Tahsil is the highest, whereas it is lowest in Rajouri Garden Tahsil (90.07). The female literacy rate is highest in Rajouri Garden Tahsil (84.42) and it is lowest in Punjabi Bagh Tahsil (79.34). The rural areas of Punjab Bagh Tahsil have recorded literacy rate less than that of the urban areas of the district for both males and females. Rajouri Garden and Patel Nagar Tahsils are fully urban. The gap in male-female literacy rate of the rural areas is 19.44 percent and that of urban areas is 8.59 percent in the District. The gap in male-female literacy rate in the rural areas of Punjabi Bagh Tahsil is quite distinct which is 19.44percent.

Table-22 presents the distribution of villages by literacy rate range as recorded in Census-2011. The villages have been categorised in twelve literacy rate ranges. In this district one village (50 percent) falls in literacy rate range of 71-80 while the remaining one village(50 percent) falls in the literacy range of 81-90. Rural areas of this district present a good picture of literacy.

Table-23 presents the number of literates, illiterates, and percentage of literates by sex in Urban Agglomeration (Part) and towns. The table also presents the gap in male-female literacy rate in the UA (Part) and its constituent units. It is seen that in the urban areas of the district, there is a gap of 8.59 points in the male and female literacy rates. In the case of rural areas, a gap of 19.44 points is recorded in male and female literacy rates. A comparison of the male and female literacy rates indicates that amongst males, the highest literacy rate is recorded in Qummrudin Nagar CT (92.55) whereas in the case of females, the highest literacy rate is recorded in the Statutory Town DMC (U) Part (84.86). The lowest literacy rate is recorded in Bakkar Wala CT (79.56) in the case of males and in the case of females it is recorded in Bakkar Wala Census Town (61.0).

Table-24 presents the number of literates, illiterates and percentage of literates by sex among Scheduled Castes population in this C.D. Block. This C.D. Block has recorded a literacy rate of 76.59 among Scheduled Castes. In the case of males, the literacy rate recorded is 88.01 whereas for females it is only 64.48, which is very low. The gap in male- female literacy rate in this C.D.Block is 23.53.

Table-26 presents the number of literates, illiterates and percentage of literates among Scheduled Castes population by sex in towns. It is seen from the table that the literacy rate for males recorded in Raja Pur Khurd CT is 89.11 which is the highest. The lowest literacy rate for males is recorded in Nilothei CT (75.15). In the case of females, the highest literacy rate is recorded in Mundka CT (69.24) whereas the lowest literacy rate is recorded in Bakkar Wala CT (57.43). The gap in male-female literacy rate ranges between 15.72 and 23.01. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

As such **Tables - 27, 28 and 29** relating to Scheduled Tribes are not being presented.

Table-30 Presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in all the three tahsils of the district as recorded in Census-2011. The total workforce in the district is 34.38 percent of which 33.01 percent are Main Workers and 1.36 percent are Marginal Workers. In this district, 54.02 percent males and 11.94 percent females are reported as Workers. Amongst the tahsils, the total workforce ranges between 33.04 percent (Punjabi Bagh Tahsil) and 37.37 percent (Rajouri Garden Tahsil). Among the tehsils the total male workers is highest in Rajouri Garden Tahsil (56.31 percent) and the lowest is in Punjabi Bagh Tahsil (52.90 percent). Similarly the female workforce ranges between 10.32 (Punjabi Bagh Tahsil) and 15.28 (Rajouri Garden Tahsil) percent.

Table-31 depicts the distribution of Main Workers, Marginal Workers and Non-Workers by sex in the C.D.Block. As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same. It is seen from the table that in this C.D. Block, 48.26 percent males and 7.41 percent females have been recorded as Workers. The proportion of Main Workers and Marginal Workers for males works out to 44.77 and 3.49 percent respectively, whereas for females, there are only 5.81 and 1.60 percent respectively.

Table 31: Number and percentage of main workers, marginal workers and non-workers by Sex in CD Blocks, 2011

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given it in the table, it is seen that the total male workforce in the urban areas of the district constitutes 54.03 percent of total male population whereas the female workforce constitutes only 11.95 percent. Amongst the males, 52.24 percent are Main Workers and 1.79 percent are Marginal Workers. In the case of females, Main and Marginal Workers constitute 11.08 and 0.87 percent respectively. Amongst the constituent units of the UA, the highest Percentage of male workers has been recorded in Statutory Town Tikri Kalan (55.33) whereas the lowest percentage of male workers has been recorded in Tilang Pur Kotla CT (47.61). In the case of females, the highest workforce is recorded in Statutory Town DMC(U) Part (13.90 percent). Whereas the lowest is recorded in Raja Pur Khurd CT (4.14 percent).

Table-33 presents the distribution of Workers into four broad categories viz., Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers in tahsils as recorded in Census-2011. In this district, 95.84 percent of workforce fall in 'Other Workers' (OW) and 3.32 Percent fall in Household Industry (HHI) workers category. Among all the four Categories the lowest participation of Male and Female is in Cultivator Category which are 0.32 Percent and 0.41 Percent respectively.. Amongst the tahsils of the district, the proportion of males in the OW category ranges between 95.17 percent (Punjabi Bagh Tahsil) and 96.24 percent (Patel Nagar Tahsil). In the case of females, their proportion ranges between 94.03 percent (Punjabi Bagh Tahsil) and 97.55 percent (Rajouri Garden Tahsil). The proportion of males engaged in HHI ranges between 3.20 percent (Punjabi Bagh Tahsil) and 3.77 percent (Rajouri Garden Tahsil). In the case of females, it ranges between 2.00 percent (Rajouri Garden Tahsil) and 3.88 percent (Punjabi Bagh Tahsil).

Table-34 presents the distribution of Workers by sex into four categories of Workers in this C.D. Block. It is seen from the table that in both the cases of males and females, Other Workers constitute the majority. Males in this category constitute 75.42 percent and females constitute 85.46 percent. More males (18.47 percent) have been reported as engaged in cultivation than females (7.05 percent). The proportion of female Agricultural Labourers (AL-6.17 percent) and Household Industry (HHI) Workers (1.32 percent) are also higher than that of males (AL-5.44 percent, HHI-0.68 percent).

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its constituent units. From the table, it is evident that in the case of males, only 0.75 percent workers are engaged in agricultural pursuits. In the case of females, this proportion works out to 0.98 percent. Household Industry workers constitute only 3.36 percent in the case of males and 3.13 percent in the case of females. In the Other Workers category, males and females constitute 95.88 and 95.89 percent respectively of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the UA reveal that a majority fall in the Other Workers category.

NOTE: Table 36 to 45 represent brief analysis of the village Directory and town Director. The non-Census data presented in the table have been collected from different departments/agencies and revenue authorities.

Table-36 depicts the distribution of villages according to availability of different amenities. It is seen from the table that there are only two villages in this district. Facilities like Education, Medical, Drinking Water, Telephone, Agricultural Societies, Approach by pucca road and power Supply are available in both the villages which constitute 100.0percent of the total villages. Post Office and Transport communication facilities are available in only 1 (50 percent) village. None of the villages has banking facility.

Table 36: Distribution of villages according to availability of different amenities, 2011												
Sr. No.	Name of CD Block	Number of inhabited villages	Type of amenity available

Note :-												
* Education includes all education facilities.												
^ Medical includes all medical facilities.												
# Post office includes post office, telegraph office and Post and telegraph office.												
§ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
** Telephone includes Telephone, PCO and Mobile.												

Table-37 gives an idea about the number and percentage of rural population served by different amenities. It is encouraging to note that basic facilities like Education, Medical, drinking water, Telephone, Agricultural Credit Societies, approach by pucca road and power supply are available to cent percent rural population. Only the facility of Transport Communication is available to 41.07 percent of the total population of the villages. Bank facility is not available to the population of this C.D. Block.

Table 37: Number and percentage of rural population served by different amenities, 2011												
Sr. No.	Name of CD Block	Total population of inhabited villages	Type of amenity available

Note:-												

*	Education includes all education facilities.
^	Medical includes all medical facilities.
#	Post office includes post office, telegraph office and Post and telegraph office.
\$	Transport communication includes bus service, rail facility and navigable waterways.
@	Bank includes Commercial Bank and Cooperative Bank.
**	Telephone includes Telephone, PCO and Mobile.

Table-38 depicts the distribution of villages not having certain amenities, arranged by distance ranges from the places where these facilities are available. Residents of 1 village do not have middle school and they have to travel a distance of less than 5 Kms. to avail this facility. The facility of Hospitals and Primary Health Centre (PHC) are not available to both the villages and the residents of these villages have to travel a distance of 5 to 10 Kilometres to avail these facilities. Post Office and Bus service Facilities are not available to the residents of one village and to avail these facilities they have to travel a distance of less than 5 Kms. Commercial Bank and Co-operative Bank facility are not available to any of the villages. To avail this facility the residents of these villages have to travel a distance of less than 5 Kms.

Table 38: Distribution of villages not having certain amenities, arranged by distance ranges from the places where these are available, 2011					
Village not having the amenity of		Distance range of place from the villages where the amenity is available

Telephone includes Telephone, PCO and mobiles					
Bus includes private and public					

Table-39 gives the distribution of villages according to the distance from the nearest Statutory Town and availability of different amenities in the villages. All the 2 villages in this C.D. Block fall in the distance range of 5 - 15 Kms. from the nearest Statutory Town. The distance of the villages from the Statutory Town has been reckoned from the headquarters of the Statutory Town, i.e., Town Hall. Facilities like Education, Medical, Telephone, Agricultural credit society and approach by pucca road are available to all the 2 villages Post office and Transport Communication facilities are available to 1 village. None of the villages has banking facility.

Table 39: Distribution of villages according to the distance from the nearest statutory town and availability of different amenities, 2011

Table-40 depicts the distribution of villages according to the population ranges and availability of amenities. In this table, villages have been classified into six population ranges. The data in the table reveals that there are only 2 villages in this district and both the villages fall in the population range of 2000 – 4999. Amenities like Education, Medical, improved drinking water, Telephone, Agricultural Credit Societies, Approach by pucca road and Power Supply are available in both the villages. The post office and Transport Communication facility is available in one village falling in the same population range of 2000-4999. None of the villages has the banking facility.

Table 40: Distribution of villages according to population range and amenities available, 2011

DISTRICT: SOUTH WEST

Table-1 presents the decadal change in population of tahsils in the district South West during 2001-2011. This district has recorded a decadal growth of 30.6 percent in totality, -36.3 percent in rural and 40.5 percent in urban areas. Amongst the tahsils, the highest growth of 49.8 percent is recorded in Najafgarh Tahsil, Vasant Vihar Tahsil has recorded the growth rate of 19.7 and Delhi Cantonment has recorded -6.9 Percent decadal growth. In this district, 93.7 percent population resides in urban areas. Tahsil level comparison of data of percentage of urban population reveals that while 100 percent of population of Vasant Vihar and Delhi Cantonment Tahsils resides in the urban areas, it is 89.5 percent in the case of Najafgarh Tahsil.

Table 1: Decadal change in population of Tahsils by residence, 2001-2011

Table-2 presents the number and percentage of inhabited villages in specified population size ranges. It is seen from the table that 14 village (36percent) of the total 39 villages in number of this district fall in the population size range of 2000-4999. This is followed by the population size range 1000-1999 which constitutes 13 villages (33 percent), 4 villages each (10 Percent) fall in the population range size of 5000-9999 and 500-999. Two villages (5 Percent) fall in the 10000 and above range. One village each (3 Percent) falls in population less than 200 and 200-499 range.

Table 2: Number and percentage of inhabited villages in specified population size ranges with the related population, 2011 (Rural)

Table-3 gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. At the time of Census 2011, the urban areas of Delhi comprised 113 towns out of which, three are Statutory Towns and 110 are Census Towns. The number of Statutory Towns has remained same since 1961 Census. It is evident from the table that in 2011 Census, no new Statutory Town has been formed. Eleven new Census Towns have been created in the district. None of the Statutory Towns has been denotified and classified as Census Towns. No Census Towns of 2001 Census has been notified as Statutory Town in 2011 Census. One Census Town 2001 Census, has been wholly merged with other town which is Nangal Dewat(CT).

Table 3: New towns, de-notified, decalssified and merged town in 2011 census									
District Name: South west (08)									
(a)	New								
	(i) Statutory town								Nil
	(ii) census town	Jharoda Kalan (CT)Kair (CT)Jaffar Pur Kalan (CT)Ujwa (CT)Mitraon (CT)Khera (CT)Dindar Pur (CT)Nangli Sakrawati (CT)Moradabad Pahari (CT)Kusum Pur (CT)Malik Pur Kohi alias Rang Puri (CT)							11
(b)	Denotified								
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.								Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.								Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.								Nil
©	Declassified								Nil
(d)	Wholly merged with other town(s).	Nangal Dewat (CT)							1
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.									

Table-4 presents the sex ratio of the State and the district from 1901 to 2011. In 2001 Census, the NCT of Delhi comprised nine districts as against its uni-district status in the 1991 Census. The data for the district for 1961 to 2001 is based on recast data as per the jurisdiction of the 2011 Census. Recast data at district level for 1901 to 1951 is not available. Much difference in sex ratio of Delhi has been noticed from one Census to another. The table below presents a comparative picture of the sex ratio.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: South west(08)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	South West	797	856	768
1971	Delhi	801	825	798	South West	791	840	774
1981	Delhi	808	810	808	South West	784	828	774
1991	Delhi	827	807	830	South West	795	814	791
2001	NCT of Delhi	821	810	822	South West	784	829	778
2011	NCT of Delhi	868	852	868	South West	840	858	839
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of all the three tahsils of the district as recorded in Census-2011. The sex ratio of this district (840) has fallen below by 28 points than the State sex ratio (868). In this district, the highest sex ratio is recorded in Najafgarh tahsil (872) followed by Vasant Vihar tahsil (802) and ,the lowest one is recorded in Delhi Cantonment tahsil (783).

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5

	District: 097-South West	840	858	839

Table-6 presents the sex ratio of the C.D. Block which comprises the rural population. It is worthwhile to mention that the rural components of the district and the entire C.D. Block are identical and the names of the district and that of the C.D. Block are the same which is South-West. The sex ratio of this C.D. Block is 858. The total sex ratio of the entire district (including the urban component) is 840. The sex ratio of this C.D. Block is 10 points less than the State sex ratio (868).

Table 6: Sex ratio by CD Blocks, 2011		
Sr.No.	Name of CD block	Sex ratio

1	0006-South West	858
	Total	858

Table-7 presents the distribution of villages by the ranges of sex ratio. In this district, 9 villages constituting 23.08 percent of the total villages fall in the sex ratio range of 800-849. Twenty two villages i.e., 56.41 percent of the total villages, have recorded sex ratio in the range of 850-899. Five villages (12.82 percent) have recorded sex ratio in the range of 900-949 and, the remaining three villages fall each (2.56 percent of the total villages) in the ranges of less than 700, 750-799 and 1000-1099.

Table 7: Sex ratio of rural population by ranges, 2011

Sex ratio District (Rural):858				

Table-8 presents the sex ratio of Urban Agglomeration (UA) Part and Census Towns as recorded in Census-2011. As per Census-2011, there is only one UA with its 110 constituent units. Out of these 110 constituent units, 3 are Statutory Towns and 107 are Census Towns. The Statutory Town DMC(U) is spread over in all the nine districts and the Statutory Town NDMC is spread over in four districts. Delhi Cantonment, is the only Statutory Town which is spread over in only one district of the State and it falls in this district. As a result of this peculiar situation, the Delhi UA is appearing in parts in all the nine districts. The sex ratio of the UA Part

of the district is 839. Amongst the constituent units of the UA, the highest sex ratio is recorded in Mitraon CT (894). While the lowest sex ratio is recorded in Kapas Hera CT (478).

Table-9 presents the sex ratio of population in the age group 0-6 for tahsils in the district. In this district Vasant Vihar Tahsil has recorded the highest sex ratio 873 in the age group 0-6 whereas Najafgarh Tahsil has accounted the lowest sex ratio 832. In urban areas also, Vasant Vihar Tahsil has recorded the highest sex ratio 873 whereas. Najafgarh Tahsil has accounted for the lowest sex ratio 838. The overall sex ratio for 0-6 age group for the district is 845. The sex ratio in the age group 0-6 of the rural areas of the district is 785 which is lower by 64 points than that of the urban areas (849).

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

	Total	18901	10587	8314	785

Table-11 presents the sex ratio of the CD Block in the age group 0-6 by different ranges of population. It is seen from the table that out of 39 villages in this CD Block, 14 villages constituting 35.90 percent of the total villages fall in the sex ratio range of Less than 700 in the age group 0-6. This is followed by sex ratio range of less than 700-749 in which 20.51 percent of total villages (8 in number) fall. Four villages (10.26 percent) fall in the sex ratio range of 750-799 for the age group 0-6. Seven villages (17.95 percent) have recorded sex ratio in the range 800-849 for the same age-group. Five villages (12.82 percent) fall in the sex ratio range 850-899 and one village (2.56 percent) has sex ratio in the 1100 + range for same 0-6 age-group.

Table 11: Sex ratio of rural population in the age group 0-6 by ranges, 2011

Sex ratio District (Rural):785				

Table-12 Presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units. While the Statutory Town Delhi Cantonment falls entirely in this district, the Statutory Towns DMC(U) and New Delhi Municipal Council fall in part in this district. The Delhi Cantonment, parts of DMC(U)part of NDMC and 17 Census Towns are the constituent units of Delhi Urban Agglomeration (Part). It is seen from the table that the urban areas of the district have recorded sex ratio of 849 in the age-group 0-6 which is 64 points more than the sex ratio of rural areas of district 785 for the same age group. Amongst the constituents of the Delhi UA, the highest sex ratio 942 is recorded in Jagalpur Kalsa(CT) and the lowest is 707 Kair(CT) .

Table-13 presents the number and percentage distribution of the Scheduled Castes population in all the three tahsils of the district as recorded in Census-2011.

In this district, the proportion of Scheduled Castes population recorded in rural areas is 17.14 percent and 13.67 percent is in urban areas. In the urban areas the highest proportion (18.83 percent) of SC population is recorded in Delhi Cantonment Tahsil and the lowest (12.03 percent) is recorded in Najafgarh Tahsil. Najafgarh is the only Tahsil which constitutes the rural area and that has recorded 17.14 percent of Scheduled Caste population. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 13: Number and percentage of scheduled castes and scheduled tribes population in Sub-districts, 2011

Table-14 gives the number and percentage of Scheduled Castes population in the CD Block. As stated earlier, the rural components (including Census Towns which are otherwise villages from the point of view of revenue authorities) of the district and the entire CD Block are identical and the names of the district and the CD Block are the same which is South West. In this CD Block as well as rural areas of the district, SC population comprises 17.14 percent of the total Population of the district, which is 3.25 points higher than the proportion of SC population of the entire district. As compared to urban areas, it is 3.47 points higher than the proportion of Scheduled Castes population of the urban areas of the district. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table 14: Number and percentage of scheduled castes and scheduled tribes (rural) population in CD Blocks, 2011

	Total	143676	24619	0	17.14	0

Table-15 presents the distribution of villages in specified percentage ranges of Scheduled Castes population. It is evident that about 46.15 percent villages (18 out of 39) have Scheduled Castes population in the range of 11-20 percent. Eight villages (20.51 percent) fall in the population range of 21-30 percent. Six villages (15.38 percent) fall in the population range of 5-10 percent, Two villages (5.13 percent in each case) fall each in the

ranges of 31-40 and 41-50. Three villages (7.69 percent) have no Scheduled Caste population. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-17 presents the number and percentage of Scheduled Castes population in Urban Agglomeration (Part) and its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

It is seen from the data given in the table that, Scheduled Castes population in the urban areas constitutes 13.67 percent of the total population. Amongst the constituent units of the UA, the highest percentage of Scheduled Castes population is recorded in Kusum Pur CT (58.49) and the lowest is recorded in Kapas Hera CT (8.78 percent).

Table-18 depicts the sex ratio of Scheduled Castes population in the CD Block. The Sex ratio of Scheduled Castes population of this CD Block is 885, which is 27 points higher than the total sex ratio of the rural areas of the district (858). It is also higher by 17 points than the total sex ratio of the State (868). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-19 presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. It is seen from the table that sex ratio of the Scheduled Castes population is 870 in the urban areas of the district. This is 15 points less than the sex ratio of SC population of the rural areas of the district (885). Amongst the constituent units of the Urban Agglomeration of the district, Mitraon CT has recorded the highest sex ratio of 948 and Kapas Hera CT has recorded the lowest sex ratio of 528.

Table-20 presents the number of literates, illiterates and percentage of literates by tahsils as recorded in Census 2011. Data relating to gap in male-female literacy rate has also been presented in this table. In this district, the overall literacy rate for males and females are 93.14 and 82.5 respectively. Both male and female literacy rates are higher in urban areas than that of the rural areas. Tahsilwise, the highest male literacy rate is recorded in Najafgarh Tahsil (93.78) and the lowest is in Delhi Cantonment Tahsil (91.75). As far as female literacy rate is concerned, Vasant Vihar Tahsil has recorded the highest (82.94) and Delhi Cantonment Tahsil has recorded the lowest (82.28). Najafgarh Tahsil has recorded the literacy rate of 84.95 in rural areas. The gap in male-female literacy rate indicates that females are lagging behind males in the rural and urban areas. In urban areas of the tahsils, again Najafgarh tahsil has recorded the highest literacy rate of 88.84 and lowest is recorded in Delhi Cantonment tahsil (87.62).

Table-22 presents the distribution of villages by literacy rate ranges as recorded in Census-2011. In this district, 36 villages (92.31 percent of the total villages) fall in the literacy rate range of 81-90 and 3 villages (7.69 percent) fall in the range of 71-80. Thus 100 percent of villages (39 in number) fall in the literacy rate range between 71 and 90. The overall rural literacy rate recorded for the entire district is 84.95.

Table-23 presents the number of literates, illiterates, percentage of literates and gap in male-female literacy rate in Urban Agglomeration (Part) and its constituent units. It is seen from the table that in the urban areas of the district, there is a gap of 10.24 points between male and female literacy rates. In the case of rural areas, a gap of 20.95 points is recorded in male and female literacy rates. A comparison of the male and female literacy rates indicates that amongst the males, the highest literacy rate is recorded in Chhawala Census Town (96.52) whereas for females, it is highest in the Statutory Town NDMC (Part) (87.8). The lowest literacy rate is recorded in Kusum Pur Census Town in both the cases of males (82.68) and females (60.93).

Table-25 gives an idea about the distribution of villages by literacy rate range for Scheduled Castes Population as per Census 2011. It is seen from the table that majority of 19 villages (52.78 percent of total villages) have recorded literacy rate in the range of 81- 90. This is followed by 12 villages (33.33 percent) which have recorded literacy rate between 71 and 80. Three villages (8.33 percent) fall in the 61-70 range and the remaining 2 villages (5.56 percent) fall in the 91-99 range.

Table-26 presents the number of literates, illiterates, and percentage of literates among Scheduled Castes by sex in towns. It is seen from the table that in the case of males, the highest literacy rate is recorded in Ujwa Census Town (93.28). The lowest literacy rate for males is recorded in Kusum Pur CT (80.49). In the case of females, the highest is recorded in NDMC (Part) (78.01) and the lowest literacy rate is recorded in Kapas Hera Census Town (55.56). The gap in male-female literacy rate is recorded ranges between 12.19 and 25.22.

Table-27, 28 and 29 are relating to Scheduled Tribes population. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in all the three tahsils of the district as recorded in Census-2011.

From the table, it is seen that about 7.9 lakhs, out of the total population of 22.92 lakhs, are reported as Workers and they constitute 34.69 percent of the total population. Of this, 32.71 percent are Main Workers and 1.98 percent are Marginal Workers. In the three tahsils of the district, the highest proportion of male workers is recorded in Delhi Cantonment Tahsil (58.01 percent) and the lowest is recorded in Najafgarh Tahsil (50.79 percent). Najafgarh Tahsil has also recorded the lowest percentage of female workers (9.73 percent). The highest proportion of female workers is recorded in Vasant Vihar Tahsil (16.78 percent). The percentage of Non-workers in the three tahsils ranges between 60.67 (Vasant Vihar Tahsil) and 68.34 (Najafgarh Tahsil).

Table-31 depicts the distribution of Main Workers, Marginal Workers and Non-Workers by sex in this C.D. Block. As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are same which is South West. It is seen from the table that in this C.D. Block, 48.93 percent males and 9.35 percent females have been recorded as Workers. The proportion of Main Workers and Marginal Workers for males works out to 44.93 and 4.0 percent respectively, whereas for females these are only 6.57 and 2.79 percent respectively.

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given in the table, it is seen that the total male workforce in the urban areas of the district constitutes 53.92 percent of total male population whereas the female workforce constitutes only 12.36 percent. Amongst the males, 51.49 percent are Main Workers and 2.43 percent are Marginal Workers. In the case of females, Main and Marginal Workers constitute 11.13 and 1.22 percent respectively. Amongst the constituent units, the highest male workers have been recorded in Kapas Hera CT (74.55 percent) whereas the lowest percentage of male workers have been recorded in Kair CT (42.41 percent). In the case of females, the highest (23.78 percent) and the lowest (3.78 percent) workforce are recorded in Moradabad Pahari and Kair Census Town respectively.

Table-33 presents the distribution of workers into four broad categories viz., Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers by sex in tahsils as recorded in Census-2011. In this district, the proportion of male workers in the Other Workers (OW) and Household Industry (HHI) categories are 97.86 percent and female workers in the same categories constitute 97.50 percent. The proportion of Cultivators and Agricultural Labourers are 1.22 and 0.97 respectively. Tahsil wise, the percentage of males in OW category ranges between 94.56 (Najafgarh Tahsil) and 97.44 (Delhi Cantonment Tahsil). In the case of females, their percentage ranges between 92.37 (Najafgarh Tahsil) and 96.60 (Vasant Vihar Tahsil). In the case of HHI workers, the percentage for males ranges between 1.82 (Delhi Cantonment tahsil) and 2.44 (Najafgarh Tahsil). In case of females it ranges is between 1.99 (Vasant Vihar tahsil) and 3.86 (Najafgarh tahsil). Najafgarh Tahsil, which constitutes rural areas also, has recorded the highest percentage of male Cultivators (1.91) and female Cultivators (2.07) and also highest percentage of male Agricultural Labourers (1.09) and female Agricultural Labourers (1.69).

Table-34 presents the distribution of workers into four categories viz., Cultivators, Agricultural Labourers, HHI Workers and Other Workers.

It is seen from the table that Other Workers constitute the majority (78.65 percent). In this category males constitute 80.19 percent while females constitute 69.27 percent of the total workers. More females (15.57 percent) have been reported as engaged in cultivation than that of males (13.16 percent). The proportion of female Agricultural Labourers (AL-7.99 percent) and Household Industry (HHI) Workers (7.17 percent) are also higher than that of males (AL-4.79 percent, HHI-1.85 percent).

Table 34: Distribution of workers by sex in four categories of economic activity in CD blocks, 2011

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part) and its Constituent units. From the table, it is evident that in the case of males, only 0.50 percent workers are Cultivators and only 0.69 percent workers are Agricultural Labourers. In the case of females, these proportion work out to 0.52 percent for cultivators and 0.90 for Agricultural labourers. Household Industry workers constitute only 2.22 percent in the case of males and 2.85 percent in the case of females. In the Other Workers category, males constitute 96.59 percent and females constitute 95.73 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the

constituent units of the Urban Agglomeration (Part) reveal that majority of workers fall in the Other Workers category.

Table-38 depicts the distribution of villages not having certain amenities arranged by distance ranges from the places where these facilities are available as recorded in 2011. It is seen that residents of 1 village (out of 39) have to travel a distance of 5-10 Kms. for Primary Schools. Residents of 18 villages have to cover up to 5 Kms., and residents of 1 village have to cover a distance of 5-10 Kms. for Middle Schools. For College education, residents of 25 villages have to travel 5-10 Kms. and residents of 8 villages have to travel beyond 10 Kms. For the residents of 6 villages, college facility is available within 5 Kms. Hospital facility is available to 3 villages within 5 Kms. Residents of 28 villages have to travel a distance of 5-10 Kms. while residents of 7 villages have to travel beyond 10 Kms. to avail this facility. PHC facility is available to residents of 13 villages (within 5 Kms.), 16 villages (within a distance 5-10 Kms.) and 9 villages (more than 10 Kms.). Post office facility is not available in 19 villages. The same is available to 18 villages within 5 Kms. and the residents of 1 village have to cover a distance of 5-10 Kms. to avail this facility. All the 39 villages have Telephone and Bus facility. Commercial Bank facility is not available in 33 villages. The facility is available to residents of 17 villages within 5 Kms. and, also available to resident of 16 villages within a distance of 5-10 Kms. Cooperative Bank facility is not available in 37 villages. This facility is available to residents of 4 villages within 5 Kms., residents of 18 villages within a distance of 5-10 Kms. and residents of 15 villages beyond 10 Kms. Agricultural Credit Society facility is not available in 39 villages. The facility is available to 2 villages within a distance of 5 Kms., same is available to 23 villages within a distance 5-10 Kms. And also available to 14 villages beyond 10 Kms.

Table-40 depicts the distribution of villages according to population range and availability of amenities. The data given in the table reveals that out of 39 villages, 14 villages fall in the population range of 2000-4999, 13 in 1000-1999, 4 each falls in population range of 500-999 and 5000-9999. 2 villages each fall in the range of 1-499 and 10000+ population range. Amenities like Drinking Water, Telephone, transport communications, power supply and approach by pucca road are available in all the 39 villages in their respective ranges. In the population range of 1000-1999 the Education facility is available to 12 villages (92.31 percent) out of 13 inhabited villages. Rest of the ranges 100 percent villages have Education facility in their respective ranges. i.e. 38 villages (97.44 percent) of 39 in the district have education facility. Medical facility is available in 19 villages (48.72 percent) in the district. In the population range of 1-499 and 10000+ there are two villages in each range and none of the villages has Medical facility. In the range of 500-999 out of 4 villages only 2 villages (50 percent) have medical facility. In the range of 1000-1999 there are 13 villages and out of 13 only 3 villages (23.08 percent) have Medical facility. In the range of 2000-4999, 11 villages (78.57 percent) out of 14 have Medical facility. And in the range of 5000-9999 out of 4 villages 3 villages (75 percent) have medical facility. Post office facility is not available to any village in the range of 1-499 and 500-999. Only 5 (38.46 percent) villages out of 13 have facility in the range of 1000-1999. 11 villages (78.57 percent) out of 14 in the range of 2000-4999 are have Post Office facility. This facility is available to 3 (75 percent) out of 4 village and 1 village (50 percent) out of 2 villages in the range of 5000-9999 and 10000+ respectively. Bank facility is available in only 6 villages (15.38 percent) in the District. Three villages (21.43 percent) out of 14 villages, 2 villages (50 percent) out of 4 villages and 1 village (50 percent) out of 2 villages in the range of 2000-4999, 5000-9999 and 10000 respectively have Bank facility. Agricultural Credit Society facility is not available in any of the villages in any range.

	Total	39	15017.10	68.59	76.28
Note:- Culativable area= irrigated area + unirrigated area					

Table 42 reflects that highest no of Primary schools are reported in Kair (CT) which is 12.27 per 10,000 population among all 18 towns. Similarly highest no of Middle school are Kair (CT) which is 7.36 per 10,000 population among all 18 towns. Highest no of Secondary/Matriculation school, are reported in Kair (CT), which is 4.91 per 10,000 population among all 18 towns. Highest number of senior secondary School and Colleges both are reported in Jathar Pur Kalam(CT) which are 3.04 and 1.52 respectively per 10,000 population among all 18 towns. Where as lowest no of primary school and middle school are reported in Moradabad pahari (CT) and Kapas Hera(CT)respectively which are 0.47 and 0.27 per 10,000 population. Lowest no.of Secondary/Matriculation school reported in Nangli Sakrawati(CT) and Kapan Hera (CT) are shared with the 0.27 per 10,000 populations. Among all 18 towns Moradabad Pahari(CT)and Malik Mur Kohi alian Range

Puri(CT) have neither middle school nor Secondary/Matriculation school. Lowest no of senior Secondary school is reported in Kapas Hera(CT) with 0.27 per 10,000 population. Among the 18 towns, 4 towns have no senior Secondary school Delhi Cantonment (CB) has reported lowest no colleges which is 0.09 per 10,000 population. Out of all 18 towns have no colleges.

DISTRICT: SOUTH

Table-1 presents the decadal change in population of all the three tahsils of the south district during 2001-2011. In this district, the population has increased by 20.5 Percent in 2001-2011. In rural areas of the district, the population growth is negative and recorded -92.4 percent whereas in urban areas, it has grown by 29.1 percent. Amongst the tahsils, the highest growth of 38.2 percent is recorded in Kalkaji tahsil followed by Hauz Khas tahsil which has recorded a growth of 19.2 percent. The lowest growth of 4.5 percent is recorded in Defence Colony tahsil. The percentage distribution of urban population reveals that more than 99.0 percent population resides in the urban areas.

Table-3 Gives an idea about the new towns, towns denotified, declassified and merged with other towns in 2011 Census. At the time of Census 2011, the urban areas of Delhi has comprised 113 towns out of which, three are Statutory Towns and 110 are Census Towns. The number of Statutory Towns has remained the same since 1961 Census. It is evident from the table that in 2011 Census, 12 villages of this district have been treated as new Census Towns. None of the towns has been denotified after 2001 Census.

Table 3: New towns, de-notified, decalssified and merged town in 2011 census								
District Name: South (09)								
(a)	New							
	(i) Statutory town							Nil
	(ii) census town	Aya Nagar (CT) Fateh Pur Beri (CT) Dera Mandi (CT) Chandan Hola (CT) Chattar Pur (CT) Maidan Garhi (CT) Raj Pur Khurd (CT) Neb Sarai (CT) Saidabad (CT) Kotla Mahigiran (CT) Aali (CT) Jait Pur (CT)						12
(b)	Denotified							
	(i) Statutory towns of 2001 census denotified and also did not satisfy the criteria to be treated as census towns.							Nil
	(ii) Statutory towns of 2001 census denotified but identified as census towns based on demographic and economic criteria.							Nil
	(iii) Census towns of 2001 census are notified as statutory town in 2011 census.							Nil
©	Declassified							Nil
(d)	Wholly merged with other town(s).							Nil
*Declassified means the census towns of 2001 census which failed to satisfy the demographic and economic criteria.								

Table-4 presents the sex ratio of the State and district from 1901 to 2011. In 2001 Census, the NCT of Delhi comprised nine districts as against its uni-district status in the 1991 Census. The data for the district for 1961 to 1991 is based on recast data as per the jurisdiction of the 2001 Census. Recast data at district level for 1901 to 1951 is not available. Much difference in sex ratio of Delhi has been noticed from one Census to another. The table below presents a comparative picture of the sex ratio.

Table 4 : Sex Ratio of State and District, 1901-2011								
District: South (09)								
Census Year	State	Total	Rural	Urban	District	Total	Rural	Urban
1	2	3	4	5	6	7	8	9
1901	Delhi	862	916	817	Delhi	862	916	817
1911	Delhi	793	869	740	Delhi	793	869	740
1921	Delhi	733	845	672	Delhi	733	845	672
1931	Delhi	722	860	670	Delhi	722	860	670
1941	Delhi	715	846	677	Delhi	715	846	677
1951	Delhi	768	837	754	Delhi	768	837	754
1961	Delhi	785	847	777	South	782	781	782
1971	Delhi	801	825	798	South	796	759	799
1981	Delhi	808	810	808	South	794	747	796
1991	Delhi	827	807	830	South	807	780	808
2001	NCT of Delhi	821	810	822	South	799	780	801
2011	NCT of Delhi	868	852	868	South	862	788	862
Note: Till 1996, Delhi remained a uni-district and it was bifurcated into 9 districts and the districts came into being from 1-1-1997. Data in respect of 1901 to 1951 given in column 7 to 9 related to Delhi uni-district. Data in respect of 1961 to 2001 has been presented for the district based on recast data as per jurisdictions of 2011 census.								

Table-5 depicts the sex ratio of tahsils as recorded in Census-2011. In this district, the highest sex ratio (877) in urban areas has been recorded in Defence Colony Tahsil followed by Hauz Khas tahsil (871). The lowest sex ratio of 839 has been recorded in Kalkaji Tahsil. The urban areas of the district has recorded higher sex ratio (862) than the sex ratio of rural areas (788). Only the Hauz Khas Tahsil comprises the rural area and that rural area of the Hauz Khas Tahsil as well as of the District has recorded sex ratio of 788. Overall, the sex ratio of the entire district (862) has fallen below the State sex ratio (868).

Table 5: Sex ratio by Sub-district, 2011				
Sr.No.	Name of Sub-district	Sex ratio		
		Total	Rural	Urban
1	2	3	4	5
1	00454-Hauz Khas	870	788	871

3	00456-Kalkaji	839	0	839
	District: 098-South	862	788	862

Table-6 presents the sex ratio of the C.D. Block. It is worthwhile to mention that the rural components (including Census Tows which are otherwise villages from the revenue point of view) of the district and the entire C.D. Block are identical and the name of the district and the C.D. Block are the same which is South. It is seen from the table that sex ratio of this C.D. Block is 788. The total sex ratio of the district (including the urban component) is 862. The sex ratio of this Block is 80 points less than the State sex ratio (868).

Table 6: Sex ratio by CD Blocks, 2011		
Sr. No.	Name of CD block	Sex ratio
1	2	3
1	0007-South	788
	Total	788

Table-7 presents the distribution of villages by the ranges of sex ratio. Two villages (66.67 percent) out of the three villages in the district fall in the sex ratio range 800-849. This is followed by the sex ratio range 750-799 in which one village (33.33 percent) falls. None of the villages fall in the sex ratio range less than 700, 700-749, 850-899 and above. The rural sex ratio of the district is 788.

Table 7: Sex ratio of rural population by ranges, 2011

Sex ratio District (Rural):788				

Table-8 presents the sex ratio of Urban Agglomeration (UA) and towns of the district. The Statutory Towns DMC (U) and NDMC are spread over in nine and four districts respectively. As a result of this peculiar situation, the Delhi UA is appearing in parts in all the nine districts. Among the constituents of the UA, the highest sex ratio (926) is recorded in Kotla Mahigiran and the lowest (819) is recorded in Jona Pur CT. The UA Part has recorded a sex ratio of 862.

	Sex ratio (Urban) district:		862

Table-9 presents the sex ratio of population in the age group 0-6 for all the three tahsils of the district. In his district, Defence Colony Tahsil has recorded the sex ratio of 898 in the age group 0-6, which is highest among all the three tahsils. Hauz Khas tahsil has recorded the lowest sex ratio (881). Hauz Khas is the only one Tahsil which constitutes rural areas and has recorded the sex ratio of 928 in the age group of 0-6. The total sex ratio of the district is 885. In the Urban areas of the District the sex ratio is the same as of the total district i.e. 885. Rural areas of the district has recorded the higher sex ratio of 928 as compared to the urban areas of the district (885).

Table 9: Sex ratio of population in the age group 0-6 for Sub-district, 2011

Table-10 depicts the sex ratio of population in the age group 0-6 for the C.D. Block. The sex ratio of population in the 0-6 age group of the C.D. Block is higher than the sex ratio of the State, which are 928 and 814 respectively. The sex ratio of this age group is 114 points more than the State rural sex ratio (814).

Table 10: Sex ratio of population in the age group 0-6 for CD Blocks, 2011

Sex ratio District (Rural):928				

Table-12 presents the sex ratio of the population in the age group 0-6 of Urban Agglomeration (Part) and its constituent units. The Statutory Towns DMC (U) and NDMC fall in parts in this district. The DMC (U) and the NDMC, which are falling in parts in the district, and 23 Census Towns which also fall in the district are the constituent units of Delhi Urban Agglomeration (Part). It is seen from the table that the urban areas of the

district have recorded sex ratio of 885 in the age-group 0-6 which is 43 points less than the sex ratio of the rural areas of the district (928) for the same age group. Amongst the constituents of the Urban Agglomeration, the highest sex ratio (970) is recorded in Neb Sarai Census Town and the lowest (731) is recorded in Fateh Pur Beri CT.

Table-13 presents the number and percentage distribution of Scheduled Castes population in all the three tahsils of the district as recorded in Census-2011. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. In this district, Scheduled Castes population constitutes 15.48 percent of the total population. The share of the rural and urban areas has very little variation. (16.15 and 15.48 percent respectively). Tahsil wise, the highest percentage of Scheduled Castes population (17.85) is recorded in Hauz Khas Tahsil, whereas it is lowest (10.74) in Defence Colony Tahsil. Defence colony and Kalkaji Tehsils are totally urban and Hauz Khas is the only one Tahsil which comprise rural areas also. The rural areas of the Hauz Khas Tahsil constitute 16.15 Percent of Schedule Caste Population. In the case of urban areas, Hauz Khas Tahsil again has recorded the highest percentage (17.87) of Scheduled Castes population among the three tahsils. Here again, Defence Colony Tahsil has accounted for the lowest percentage (10.74) of SC population among all the three tahsils.

Table 13: Number and percentage of scheduled castes and scheduled tribes population in Sub-districts, 2011

Table-14 below gives the number and percentage of Scheduled Castes population in the C.D. Block. The rural components of the district and the entire C.D. Block are identical and the name of the district and the C.D. Block are the same. Scheduled Castes population of the C.D. Block comprises 16.15 percent of the total population of the district. This proportion is 0.67 point more than the proportion of Scheduled Castes population of the entire district i. e. 15.48. In the case of urban areas of the district also, it is more than the proportion of Scheduled Castes population by 0.67 point. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-17 presents the number and percentage of Scheduled Castes in Urban Agglomeration (Part), its constituents units and other Census Towns. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented. As already stated, Statutory Town DMC (U) is falling in parts in all the nine districts of the State. Similarly, the Statutory Town NDMC is also falling in parts in four districts of the State, which includes the South district. It is seen from the table that DMC (U) and NDMC, falling in parts in this district, there are 23 Census Towns, all of which are the constituents of the Delhi Urban Agglomeration. An analysis of the data given in table would reveal that Scheduled Castes population in the urban areas of the district constitutes 15.48 percent of the total population. The proportion of Scheduled Castes population in the rural areas of the district is 16.15 percent. Amongst the constituent units of the Urban Agglomeration, the highest proportion (42.37 percent) of Scheduled Castes population is recorded in Tigri Census Town and the lowest proportion (2.37 percent) is recorded in Chandan Hola Census Town.

Table-18 depicts the sex ratio of Scheduled Castes population in the C.D. Block. The Sex ratio of Scheduled Castes population of this C.D. Block is 854, which is 66 points higher than the sex ratio of the total rural population (788) of the district. The sex ratio of the Scheduled Castes of this C.D. Block is lesser by 14 points than the sex ratio of the State (868). In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-19 presents the sex ratio amongst Scheduled Castes in Urban Agglomeration (Part) and its constituent units. From the table, it is seen that sex ratio of the urban SC population is 895 in the districts. This is 41 points more than the sex ratio of rural SC population (854). Amongst the UA constituents, the highest sex ratio 977 is recorded in Neb Sarai Census Town and lowest sex ratio 769 is recorded in Chandan Hola Census Town. In Delhi, no Scheduled Tribe has been notified. As such, data for the same is not presented.

Table-20 presents the number and percentage of literates, illiterates by tahsils and the gap in male-female literacy rate as recorded in Census 2011. It is seen from the table that 91.73 percent males and 80.55 percent females are literates in this District. The literacy rate for both males and females are higher in urban areas than rural areas. Tahsilwise, male literacy rate is the highest (92.27) in Hauz Khas Tahsil and the lowest (90.66) is in Kalkaji Tahsil. In the case of females, highest literacy rate (85.42) is recorded in Defence Colony Tahsil and the lowest (76.57) is in Kalkaji Tahsil. Hauz Khas is the only Tahsil Which constitute the rural areas in the district. The Rural areas of this Tahsil as well as of the district has recorded the literacy rate of 78.26. The gap in male-female literacy rate is wider in rural areas of Hauz Khas Tahsil which is recorded 16.79 Points. The gap (6.74 points) is narrow in Defence Colony Tahsil. A similar pattern is noticed in the male-female gap in literacy rate in the urban areas. The highest gap (14.09 percent) in male female literacy rate is recorded in Kalkaji Tahsil.

Table-23 presents the number of literates, illiterates, percentage of literates and gap in male and female literacy rates in Urban Agglomeration (Part) and its constituent units. From the in this table it is seen that there are Two Agglomeration (Part) and 23 Census Towns. The table shows that in the urban areas of the district, there is a gap of 11.16 points in the male and female literacy rates. In the case of rural areas, a gap of 16.79 points is recorded in male and female literacy rates. A comparison of the male and female literacy rates indicates that amongst males, the highest literacy rate for males (95.89) and for females(90.74) are recorded in the Census Town Kotla Mahigiram. The lowest literacy rate is recorded in Bhati Census Town in both the cases of males (75.16) and females (53.66).

Table-25 gives an idea about the distribution of villages by literacy rate ranges for Scheduled Castes population of the district. It is seen from the table that there are only three villages in the District. Out of the 3 villages in the C.D. Block, 2 villages (66.67 percent) fall in the literacy rate range of 61-70 in respect of Scheduled Castes population. One village (33.33 percent) falls in the 71-80 range. None of the villages fall in literacy rate range of 0, 1-10 to 51-60 and 81-90 to 100.

Table-27, 28 are relating to scheduled tribes population. In Delhi, no scheduled Tribes has been notified. As such, these tables are not presented.

Table-30 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in tahsils of the district as recorded in Census-2011. In this district 33.84 percent are Workers, of which 31.81 percent are Main Workers and only 2.02 percent are Marginal Workers. In this district 52.85 percent males and 11.77 percent females are reported as workers. Tahsil wise, the percentage of male workforce ranges between 51.88 (Kalka ji) and 54.53 (Defence Colony Tahsil) and the percentage of female workforce ranges between 8.98 (Kalkaji Tahsil) and 15.75 (Defence Colony Tahsil).

Table-31 depicts the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in the C.D. Block.

As stated earlier, the rural components of the district and the entire C.D. Block are identical and the names of the district and the C.D. Block are the same. It is seen from the table below that in this C.D. Block 52.54 percent males and 11.97 percent females have been recorded as Workers. The roportion of Main Workers and Marginal Workers for males are 49.13 and 3.42 percent respectively, whereas for females these are only 10.35 and 1.62 percent respectively.

Table 31: Number and percentage of main workers, marginal workers and non-workers by Sex in CD Blocks, 2011											
Sr. No.	Name of CD Block	Persons/ Males/ Females	Total population	Main workers		Marginal workers		Total workers (main and marginal workers)		Non workers

Table-32 presents the number and percentage of Main Workers, Marginal Workers and Non-Workers by sex in Urban Agglomeration (Part) and its constituent units. From the data given in the table, it is seen that the total male workforce in the urban areas of the district constitutes 52.86 percent of total male population whereas the female workforce constitutes only 11.77 percent. Amongst the males, 50.13 percent are Main Workers and 2.73 percent are Marginal Workers. In the case of females, Main and Marginal Workers constitute 10.56 and 1.20 percent respectively. Amongst the constituent units of the Urban Agglomeration, the highest percentage of male workers (56.61) has been recorded in Kotla Mahigiran Census Town whereas the lowest percentage of male workers (44.74) has been recorded in Dera Mandi Census Town. In the case of females, the highest (25.18 percent) workforce is recorded in Kotla Mahigiran Census Town and the lowest (4.22 percent) workforce is recorded in Jat Pur Census Town.

Table-33 presents the distribution of Workers into four broad categories viz., Cultivators, Agricultural Labourers, Household Industry Workers and Other Workers, by sex in tahsils as recorded in Census-2011. In this district, 99.07 percent males and 98.87 percent females have been recorded as workers engaged in non-agricultural pursuits. Male and female Cultivators and Agricultural Labourers constitute less than one percent in each case in the district. A comparison of the data amongst the tahsils would indicate that the proportion of male workers in the Other Workers (OW) category ranges between 95.96 percent (Defence Colony Tahsil) and 96.91 percent (Kalkaji Tahsil) and female workers ranges between 95.46 percent (Kalkaji Tahsil) and 96.96 percent (Defence Colony Tahsil). The proportion of male HHI workers ranges between 2.15 percent (Kalkaji Tahsil) and 3.23 percent (Defence Colony Tahsils) and female HHI workers ranges between 2.23 percent (Defence Colony Tahsil) and 3.32 percent (Kalkaji Tahsil).

Table 33: Distribution of workers by sex in four categories of economic activity in Sub-District, 2011

Table-34 presents the distribution of Workers by sex in four categories of workers in this C.D. Block. It is seen from the table that Other Workers constitute the majority (89.80 percent). Males in this category constitute 90.43 percent and females constitute 86.31 percent in the same category. Percentage of females (3.58) engaged in cultivation is more than that of males (1.76). The proportion of female Agricultural Labourers (AL-4.82 percent) and Household Industry (HHI) Workers (5.29 percent) are also higher than that of males (AL-4.69 percent, HHI-3.13 percent).

Table-35 depicts the data pertaining to distribution of workers by sex into four categories of workers in Urban Agglomeration (Part), its constituent units and 23 Census Towns of the district as recorded in Census 2011. From the table it is evident that in the case of males only 0.90 percent workers are engaged in agricultural pursuit. In the case of females, this proportion works out to 1.10 percent. Household Industry workers constitute only 2.69 percent in the case of males and 2.80 percent in the case of females. In the OW category, males constitute 96.40 percent and females constitute 96.10 percent of the total workforce. A look at the pattern of distribution of workforce into four categories in the case of the constituent units of the UA (Part) reveals that the majority of workers fall in the OW category.

NOTE: Table 36 to 45 represent brief analysis of the village Directory and Town Directory. The non-Census data presented in the table have been collected from different departments/agencies and revenue authorities.

Table-36 depicts the distribution of villages according to availability of different amenities. It is seen from the table below that there are three villages in this District. Amenities like Education, Drinking Water, Telephone, Transport Communication, Approach by pucca road and Power supply are available in all the three villages (100 Percent villages). Medical facility is available to only 2 villages (66.67 percent). While facilities like Post Office, Banks and Agricultural credit Societies are not available in any of the three villages.

Table 36: Distribution of villages according to availability of different amenities, 2011												
Sr. No.	Name of CD Block	Number of inhabited villages	Type of amenity available

\$ Transport communication includes bus service, rail facility and navigable waterways.												
@ Bank includes Commercial Bank and Cooperative Bank.												
** Telephone includes Telephone, PCO and Mobile.												

Table-37 gives an idea about the percentage of rural population served by different amenities. It is encouraging to note that basic facilities like Improved drinking water, Education, Telephone, transport communications, approach by pucca road and power supply are available to cent percent of the rural population. Medical facility is available only to 74.66 percent of the rural population. Facilities like Post Office, Banks and Agricultural Credit Societies are not available to the population of these villages.

Table-38 depicts the distribution of villages not having certain amenities, arranged by distance ranges from the places where these facilities are available as recorded in 2011. It is seen from the table that out of the 3 villages in the C.D. Block, residents of 1 village have to travel a distance of less than 5 Kms. for Primary Schools, Middle School and Degree College. Residents of 1 village have to travel a distance of 5-10 Kms. to avail the facility of Degree College Education. Major medical facilities like Hospital and Primary Health Centres (PHC) are not available to residents of any of the villages. These facilities are available to the residents of all the three villages within 5 Kms. Post office facility is not available to any of the three villages. Residents of 2 villages have to cover a distance less than 5 Kms. and residents of one village have to cover a distance 5-10 Kms. to avail this facility. Telephone and Bus facility are available to all the 3 villages in the C.D. Block. Commercial Bank facility is not available to any of the three villages. Residents of these three villages have to cover a distance of less than 5 Kms. to avail this facility. Cooperative bank and agricultural credit society facilities are also not available to any of the three villages. For availing Co-operative bank facility, residents of all the 3 villages have to cover a distance of less than 5 Kms. And, residents of all the 3 villages have to cover distance of 5-10 Kms to avail agricultural credit society facility.

Telephone includes Telephone, PCO and mobiles					
Bus includes private and public					

Table-39 gives the distribution of villages according to the distance from the nearest Statutory Town and availability of different amenities in the villages of this C.D. Block. It is seen from the table that all the 3 villages in this C.D. Block fall in the distance range of 5-15 Kms. from the nearest Statutory Town. Facilities of Education, Telephone, Transport communications and approach by pucca road are available to all the 3 villages (100 percent of villages). Medical facility is available to only 2 villages (66.67 percent). Facilities of Post Office, Banks and Agricultural Credit Societies are not available to any of the three villages.

Table 39: Distribution of villages according to the distance from the nearest statutory town and availability of different amenities, 2011										
Distance Range from the nearest Statutory Town (In Kilometres)	Number\ Percentage	Number of Inhabited Villages in Each Range	Type of amenity available

** Telephone includes Telephone, PCO and Mobile.										

Table-40 depicts the distribution of villages according to population range and availability of amenities. In this table, villages have been classified into six population ranges. The data reveals that out of the 3 villages, 2 villages fall in the population range of 2000-4999 and 1 village falls in the population range of 5000-9999. In the population range 2000-4999, educational facility, drinking water, telephone communications, approach by pucca road and power supply are available in 2 villages (100 percent) and medical facility is available in 1 village (50 percent). In this population range no villages have the facilities post office, banks, agricultural credit societies. In the population range 5000-9999, educational facility, medical, drinking water, telephone

communications ,approach by pucca road and power supply are available in these villages (100 percent) and post office ,banks, agricultural credit societies facilities are not available in these villages.

Table 40: Distribution of villages according to population range and amenities available, 2011												
Population range	Number\ Percentage	Number of inhabited villages in each range	Type of amenity available									
			Education*	Medical ^	Drinking water	Post office #	Telephone **	Transport communications \$	Banks @	Agricultural credit societies	Approach by pucca road	Power supply

10(vii) Major social and cultural events, natural and administrative developments and significant Activities during the decade.

Delhi, being a capital of India, is the venue for a number of social and cultural events at national as well as international level. Many important administrative developments take place day by day in Delhi. Though it is not possible to list out all the events and the names of all foreign dignitaries who have visited Delhi during the decade 2001-2011, an attempt has been made to list out some of the important social and cultural events, natural and administrative developments and significant activities during the period 1st March, 2001 to February 28, 2011:

2001

- The 2001 Census of India was the 14th in a series of [Censuses](#) held in [India](#) every decade since [1871](#). The population of India was counted as 1,028,737,436, consisting of 532,223,090 males and 496,514,346 females. Total population increased by 182,310,397, 21.5% more than the 846,427,039 people counted during the 1991 census.
- 13 May 2001- reports began to circulate in the Indian capital New Delhi of a strange monkey-like creature that was appearing at night and attacking people. On 13 May 2001, 15 people suffered injuries ranging from bruises to bites and scratches.
- 13 December 2001- five terrorists infiltrated the Parliament House in a car with Home Ministry and Parliament labels. The total number of deaths was 14 and at least 22 people were injured in the attack.

2002

- 23 October 2002- United Nations Climate Change Conference took place from October 23 to November 1, 2002, in [New Delhi, India](#). The conference included the 8th Conference of the Parties (COP8) to the [United Nations Framework Convention on Climate Change](#) (UNFCCC).
- 24 December 2002 – Prime Minister Vajpayee opens the first stretch of Delhi's new [metro](#) system.
- 3 – 5 December 2002 – [Russian](#) President [Vladimir Putin](#) visits India, holding talks with Prime Minister Vajpayee and other senior ministers.
- 15 November 2002– A court in New Delhi finds that there is sufficient evidence to prosecute the UK based businessmen and brothers Srichand, Gopichand, and Prakash Hinduja for cheating, conspiracy, and abetting corruption in the 1986 arms procurement scandal between India and the Swedish arms manufacturer [Bofors](#).
- 12 August 2002– [Bhairon Singh Shekhawat](#) is elected vice president.
- 25 July 2002 - Avul Pakir Jainulabdeen "A. P. J." Abdul Kalam served as the 11th President of India, succeeding K. R. Narayanan. He won the 2002 presidential election with an electoral vote of 922,884, surpassing the 107,366 votes won by Lakshmi Sahgal. His term lasted from 25 July 2002 to 25 July 2007.

2003

- 4 December 2003- The Delhi state assembly elections 2003 were elections for the [Legislative Assembly of Delhi](#) held on 1 December 2003 with the results declared on 4 December. The [Indian National Congress](#) retained control of the Legislative Assembly. Of the 70 elected legislators 63 were men and 7 women.

2004

- The [Indian general election, 2004](#) in [Delhi](#), occurred for 7 seats in the state.
- 22 May 2004- Sh. Manmohan Singh took the oath as the Prime Minister of India on 22 May 2004.

2005

- 29 October 2005- Delhi bombings occurred on 29 October 2005 in [Delhi](#), India, killing 62 people and injuring at least 210 others in three explosions. The bombings came only two days before the important festival of [Diwali](#), which is celebrated by [Hindus](#), [Sikhs](#), and [Jains](#). The bombs were triggered in two markets in central and south Delhi and in a bus in the [Govindpuri](#) area in the south of the city. Indian investigators believe the [Kashmir](#) separatist/ Islamic terrorist group [Lashkar-e-Taiba](#) was behind the attacks.

2006

- The 2006- Delhi sealing drive was a campaign by the [Municipal Corporation of Delhi](#) (MCD) to close (and thus "[seal](#)" the locks of) a number of illegal commercial establishments in Delhi, India which are running in [residential](#) areas without authorization. The drive witnessed considerable opposition from trading bodies in the city which led to the death of four people in September 2006. It ran until early 2007
- 26 January 2006 – [Saudi](#) monarch [King Abdullah](#) was chief guest at [Republic Day parade](#) in [New Delhi](#).
- 2–5 March 2006– [President of the United States](#), [George W. Bush](#) visited India.

2007

- 14 February 2007- The Delhi summit on security took place on February 14, 2007, with the [foreign ministers](#) of [China](#), [India](#), and [Russia](#) meeting in [Hyderabad House](#), [Delhi](#), India to discuss [terrorism](#), [drug trafficking](#), [reform of the United Nations](#), and the security situations in [Afghanistan](#), [Iran](#), [Iraq](#), and [North Korea](#).
- 25 July 2007- Smt. Pratibha Devisingh Patil is an Indian politician hold the office as the 12th President of India. She is first woman president. A member of the Indian National Congress.
- 15th august 2007- India marks 60th anniversary.

2008

- January 2008- Tata Motors launched Tata Nano, the least expensive production car in the world at about ₹120,000 (US\$3,000). The city car was unveiled during the Auto Expo 2008 exhibition in Pragati Maidan, New Delhi.
- 13 September 2008- Delhi bombings were a series of five synchronized [bomb blasts](#) that took place within a span of few minutes on Saturday, 13 September 2008 at various locations in [Delhi](#), India. The first bomb exploded at 18:07 IST, and four other blasts followed in succession, with at least 30 people killed and over 100 injured.
- 27 September 2008- Delhi blast in [India](#)'s second largest metropolis left three people dead and twenty-three more injured, on an infamous Saturday. The explosion occurred at 14:15 IST, in [Mehrauli](#)'s Electronic market called Sarai. Initially, there were reports of two persons,

including a thirteen-year-old boy, named Santosh being killed in the attack. However, the next day the death toll rose to three. About 23 others were injured.

2009

- The [Indian general election, 2009](#) in [Delhi](#), occurred for 7 seats in the state.
- 2 July 2009- Chapter XVI, Section 377 of the Indian Penal Code was declared unconstitutional with respect to sex between consenting adults by the High Court of Delhi on 2 July 2009.

2010

- 3 to 14 October 2010- The 2010 [Commonwealth Games](#), officially known as the XIX Commonwealth Games, were held in [Delhi, India](#), from 3 to 14 October 2010. A total of 6,081 athletes from 71 [Commonwealth nations and dependencies](#) competed in 21 sports and 272 events, making it the largest [Commonwealth Games](#) to date. It was also the largest international [multi-sport event](#) to be staged in Delhi and India, eclipsing the [Asian Games](#) in [1951](#) and [1982](#).
- 6-9 November 2010- US President Obama visit to India.

10(viii) Brief description of places of religious, historical or archaeological importance in villages and places of tourist interest in the towns of the districts.

Delhi is one of the ancient and historic cities of India. Delhi is also the capital of India. It has seen a number of rulers, dynasties and emperors. As such, there are a number of places of religious, historical and archaeological/tourist importance. The district wise description of the places of religious, historical and archaeological/tourist importance is given below district-wise:

District : North

Choburji Mosque

This is a protected monument. The mosque was built during the period of Firoz Shah Tughluq. Extensive additions and modifications were made to this mosque during the reign of the last Mughal Emperors.

Roshanara Gardens

This spectacular monument is located in the worldrenowned Roshanara Gardens near Old Sabzi Mandi. This two-storeyed beautiful monument built by Roshanara Begum, daughter of Mughal Emperor Shahjahan in 1650, adores the sprawling Roshanara Gardens. Roshanara Begum was buried in this garden. The monument has lately shown signs of deterioration.

St. Stephen Church

Located near Fatehpuri mosque in Chandni Chowk, this church was built in 1867. It has a high Bell Tower and a Central Hall. This beautiful church was awarded the DDA Urban Heritage Award in 1994.

Baoli

This well-like deep structure, situated on Bara Hindu Rao Marg off Rajpur Road in the Civil Lines area, was built in the early part of the 14th century during the reign of Firoz Shah Tughluq. It has

chambers all around which were probably used by the members of the Royal family to have respite from the summer heat of Delhi. The actual depth of the Baoli cannot be measured now due to heavy vegetation inside. A very long tunnel also exists here. However, the access to this tunnel and to the Baoli has almost been denied due to excessive vegetation and lack of maintenance.

Ashoka Pillar

This historic monument is presently located on Rani Jhansi Road, south of Bara Hindu Rao Hospital. This magnificent 33 ft. high pillar, built in the third century BC, was brought to its present site from Meerut by Firoz Shah Tughluq in 1356. This pillar had broken into pieces in an explosion during the reign of Emperor Farruqh Shiyar in the 1838s. It was, however, restored to its original shape by Hindu Rao, the Asiatic Society and PWD Engineers of Delhi.

Mutiny Memorial

This huge Tower, erected in 1863 in memory of the Indian and British soldiers who died between May 20 and September 20, 1857, is located on Rani Jhansi Road, south of Bara Hindu Rao Hospital. This rare piece of Architectural beauty has ornamental facades.

Nicholson Cemetery

This is one of the oldest British Cemeteries in use since 1857. The first to be buried here was Nicholson himself. This graveyard, located at the eastern end of Boulevard Road, is in a state of serious deterioration. However, the dead bodies are regularly brought here for burial. Neglect of the cemetery, growth of shrubs and monkey menace have contributed to the deterioration of the cemetery.

Kashmere Gate

This is one of the four gates of the city of Shahjahanabad which was built by Emperor Shahjahan. The road leading from this gate was probably used to reach the Kashmir region. This gate has two arched openings and apartments on either side. A bastion was added to this gate by the British who attacked and entered Delhi from this gate during 1857.

St. James Church

This is a very huge and impressive church in Kashmere Gate, south of Inter-State Bus Terminal. The church was built in 1826 by Colonel James Skinner, a British Army Officer. Its historical importance can be judged from the fact that it was the first church to be built by the British in Delhi. The building is a rare piece of architecture and is a mixture of colonial classical architecture and Greek and Mughal styles.

Nigam Bodh Ghat

This famous cremation ground is located on the banks of river Yamuna near the Inter-State Bus Terminal, Kashmere Gate. This site is of great antiquity and religious significance. It is believed that Lord Brahma regained his Vedic knowledge at this particular place during the Dwapar Yug. The tradition here dates back to the period around 1000 B.C. It is said that Yudhishtra performed 'Yagna' here. The present structure came up in 1737.

Neeli Chatri Temple

This highly venerated temple, believed to have been built during the period of the Pandavas, is located near Old Bridge Road in Yamuna Bazar. The historical importance of this temple can be gauged from the fact that Mughal Emperor Humayun built a pavilion here to have a view of river Yamuna. It is said that this structure was converted into a temple by the Marathas who invaded Delhi later on. They also added two inscriptions which were brought specially from Kashmir in 1618 and 1620 respectively. The temple derives its name from the blue colour of its roof.

Salim Garh Fort

This fort, located on the northern side of Red Fort, was built by Islam Shah alias Salim Shah in 1546. Salim Shah could complete construction of only the walls of the fort during his life time and the later structure, including the famous jail inside the fort, came up during the reign of Aurangzeb. Several Mughal Emperors and their families stayed temporarily in Salim Garh fort when the Shahjahanabad city was under construction.

Salim Garh Jail

This world famous prison is located inside the Salim Garh fort. This large rectangular building has rooms on both side and a central passage. The historical and architectural value of this jail can be judged from the fact that several frontline leaders belonging to the Indian National Army were imprisoned here by the British rulers during the Freedom Struggle.

Mosque at Wazirabad

This elegant mosque, also built during the reign of Firoz Shah Tughluq, is now a protected monument. This mosque has a rare feature of having a special gallery for ladies. The gallery is designed in such a way that veiled women could offer prayers without being seen by males.

Tomb of Shah Alam

This tomb is located in the courtyard of the mosque at Wazirabad. Shah Alam, a famous Sufi saint of the Tughluq period, is buried here. The architectural value of this protected monument has considerably reduced over the years due to the vanishing of beautiful Jalees which used to exist between its twelve columns.

Coronation Park

The white marble statue of King George V along with 4 others was installed in this park around 1960. The park is located in the vicinity of Kingsway Camp. This statue has been moved to the present spot from the canopy at India Gate.

Bridge Near Wazirabad

This exquisite monument of mediaeval period was built during the time of Firoz Shah Tughluq who ruled from Delhi during 1351-88. This bridge consists of nine bays, out of which, only five have survived the onslaught of time.

District : East

Mother Dairy

Mother Dairy located at Patpar Ganj (Tahsil Preet Vihar), the largest liquid milk plant in Asia (installed capacity - 8 lakh litres per day), was commissioned in 1974 as a wholly owned subsidiary of the National Dairy Development Board (NDDB). It was an initiative under Operation Flood, the world's biggest dairy development program launched to make India a milk sufficient nation. Over the years, Mother Dairy has contributed significantly in achieving this objective through a series of innovations and programs. Today, Mother Dairy manufactures markets & sells milk and milk products including cultured products, ice creams, paneer and ghee under the Mother Dairy brand. The Company also has a diversified portfolio with products in edible oils, fruits & vegetables, frozen vegetables, pulses, processed food like fruit juices, jams, etc. to meet the daily requirements of every household. Safal, F&V arm of Mother Dairy was the first Company to organize the fruits and vegetables business in India. Today Safal is the market leader in organized fruit & vegetable retail business in Delhi NCR and operates the largest number of F&V Stores in Delhi NCR and has significant presence in Bangalore. Safal was also the first brand in India to launch frozen vegetable in mid 90s. Over the years, the brand has gained significant customer support and has become a household brand with market leadership and presence across the country. Safal also has a prominent presence across 40 countries viz., USA, Europe, Russia, Middle East, Asia and Africa and exports Fresh Fruits & Vegetables (Grapes, Banana, Gherkin, Onion, etc.), Fruit Pulp & Concentrate, Frozen Fruits & Vegetables, etc. Mother Dairy is also present into edible oils segment under the brand name Dhara which was launched under the 'Operation Golden Flow' program of NDDB as a market intervention program to address a larger cause of the Indian farmers & consumers. Trust, Purity and Taste are the hallmarks of Dhara cooking oil.

Akshardham Mandir

The temple, which attracts approximately 70 percent of all tourists who visit Delhi, was officially opened on 6 November 2005 by Dr. A.P.J. Abdul Kalam. It sits near the banks of the Yamuna adjacent to the 2010 Commonwealth Games village in eastern New Delhi. The main attraction of the Swaminarayan Akshardham complex is the Akshardham Mandir. It rises 141-foot (43 m) high, spans 316-foot (96 m) wide, and extends 356-foot (109 m) long. It is intricately carved with flora, fauna, dancers, musicians, and deities. Designed in accordance with the standards of Maharishi Vastu Architecture, it features a blend of architectural styles across India. It is entirely constructed from Rajasthani pink sandstone and Italian Carrara marble. Based on traditional Hindu architectural guidelines (Shilpa shastras) on maximum temple life span, it makes no use of ferrous metal. Thus, it has no support from steel or concrete. The mandir also consists of 234 ornately arched pillars, nine domes, and 20,000 murtis of sadhus, devotees, and acharyas. The mandir also features the Gajendra Pith at its base, a plinth paying tribute to the elephant for its importance in Hindu culture and India's history. It contains 148 life sized elephants in total weighing a total of 3000 tons. Under the temple's central dome lies the 11-foot (3.4m) high murti of Swaminarayan seated in abhaya mudra to whom the temple is dedicated. Swaminarayan is surrounded by images of the faith's lineage of Gurus depicted either in a devotional posture or in a posture of service. Each murti is made of paanch dhaatu or five metals in accordance to Hindu tradition. The temple also houses the murtis of Sita Ram, Radha Krishna, Shiv Parvati, and Lakshmi Narayan. Akshardham or Swaminarayan Akshardham complex is a Hindu mandir, and a spiritual-cultural campus in New Delhi, India. It is the largest Hindu temple after the Akshardham in Gandhinagar both inspired and developed by Pramukh Swami Maharaj, the spiritual head of the Bochasanwasi Shri Akshar Purushottam Swaminarayan Sanstha, whose 3,000 volunteers helped 7,000 artisans construct the temple.

District : New Delhi
India Gate

This 42-metre high memorial arch was built to pay homage to the 90,000 soldiers of the Indian Army who died in World War I and names of 36,000 martyrs are inscribed on the arch. The foundation stone of this arch was laid in 1921 and the memorial was completed in ten years. An inverted rifle and a helmet over it stand at the centre and an eternal flame ('Amar Jawan Jyoti') burns in honour of the unknown soldiers.

Rashtrapati Bhawan and Central Secretariat

The Rashtrapati Bhawan and the Central Secretariat, the nerve centres of the Government of India, designed by Edward Lutyens and Charles Baker, are located in the Raisina Hill. They came up in the late 1920s. They dominate the acropolis of New Delhi and are easily one of the most impressive groups of State buildings in the world's capitals. Rashtrapati Bhawan is now the official residence of the President of India. It stands as an impressive symbol of imperial power with a magnificent stone dome towering above the central vista and visible for miles around. The palace and its grounds cover 330 acres. It is a complex of great courts, magnificent state rooms, stairways, fountains and gardens. On the western side, the palace overlooks a raised garden laid out in Mughal style. This Mughal Garden is one of the most beautiful gardens in Delhi. The garden is famous for its roses which bloom in winter and early spring. The Mughal Garden is open to the public during February and March every year. The Rashtrapati Bhawan is flanked by the North Block and the South Block in the Raisina Hill. The North Block houses the Union Finance and Home Ministries and the South Block the Union Defence and External Affairs Ministries as well as the Prime Minister's Office.

Parliament House

Located at the southern end of Parliament Street, this huge circular colonnaded building housing the Parliament was conceived in the same imperial style as the Rashtrapati Bhawan and the North and South Blocks. It was completed in 1927. It houses the Rajya Sabha (Upper House) and the Lok Sabha (House of the People). Parliament meets here for the Budget, Monsoon and winter sessions for a total of eight months in a year.

Jantar Mantar (Delhi Observatory)

Set within a garden of stately palms, this Observatory was built by Maharaja Jai Singh of Jaipur in 1719, when Delhi remained the capital of the Mughal empire. Jai Singh, a keen astronomer who studied Hindu, Muslim and European astronomical work, was entrusted by emperor Muhammad Shah with the task of revising the calendar and correcting the astronomical tables which were then in use. He observed the stars for seven years before embarking upon this stone structure. He discarded the usual brass instruments and built this large instrument complex on his own. The Observatory consists of the 'Samrat Yantra' which gives the suntime; the 'Jai Prakash' which shows the sun's position in the sky at the time of vernal equinox (March 21); the 'Ram Yantra' through which we can read the altitude and azimuth (vertical arc of sky from horizon) which correspond with the latitude and longitude on the earth; the 'Niyat Chakra Yantra' forming part of the 'Mishra Yantra', which shows the time at the Meridian of Greenwich (England), Zurich (Switzerland), Notoy (Japan) and Serichew (Pic Iceland of the Pacific) when it is noon in Delhi and the time in Delhi when it is noon in the above places; and the two pillars which enable us to know the shortest and longest days of the year.

District : Central

Lal Qila (Red Fort)

This magnificent fort, located near the river Yamuna, is the most important historical monument not only in Delhi but also in India. The construction of this fort was started in 1638 by Mughal Emperor Shahjahan following his decision to move his capital from Agra to Shahjahanabad (Delhi). This fort, twice as big as the Agra Fort, is spread over an area of 6 lakh Sq. Yards. The master builders of this fort were Hamid and Ahmad. The outer walls of the fort are covered with a succession of turrets, kiosks, domes, balconies, windows and perforated screens, which make the fort extremely picturesque. The fort was originally surrounded by a 25 yard wide and 10 yard deep moat. Inside the fort premises, there are innumerable gardens and fountains, with a canal flowing through each building known as the Nahar- I-Bahisht (Stream of Paradise). The fort houses a number of spectacular palaces, mosques, courts, etc. The main entrance to the fort, viz., the Lahori Gate, faces the city of Lahore (now in Pakistan). This gate with its side towers and imposing central archway has within it a long arcade with arched rooms on each side. This arcade was once the hub of activity where the court jewellers, goldsmiths, workers of art in enamel, carpet manufacturers, weavers of different varieties of rich silk, etc., were housed. The independent buildings inside the fort are interconnected.

Diwan-i-Aam (Hall of Public Audience) This is a colonnaded hall designed for ceremonial events, raised on a plinth and open on three sides to an adjoining courtyard. The walls are richly decorated with fine pietra dura from Italy. There is a marble canopy inlaid with precious stones known as the 'Seat of the shadow of God'.

Diwan-i-Khas (Hall of Private Audience) This hall is considered the most exclusive and sumptuous of all pavilions in the Lal Qila. It was used by the Emperor for discussing important matters pertaining to the State. It is here that the famous peacock throne, estimated at that time to be worth twelve million pounds sterling, stood. This throne beckoned travellers to India and eventually became a part of the booty which Nadir Shah carried off to Persia. Above the arches inscribed in gold are the ecstatic words of Emperor Shahjahan - "If on earth there be a paradise of bliss! It is this, oh ! it is this. It is this".

Moti Masjid This mosque, designed by Aurangzeb for his personal use, is one of the finest Mughal architectural pieces. The emperor could say his prayers at the five ordained times of the day in this mosque without having to proceed each time to the Jama Masjid.

Mahals The other monuments inside the 'Lal Qila' that deserve a mention are the Rang Mahal (Palace of the Begums), the Khas Mahal (Personal Palace of the King), the Hammam (Royal Bath) and the Naubat Khana (Hall of Music).

Museums The Lal Qila also houses two Museums. The Indian War Memorial Museum, containing stamps, photos, coins and armoury, is located in the second storey of Naubat Khana; the Delhi Museum, situated on the south of Rang Mahal, has some rare specimens of ancient manuscripts, pictures, dresses, swords, etc., of the Mughal era. The Lal Qila is also the venue for the Independence Day celebrations. The twelve metre high defensive barbican in front of the fort was built by Aurangzeb, who objected to the clear view into the palace through the open gates. Since 1947, it is from the rampart of this barbican that the National Flag is unfurled every year on the Independence Day (August 15).

Jama Masjid

Located opposite Lal Qila, Jama Masjid or the Congregational Mosque was built by Shahjahan in the 1650's at a cost of Rs.10 lakhs for the city of Shahjahanabad. It is the largest mosque in India where

20,000 people can offer prayer at one time. The symmetry and harmony of the building is a tribute to the architectural skill of those days. The architect of this grand mosque was Ustad Khalil. Built on a raised plinth, it has three imposing gateways approached by long flight of steps and its prayer hall flanked by a four-storeyed minaret at either end and covered by three large domes ornamented with alternating stripes of black and white marble. It is believed that one prayer at Jama Masjid is equivalent to 23 prayers offered at home.

Fatehpuri Masjid

This renowned mosque of Shahjahanabad, located on the western side of Chandni Chowk, is one of the most revered and distinguished mosques in the city, the other being the Shahjahani Jama Masjid. This mosque was built at a cost of Rs. 1.5 lakh by Fatehpuri Begum, wife of Emperor Shahjahan, in 1650. It consists of a dome and four big minarets, each measuring 35 yards, seven bays and a central tank, measuring 42 x 22 yards, besides single and double storey apartments. It is a rare piece of Mughal architecture built in red sand stone.

Gurdwara Sis Ganj

This large three-storeyed rectangular Gurdwara is located in Chandni Chowk. It is one of the three most famous and religiously important places of worship of the Sikhs. This Gurdwara was built in memory of Guru Teg Bahadur in 1675. The decorative features of this impressive Gurdwara are its Jalees, Chatrees and Jharokas. The main dome of the Gurdwara has been covered with Golden Patra.

Gateway of Zeenat Mahal

This beautiful Mahal was basically the haveli of Begum Zeenat, the favourite Queen of the last Mughal Emperor Bahadur Shah Zafar. This Mahal, constructed with Lahori bricks, is located in Lal Kuan. It consists of several Jharokas and pointed arches. At present, a Government Girls School functions here.

Shri Aggarwal Digamber Jain Panchayati Mandir

This Jain temple was built in 1745 and is managed by a Public Trust. It is located in Dharam Pura locality of Chandni Chowk. The temple has Shahjahani columns in marble, a sand stone gateway, impressive wall paintings and a high dome.

Shri Digamber Jain Lal Mandir

This two-storeyed Jain Temple, built around 1807, is also situated in Dharam Pura locality of Chandni Chowk. It is an excellent example of craftsmanship with marble-pillared hall and exquisite wall paintings.

Sunehri Masjid

Built in 1751 by Quadsia Begum, the mother of Ahamad Shah, this elegant mosque is situated outside the Delhi Gate of Red Fort. It is one of the most beautiful remnants of Shahjahanabad. The Masjid derives its name from the golden colour of its tomb. It consists of three-domes and two minarets.

Ajmere Gate

This imposing Gate is one of the four surviving main gates out of fourteen such Gates of Shahjahanabad. This single-arched gateway was built during 1644-49. Its archaeological significance is its niches and conch battlement, a hallmark of all Mughal buildings. This Gate is named Ajmere Gate as the road outside this gate connects Delhi with Ajmer (Rajasthan).

Chandni Chowk

This street is undoubtedly one of the most significant streets in the world in many ways. Its unique feature is not its grandeur and hustle and bustle only but also the unique fact that dozens of religious places belonging to all communities of the country are located in this area. Republic Day Parade contingents pass through Chandni Chowk. The headquarters of the Municipal Corporation of Delhi functions at the Town Hall which is also located in this area. The religious places located in the area include Fatehpuri Mosque, Sunehari Masjid, Gurdwara Sis Ganj, St. Stephen's Church, Bhairon Temple, Jain Temple, Diwan Hall, etc.

District : West

Central Jail, Tihar

Tihar Prisons, also called Tihar Jail and Tihar Ashram, is a prison complex in India and the largest complex of prisons in South Asia. Run by Department of Delhi Prisons, Government of Delhi, the prison contains nine central prisons, and is one of the two prison complexes in Delhi, along with a district prison at Rohini Prison Complex. It is located in Tihar village, approximately 7 km from Chanakya Puri, to the west of New Delhi, India. The surrounding area is called Hari Nagar. The prison is styled as a correctional institution. Its main objective is to convert its inmates into ordinary members of society by providing them with useful skills, education, and respect for the law. It aims to improve the inmates' self-esteem and strengthen their desire to improve. To engage, rehabilitate, and reform its inmates, Tihar uses music therapy, which involves music training sessions and concerts. The prison has its own radio station, run by inmates. There is also a prison industry within the walls, manned wholly by inmates, which bears the brand Tihar. Tihar jail has approx 10 thousand inmates against the sanctioned capacity of 5,200. Originally, Tihar was a maximum security prison run by the State of Punjab. In 1966 control was transferred to the National Capital Territory of Delhi. Beginning in 1984, additional facilities were constructed, and the complex became Tihar Prison. Under the charge of Kiran Bedi, when she was Inspector General of Prisons, she instituted a number of prison reforms at Tihar, including changing its name to Tihar Ashram. She also instituted a Vipassana meditation program for both staff and inmates; initial classes were taught by S. N. Goenka. The Prison has also produced an inmate who has passed the Indian Administrative Service civil service examinations. Many of the inmates continue their higher education through distance education. The campus placement programme was launched in 2011 for the rehabilitation of inmates about to complete their sentences.

District : South-West

National Physical Laboratory (NPL)

The National Physical Laboratory (NPL), located in the PUSA complex, is one of the constituent laboratories of the Council of Scientific and Industrial Research (CSIR). Founded by Pt. Jawaharlal Nehru on January 4, 1947, the laboratory was inaugurated by Sardar Vallabhbhai Patel, the then Dy. Prime Minister of India on January 21, 1950. The main objectives of the NPL are to establish, maintain and improve the National Standards for all physical parameters and realize the “Units” based on International Systems. The laboratory undertakes research in various areas of Physics which are most appropriate to the needs of the nation and for advancement of the field. The laboratory also assists industries and other agencies in their developmental tasks by providing precision measurements and calibration services. It calibrates the standards of measurements for the Department of Weights and Measures of every State in India. The NPL has successfully transferred several technologies useful to industry and to other agencies in India and abroad. The NPL is the custodian of National Standards of Measurements traceable to International Standards, a statutory task assigned to the organization. The standards of measurements maintained by the NPL are periodically compared with those established at the International Bureau of Weights and Measures in Paris (France). The NPL has realized units of Length, Mass, Time Electric Current, Voltage, Resistance, Temperature and Luminous Intensity. Besides, the NPL is engaged in advanced research and development in the areas of Electronic and Engineering materials, Material Characterization, Radio and Atmospheric Sciences, Superconductivity and Cryogenics.

Indira Gandhi International Airport

Indira Gandhi International Airport serves as the primary civilian aviation hub for the National Capital Region of Delhi, India. The airport, spread over an area of 5,106 acres (2,066 ha), is situated in Palam, 15 km (9.3 mi) south-west of the New Delhi railway station and 16 km (9.9 mi) from New Delhi city centre. Named after Indira Gandhi, a former Prime Minister of India, it is the busiest airport in the country in terms of passenger traffic since 2009. It is the second busiest airport in the country in terms of cargo traffic after Mumbai. With the commencement of operations at Terminal 3 in 2010, it became India's and South Asia's largest aviation hub, with a current capacity of handling more than 40 million passengers. The airport was operated by the Indian Air Force before its management was transferred to the Airports Authority of India. In May 2006, the management of the airport was passed over to Delhi International Airport Limited (DIAL), a consortium led by the GMR Group. In September 2008, the airport inaugurated a 4,430 m (14,530 ft) runway. The Terminal 3 building, which commenced operations in 2010, has a capacity to handle 34 million passengers annually. Terminal 3 is the world's 8th largest passenger terminal. The airport uses an advanced system called Airport Collaborative Decision Making (A-CDM) to help keep takeoffs and landings timely and predictable.

District : South

Humayun Tomb

Humayun's Tomb is the most splendid example of Mughal architecture with high arches and a double dome. This beautiful Tomb, located near Nizamuddin East, was built by Humayun's widow Haji Begum in memory of her husband in 1565. It is considered to be a forerunner to the Taj Mahal. It is located close to Hazrat Nizam-ud-din Aulia. It is also the final resting place of Haji Begum herself as also of the headless trunk of Dara Shikoh, Emperor Jahander Shah Farruqh Shiyar, Rafi-ud-darajat and Rafi-uddaulad and Alamgir-II. Humayun's Mausoleum stands at the centre of the garden. It is the first example of a tomb surrounded by beautiful gardens and lawns from all sides.

Dargah Hazrat Nizam-ud-din Aulia

The Dargah is situated in Nizamuddin village. It is the resting place of Hazrat Nizam-ud-din Aulia, the fourth in the line of the Chisti Saints of great repute who died in 1325. The Dargah is also the resting place of some of the famous men and women of the Indian History, viz., Jahanara Begum (daughter of Mughal Emperor Shahjahan), Atgah Khan, Mirza Aziz Koklatash, Emperor Muhammad Shah, Mirza Jahangir (son of Akbar-II), Zia-ud-din-Barni and the well-known Urdu poets Mirza Ghalib and Amir Khusro. This Dargah of religious importance is visited by thousands of devout pilgrims not only from different parts of India but also from Pakistan and other countries. It is also the venue of the Urs, the annual religious festival of the Muslims.

Tughluqabad Fort

Located on Qutb-Badarpur Road, the fort is the 3rd city of Delhi built by Ghiyas-ud-din Tughluq as his capital. Although nothing remains except the bastioned walls and some underground chambers, the thirteen lofty gateways, three-storeyed towers and the remnants of the massive ramparts still give it an air of lonely grandeur and project the personality of the warrior king. The tomb of Ghiyas-ud-din Tughluq lies across the main entrance of the fort. Due to shortage of water, Tughluqabad became a ghost city 15 years after its construction.

Qutb Minar

Qutb Minar, the 13th Century tower, an architectural warden and the glory of India dwarfing all other monuments in Delhi, is 72.5 metre high with 378 steps. The base diameter of the Minar is 14.32 metres which tapers to mere 2.75 metres at the apex. Historians claim that this Minar is the work of Qutbud- din Aibak, the first Muslim Sultan of the slave dynasty, who is said to have started its construction around 1200. Probably, he could get only the basement storey completed. Qutb Minar has five storeys, the first three of red sand stone and the top two storeys of marble and sandstone. The inscriptions of the first storey bear the name of Qutb-ud-din Aibak while the second, third and fourth storeys bear the name of Iltutmish, his son-in-law and successor of Qutb-uddin Aibak. Thus, it is presumed that Aibak built the first storey and Iltutmish carried the project further adding three more storeys. Firoz Shah Tughluq (1351- 88) added the fifth storey and surmounted it with a harp shaped cupola, which was destroyed in an earthquake in the early part of the 19th century. The summit of Qutb Minar is surmounted by a simple iron railing today. As regards the origin of Qutb Minar, controversies exist. According to some, the Minar was originally known as Vijay Stambh, which was built by the last Hindu King Prithvi Raj Chauhan to enable his daughter to have a view of River Yamuna from its top but later on Muslim conquerors altered the structure and completed it in their own style.

Iron Pillar

In the courtyard of Quwwat-ul-Islam Mosque at the base of Qutab Minar stands the famous iron pillar. The pillar is believed to have been made of pure malleable iron which has not rusted over the years.

Shamsi Talab and Jahaz Mahal

It is a terraced garden on the outskirts of Mehrauli village along a water reservoir built in 1230. A canopy is built over a faint footprint said to be that of the Prophet. A mango grove nearby makes this a good picnic spot. In the Shamsi Talab is the Jahaz Mahal, a grey and red sandstone structure, afloat on water. This small monument is the venue for the famous annual festival of 'Phoolwalon-Ki-Sair' (a procession of flower sellers), a cultural event organized in October every year, which marks the communal harmony.

Hauz Khas

Located south of Green Park, this picturesque picnic spot takes its name after the vast reservoir built by Alaud-din Khalji to meet the water needs of his city of Siri. Adjacent to the reservoir is a Madarassa built by Firoz Shah. The Madarassa is so designed that it is cool in summer and warm in winter. A deer park is also located nearby.

Kalkaji Temple

Located south of Nehru Place and adjacent to Kalkaji, the temple, built in 1764, is dedicated to Goddess Kali. This is a very old temple and worship of Kali Devi dates back to the time of Raj Pithora.

Baha'i House of Worship (Lotus Temple)

The design of the Baha'i House of Worship is inspired by Lotus, the exquisitely beautiful flower and a symbol of purity, which is associated with worship and religion in India. This lotus-shaped temple is surrounded by nine large pools of water which not only enhance its beauty but also play a significant role in the natural cooling system of the temple.

10(ix) Major characteristics of the districts, contribution in the form of any historical figures associated with the district.

Delhi has contributed a lot from the historical point of view. As stated earlier, Delhi remained a uni-district territory at the time of 1991 Census. It was bifurcated into 9 districts, viz., North-West, North, North-East, East, New Delhi, Central, West, South-West and South, in 1997. Basically, these newly created districts are more or less administrative divisions. An attempt has, however, been made to list out some of the important characteristics of each district in the following paragraphs:

North-West:

As its name indicates, the district is located in the north-west of Delhi and is surrounded by two States, viz., Haryana and Uttar Pradesh. Out of the total 112 villages in the UT, majority of 52 villages are located in this district. 33 Census Towns, which are basically villages from the revenue point of view, are also located in this district. As such, this district is dominated by a rural flavour. A number of persons hailing from this district serve in the armed forces. The district has produced legends of valour and bravery. This is the biggest district of Delhi. Rohini, one of the biggest residential colonies of Asia, is located in this district. Village Jaunti where Shikar Garh fort, known for its archaeological

importance is located, falls in this district. In the wake of the shifting of industries from Delhi city to free the city from environmental pollution, the Bawana Industrial Complex has come up in this district. An LPG plant functions in village Gheora which lies in this district. Two major National Highways NH-1 and NH-10, pass through this district.

North:

The district is bounded by river Yamuna in its east and north-eastern sides. The district has earned a prominent and distinguished place in the cultural, historical and political map of Delhi. The great architect of the Indian Constitution, Dr. Baba Saheb Bhim Rao Ambedkar, and the great British Administrator, General Metcalf, used to live in the Civil Lines area of the district. A number of places of historical and archaeological importance are located in the district, which include Dr. Ambedkar National Memorial, Delhi Vidhan Sabha and Delhi Old Secretariat. The North Campus of the University of Delhi is located in this district. The famous Salim Garh Jail is also located in this district where the notable functionaries of the Indian National Army were imprisoned by the British during the Freedom Struggle.

North-East:

North-East district across river Yamuna is bounded by Uttar Pradesh. The district does not have any importance from the historical/archaeological point of view. However, an erstwhile town of Delhi, i.e., Shahdara, lies in this district. The district has in its fold congested roads, unauthorised and resettlement colonies, etc. As such, it has recorded the highest density of population in the State in the 2011 Census although in terms of area, it occupies the sixth place. Due to resettlement/unauthorised colonies, it has also recorded the least literacy rate in Delhi. This is the first district in Delhi to have the Metro Rail which runs from Shahdara (North-East district) to Tis Hazari (North district).

East:

East district also lies across river Yamuna and touches the boundaries of Uttar Pradesh. Among the two districts of Trans-Yamuna area, this district has posh areas/colonies. One of its tahsils, viz., Vivek Vihar, is totally urban. This district has a number of residential flats of multinational companies, Government employees and news-paper establishments. The district has the highest number of literates amongst all the nine districts of Delhi. It has a flourishing business centre of readymade garments. One of the world's largest liquid milk plants handling over 800,000 liters of milk per day and one of the successful public enterprises of India, viz., Mother Dairy, is also located in the district.

New Delhi:

New Delhi district is located in the heart of Delhi. It is quite popular as a majority of VIPs/VVIPs have their office and residence here. The Diplomats Enclave and Embassies are also located in this district. A majority of national and international events are held in this district. Vigyan Bhawan, the venue of International and National level Conferences, is located here. Connaught Place 'the heart of NCT of Delhi' is one of the most important commercial centres of the country where the headquarters of various Indian as well as Multi-national companies, financial institutions, banks, insurance companies, etc., are located. From the days of the British, it has remained the most fashionable shopping centre and it maintains the same glory even today. The Rashtrapati Bhawan, North and South Blocks housing the Union Finance, Home and Defence Ministries as also the Prime Minister's Office, Parliament House, India Gate, Supreme Court, High Court of Delhi and the Office of the

Registrar General, India are located in this district. Jantar Mantar, Laxmi Narain Mandir popularly known as the Birla Mandir, Rail Museum and the National Museum are also located in this district.

Central:

The district covers a major part of the walled city from south-west part of Jama Masjid and traverses through Karol Bagh upto Rajendra Place. It covers a major part of the erstwhile Shahjahanabad. As such, important monuments/heritage buildings and landmarks like Lal Qila, Jama Masjid, Delhi Gate, Ajmeri Gate, etc., are located in this district. About 400 listed monuments comprising mosques, temples, graveyards, havelies, baolis, etc., are located in this district. Nai Sarak, famous for sale of old and new school/college books, is located here. The district also has the unique distinction of mixed culture as within the walled city, traditional lifestyle as prevalent in the seventeenth century could still be seen. On the western side of river Yamuna, Samadhis/Memorials of the Father of the Nation (Mahatma Gandhiji), former Prime Ministers of India Pandit Jawaharlal Nehru, Lal Bahadur Shastri, Smt. Indira Gandhi, Ch. Charan Singh, Rajiv Gandhi, former Dy. Prime Minister Chaudhury Devi Lal are located. Chandni Chowk market, known for clothing material and electrical/electronic goods, is located in this district. The famous exclusive birds' charity hospital is also situated in this district. Besides, Karol Bagh, famous for its posh shopping centre falls in this district.

West:

This is the fourth largest district in terms of area. A number of residential colonies and shopping complexes are located in this district. Azad Hind Gram (village Tikri Kalan) where Netaji Subash Chandra Bose delivered a speech during the Freedom Struggle falls in this district and it is a tourist place of historical importance. The National Highway (NH-10) from Delhi to Ferozpur border Punjab passes through this district. A largest Rehabilitation Camp of 1984 Riotaffected people is located in this district. The largest complex of prisons in South Asia viz., Central Jail, Tihar, is located in this district. The Delhi Milk Supply Plant is also located in this district.

South-West:

This is the second largest district in terms of area. Like North-West district, this district also has a rural flavour. Out of the 112 villages in the NCT of Delhi, 41 fall in this district. A large area of this district is rocky as the southern ridge passes through it. Najafgarh Drain falling in Najafgarh tahsil is a very important water body covering in its catchment Najafgarh Jheel, which has of late, become dry to a large extent. Dwarka comprising a large number of housing colonies is located in this district. The National Physical Laboratory (NPL), one of the constituent laboratories of the Council of Scientific and Industrial Research (CSIR) and the famous Indira Gandhi International Airport are also located in this district.

South:

South district has inter-state boundary with Haryana on the southern side. It is the third largest district in terms of area. The district has vast extents of land declared as Reserved Forest. The famous Siri Fort Auditorium, India International Centre and India Habitat Centre, the venues for various national/international cultural events and film festivals are located in this district. The yearly cultural fest 'Phool Walon Ki Sair' organised in October in Mehrauli in this district is very significant from the point of view of communal harmony. Ancient temples/monuments viz., Kalkaji Temple, Dargah Hazrat Nizamuddin as also the Baha'i House of Worship popularly known as the Lotus Temple, and the ISKCON Temple are situated in this district. From the medical view point also, the district is famous as prominent hospitals of international repute like the All India Institute of Medical Sciences (AIIMS), Apollo Hospital and Escorts Heart Institute, are situated in this district.

10(x) Scope of Village Directory and Town Directory

Directory:

For the NCT of Delhi, the DCHB of Census-2011 is being brought out in two volumes i.e. Parts A (Village and Town Directory) and Part B (Primary Census Abstract). The Census and the Non-Census data in these publications are presented C.D. Block wise in respect of each district in the case of rural areas and town-wise in the case of urban areas.

Village Directory:

The Village Directory is one of the traditional compilation of Census. It presents very useful non-census data in respect of each inhabited village. Village information like location particulars, name and area of the village are provided in column no. 1 to 3 for uninhabited villages also. The Village Directory format has 122 columns, which provide following information:

Columns 2&3 give name and location particulars of the village. The location code is useful for identification of the village and its higher geographical/administrative units. Name of the village as available in the Revenue records is also given in Column 2. Columns 4 to 6 provide total area of the village in hectares, its population and number of households as per Census 2011. Column 7-20 present the data on Educational amenities. In case any amenity is not available within the village, the distance range code viz; a for < 5 Kms, b for 5-10 Kms and c for 10+ kms from nearest place where facility is available is given. This will help to locate the area where the basic amenity/amenities are available so that proper developmental planning can be made. It will in turn facilitate removal of regional imbalances in the matter of development. The type of different educational facilities available in the village is given in numbers. Both Government and private educational facilities / institutions are considered for this-purpose. If there are composite schools like Middle schools with Primary classes, or Secondary schools with middle classes, these are included in the number of Primary and Middle schools respectively. For example, if in a village there are two Primary schools and one Middle school with primary classes, the number of Primary schools in the village are given as three and that of Middle school as one even though there may be only three educational institutions. So also in case of Secondary Schools. The description of Educational Amenities shows in are depicted here under: Pre-primary (PP), Primary School (P), Middle School (M), Secondary School (S), Senior Secondary School (SS), Degree College: (i) Arts/Science/Commerce(ASC) (ii) Engineering College (E) (iii) Medical Colleges, Management College/ Institute (MI), Polytechnic (Pt), Vocational School/ITI, Non-formal Education/Training Centre (NFTC), Special School for Disabled (SSD).

In column 21-31, information regarding medical/health facilities are given. The columns indicates the Community Health Centre (CHC), Primary Health Centre (PHC), Primary Health Sub- Centre (PHS), Maternity and Child Welfare Centre (MCW), TB Clinic (TBC), Hospital-alternative medicine (HO), Dispensaries (D), Veterinary Hospital, Mobile Health Clinic, Family Welfare Centre. In case of hospitals and dispensaries, they are break-up along with the system of medicine viz., Allopathic, Ayurvedic, Ayurveda, Unani and Homeopathic. In case any amenity is not available within the village, the distance range code viz; a for < 5 Kms, b for 5-10 Kms and c for 10+ kms from nearest place where facility is available is given.

In column 32-38, number of Non-Government medical amenities like Nursing Home, Medicine Shop, registered medical practitioners, etc available within the villages are given.

Column 39-46 give information regarding availability of drinking water (Yes/No) within the village, and same is depicted under Tap Water-treated, Tap Water-un-treated, Covered Well (CW), Un-covered Well (UW), Hand Pump (HP), Tube Well / Borehole (TW), Spring, River/Canal, Tank/Pond/Lake.

Column 47-50, give information regarding availability of toilet & others (Yes/No) within the village.

And, same is depicted under community Toilet Complex, Rural Sanitary Mart or Sanitary Hardware Outlet (RSM), Community bio-gas or recycle of waste for productive use

Column 51-59 provide information pertaining to Communication and transport facilities of Post Office (PO), Sub Post Office (SPO), Post & Telegraph Office (PTO), Village Pin code, Telephones (landlines), Public Call Office (PCO)/Mobile PCO, Mobile Phone Coverage, Internet Cafes/Common Service Centres (CSC), If amenities available code -Yes is given except for Village Pin Code, If not available within the village, the distance range code viz; a for < 5 Kms, b for 5-10 Kms and c for 10+ kms from nearest place where facility is available is given.

Column 60-67, provide information regarding availability of public transport viz., bus service, railway station, Auto/Modified Autos, Taxi and Vans, Tractors, Cycle-pilled rickshaws, Carts driven by animals, Sea/river ferry service.

Column 68-71 give the status whether village is connected to National Highway (NH), State Highway (SH), Major District Roads (MDR), Other District Roads (ODR). And Column 72-76 give the roads status whether the village is approachable both in fair and foul weather. Road status in village like Black-Topped (Pucca) Road, Gravel (Kuchha) Road, Water Bound Macadam (WBM), Foot Path (FP), navigable waterways also listed. If amenities available code -Yes is given, If not available within the village, the distance range code viz; a for < 5 Kms, b for 5-10 Kms and c for 10+ kms from nearest place where facility is available is given.

Columns 77-79 provide information regarding availability of Commercial & Co-operative banks, ATM, Agricultural and non-agricultural credit societies facility in the village.

Column 80-97 presents availability of miscellaneous facilities viz. Self-help Group (SHG), Public Distribution System (PDS) shop, Mandis/Regular Market, Weekly Haat, Agricultural Marketing Society, Nutrition Centre (Integrated Child Development Services (ICDS)), Anganwadi Centre, Accredited Social Health Activist (ASHA), Sports Club/Recreation Centre, Cinema/Video Hall (CV), Public Library, Public Reading Room, Newspaper Supply, Assembly Polling station and Birth and Death Registration Office. (If amenities available code -Yes is given, If not available within the village, the distance range code viz; a for < 5 Kms, b for 5-10 Kms and c for 10+ kms from nearest place where facility is available is given).

Column 98-101 present the use and availability of electricity in the village (Yes/No) under column heading Power Supply for domestic use, Power supply for agricultural use, Power supply for commercial use, Power supply for all uses.

Columns 102 to 114 give details of the pattern of land use. First two columns 102 & 103 shows the nearest town name and distance from the village. Columns 104-114 show land use pattern under the 9 categories as indicated in the Village Directory viz., forest, irrigated/un-irrigated lands and Columns 115 to 119 give details of area irrigated by source (in hectare) viz. Government canal, private well, well with or without electricity, tube well with or without electricity, tank, river, lake and waterfalls.

Column 120-122, give the details of three most important commodities manufactured in the village.

Town Directory:

Town Directory is presented for each town covering different aspects of urban areas. It has Statements I to VII. Data regarding civic and other amenities in the notified slums is being presented in Statement VII in DCHB 2011. The data for each Census Town is also presented in these Statements although they do not enjoy urban civic status. The towns within each district are arranged in alphabetical order.

Statement I is regarding status and growth history of the town. The data in this Statement has been presented in 25 Columns. Column 2 provides information regarding class, name and civic status of the town. Location code of the town and name of its tahsils/community development block are given in Column 3 to 5 to help in identifying all the geographical units of the town. Column 6 presents the area of the town in hectares. Column 7 presents the number of households, including houseless households. Column 8-9 present Schedule Caste and Schedule Tribe population respectively. Columns 10 to 21 give the population and growth rate of the town from 1901 to 2011 to help in drawing the trends of population growth. Density of the town and sex ratio for 1991 to 2011 Censuses have been presented in Columns 22 to 25.

Statement II depicts the physical aspects and location of the town in 2009. Against physical aspects, data regarding rainfall and temperature (minimum and maximum), provided by the Meteorological Department, are presented in Columns 3 to 5. Against Name of the Road distance (in Km.) from, the State HQ, District HQ and Tahsil headquarters, from the nearest city with population of one lakh and more and the nearest city with population of five lakh and more has been provided in columns 6 to 10. This is to help in determining the location of the town. Information regarding communication facility like railway station, bus service are given in columns 11 to 12.

Statement III deals with the municipal finance for all the statutory towns/non-statutory towns managing civic administration. For Delhi, this information is being presented for three statutory towns only.

Statement IV provides information regarding civic and other amenities in the towns. Columns 4 to 7 give information on system of drainage, Columns 8 to 11 give information on number of latrines and method of disposal of night soil. The information is given in abbreviations, the full forms of which have been explained at the beginning of Town Directory. Availability of improved water supply to the inhabitants of the town is given in columns 12 and 13. Column 14 gives information regarding availability of fire fighting service. In case a facility is not available in the town, the name of the nearest town where the facility is available is given with the distance in kilometres indicated in brackets. Columns 15 to 19 pertain to the number of domestic, industrial, commercial electric light connections and Road lighting points etc.

Statement IV gives information regarding availability of Medical facilities. In case of medical facilities, apart from the number of hospitals/dispensaries, the numbers of beds available in these institutions are given. The breakup of hospitals along with the system of medicines, viz., allopathic, ayurvedic, unani and homeopathic, are given in Columns 3 to 12. Data regarding Charitable Hospital/Nursing Home (Numbers), Medicine Shop (Numbers) are given in Columns 13 and 14.

Statement V presents Educational, Recreational and Cultural Facilities. The data on different types of educational institutions, viz., colleges offering different streams (including medical and engineering), schools from primary to senior secondary level, adult literacy centres etc., are provided in columns 3 to 15. No. of Orphanage Home, Working women hostels, No. of Old Age Home are given in columns 16 to 18. Columns 19 to 23 give recreational and cultural facilities available in the town. Stadia,

cinema halls, auditoriums, community halls, public libraries and reading rooms are covered in these columns.

Statement VI presents information in respect of trade, commerce, industry and banking services in the town. Information regarding three most important commodities exported and manufactured is given in columns 3 to 5. Information on number of banks and agricultural/non-agricultural credit societies in each town are presented in columns 6 to 10.

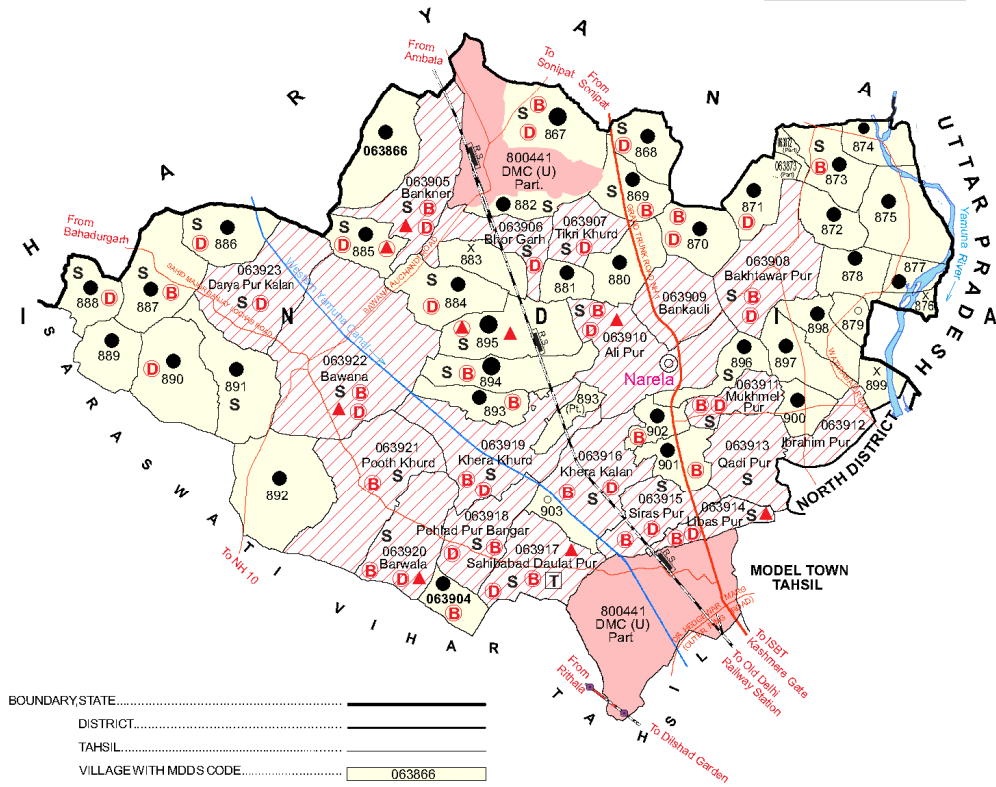

Statement VII provides data in respect of civic and other amenities in the notified and recognised slums.
